STRUGGLING ON

After abandoning the ship you capture an ADREC in order to continue advancing on the planet.

A dagger is the sole weapon you rely on to fend off the inhabitants. You fight against the enemy troops. You have to steal a weapon. And advance forward, straight ahead. Nothing can detain you.

THE PRISON

You cross swamps, mountains and forests... there are enemies all over. The way to the prison becomes more hazardous the further you advance. You take command of a helicopter, descend into the entrails of the planet, and arrive at the prison. It is heavily guarded. Will you be capable of freeing ARKOS?

39 ACTION TEST BEGINS WITH THE EMPIRE STRIKES BACK

The second of the *Star Wars* trilogy provides the opening to this month's action-packed bumper instalment of CPC activity.

40 GAME OVER II

Dinamic proudly present the sequel to... that's right, *Game Over!* They've had second thoughts about the dubious advertising, however - and decided to use it a

No business like show business...

So that was the 1988 PC Show. We've a special report in *Amscene*, with photos and details of the most important new games releases coming up for the Christmas rush.

And then there was Amstrad's new machine - 'The Sinclair Professional Series PC200' (bit of a mouthful, huh?). You'll find the details inside, but in short it's a low-cost PC compatible that's going to be sold (or not, as the case may be) on the claim that, 'It's both a games machine and a serious machine'.

Ring a bell? Yes of course it does! It's the CPC story, all over again. The image we're to form in our supposedly gullible minds is of the computer that gets its joystick wagged all day and its keypad bashed all night, as junior gives way to parent home from a busy day at the office.

But hang on a minute: is it really a games machine? Four colours? Hopelessly inadequate sound? It seems to us that anyone who's serious about games knows already that the low end of the PC range isn't the place to go for a good waggle.

So the verdict on Sugar's latest enterprise must remain, at least for the time being, 'Not proven'.

Steve

43 THE TRAIN

Accolade steam in with a wartime simulation cum shoot-em-up that chugs along at a fair old rate.

44 ALSO IN ACTION TEST THIS MONTH:

Vindicator, GM Chess, Gold Silver and Bronze, Metaplex, Roadblasters, Thing and Vectorball.

68 PILGRIM

The caped crusader lays down his staff for another instalment in the annals of AA adventuring. Two big releases this month: Level 9's *Ingrid's Back* and *Lancelot*.

NOW WITH STOP PRESS, EVERYONE CAN HOLD THE FRONT PAGE NEWS.

STOP PRESS

'STOP PRESS' is the ideal DeskTop Publishing program for home enthusiasts, schools, societies and small businesses. 'STOP PRESS' makes it simple to create professional newsletters, leaflets, forms and flyers, in fact anything where text and graphics are required — placing you right at the heart of the DeskTop Publishing Revolution.

Text can be entered from within 'STOP PRESS' or imported from your word processor with fully automatic on screen text formatting including centering, ragged right and literal justification.

The graphics capabilities of 'STOP PRESS' are equally versatile. The ability to import digitised and scanned images is complimented by facilities for drawing, spraying and painting.

Enhanced cut and paste facilities replace traditional methods (no scissors and glue supplied or required).

'STOP PRESS' includes an excellent zoom facility for adding those finishing touches before your work is output to a wide range of Epson compatible dot matrix printers.

EXTRA, EXTRA

Extra, Extra is a collection of instant clip art and new

typefaces covering a variety of subjects and styles.

AMX MOUSE

Stop Press can be used with a joystick or keyboard but the

AMX Mouse gives you the control and flexibility which you would expect from the most accurate pointing device available.

Established as the market leader the AMX Mouse has been the driving force behind a whole host of new applications from other software houses. With its unique design and high resolution movement the AMX Mouse is a must.

AMSCENE

PC Show 88 special – including the new PC200!

Amstrad launch new range

Amstrad have launched a new range of 'games/business' machines, the 'Sinclair Professional series PC200'.

The news came at a press conference immediately prior to the PC Show, held at Earls Court last month. The Show was the press and the public's first opportunity to see the range in the plastic, as it were. (A piece had already broken off the model your correspondent saw on the morning of the first day of the show – before the public had even been admitted!)

The selling pitch is that 'it gives you the best of both worlds – IBM-PC compatibility unlike any other home computer and an edge for games you won't find on any other PC, thanks to the built-in colour TV interface'. The generally low-key announcement of the machine at the Amstrad press conference, however, and its lukewarm reception by the gathered pundits and industry commentators, suggests that it is not the world-beater Amstrad must have been aiming for. And the launch of the machine as a Sinclair may further weaken its impact, for the title – bought lock, stock and barrel from Sir Clive – still conjures images of the wretched C5 and the like.

Spec/tackle

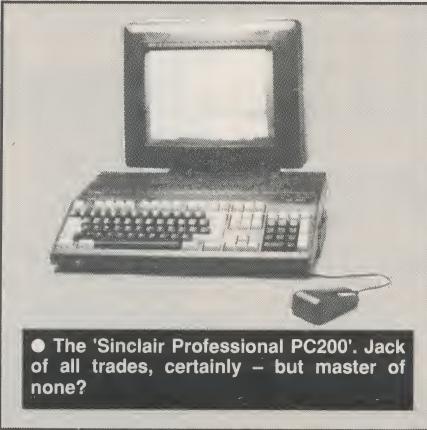

For the technically minded, here's what you get:

- 512K RAM
- CGA graphics,
- built-in modulator for use with TV,
- AT type keyboard,
- single 3.5 inch disk drive,
- expansion socket for 5.25 inch or 3.5 inch floppy disk drive,
- joystick port.

The machine comes with a mouse, Microsoft MS-DOS (a disk operating system very similar to, but not compatible with, CP/M), GWBASIC, GEM-3 (a disk handling suite) and GEMPaint (a graphics drawing system).

PC200 price list

without monitor	£343
with mono monitor	£458
with colour monitor	£573
– all three prices include VAT	

The Amstrad sales pitch attempts to present the PC200 as both a games machine and a serious machine (now where have we heard that before?). First impressions, however, are of something that is neither. Its four colours and poor sound ('beep') are what prevented the PC from ever being a world-beating games machine, while its decidedly modest processing power will not appeal to many business users out shopping for a 'serious' computer.

On the other hand, there is a huge library of PC software – the biggest of any machine ever – and the 3.5 disk format is set fair to become the industry standard for both games and serious software. And since it's often the breadwinner of the household who actually forks out the readies for a computer, a machine that can run PC software may be attractive.

One of the cleverest features of the PC200 is its expandability. The lack of expansion slots on the Amstrad PPC – a 'portable' ('luggable' would be more accurate) PC – have seriously hampered its success, and Amstrad have avoided repeating that mistake. The new machine features two easily accessible PC-standard slots for such things as a 20Mb hard card and 64 colour Enhanced Graphics Adaptor. (The only problem is that fitting full-length cards prevents you from closing the 'door'!).

The machine is expected to be available immediately – exclusively through Comet. It is believed this is the first time Amstrad has gone in for such a peculiar

New CPC launch

The announcement was made at the PC Show of the 'Amstrad Entertainment Centre'. The package, as predicted in AA36, consists of either 464 or 6128, colour monitor and TV tuner, clock radio, joystick, 17 games (*Monopoly*, *Scalextric*, *Cluedo*, *Trivial Pursuit* and *Scrabble* appear to be the pick of the bunch) and 'work station'. Billed as the 'ideal Christmas present' – unless you've already got a CPC, which you have – it's expected to retail at £399, a saving, in a round-about way, of £50. Whether the individual items – modulator, clock radio and 'work station' – will be available separately had not at time of writing been revealed.

arrangement, and may be an indication that this is principally a Christmas machine. How it does after that is anyone's guess.

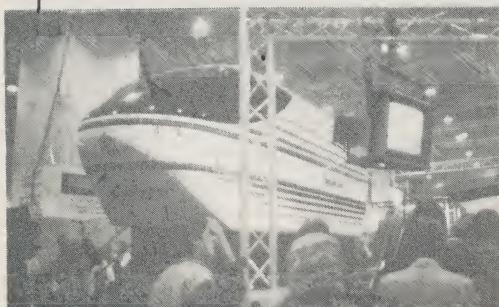

So the big question, of course, is: where does this leave the CPC? Superficially the machine looks to be the successor to both the 6128 and the PC compatible 1512, but since Sugar has already indicated that he has no intentions of dropping the latter it can be assumed he feels the same way towards the CPC. 'So long as people buy it', he has said, 'I'll sell it'.

One industry commentator who has seen it all before described the 200 as 'a turkey', and added wryly: 'Perhaps it'll sell at Christmas, then'.

PC Show '88

The 1988 Personal Computer Show, held for the first time at vast Earls Court, attracted huge crowds, most of them apparently having sharpened their elbows and bought toe-crushing boots especially for the occasion.

Some statistics: display space: 12,000 square metres (that's 50% bigger than last year); attendance, about 100,000 (up on last year's 73,000). Each visitor is believed, on average, to have acquired 79 pieces of paper, 64 plastic carrier bags and eight bruises of varying degrees of intensity.

It was, shall we say, a little busy on Friday, Saturday and Sunday the 16th-18th September. The tube disgorged crowds at approximately two minute intervals, and the harassed security staff shouted themselves hoarse just trying to herd people towards the appropriate doors, and away from the despairing clutch of the 'Junior Fashion Show'. It is estimated that 3,500 fashion-conscious teenagers found themselves playing Savage rather than finding out about the latest in partywear. What happened to the computer buffs who ended up in the wrong exhibition is, alas, not known...

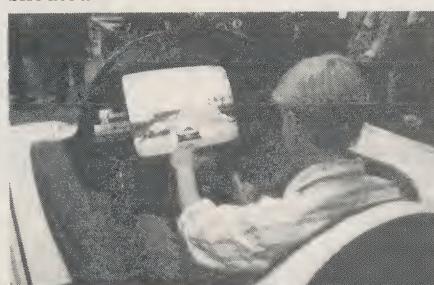

Display of wealth

Once inside, people were bombarded with a barrage of light and sound from the increasingly over-the-top games stands. Microprose had their 'multipassenger simula-

tor Super X' in operation, and the queues never subsided. (The trip, by the way, was good – but not that good. The screen itself, onto which was projected film of hang-gliding, motor-cycling, big dipping and aeroplane flying, was of surprisingly poor quality, though the bounciness of the journey partially made up for it.)

There were the usual enormous displays of wealth from the likes of US Gold, Mirrorsoft, Telecomsoft, Pepsi Cola (*Pepsi Cola?*), and the rest.

However it was Domark, whose appearance at the Show was apparently a late decision, who coolly upstaged everyone with a double-decker bus driven by a grotesquely over-inflated Rambo, complete with knots of blue veins and a bust that would put most of the girls on the US Gold stand to shame. Even better, they had a personal appearance from Her Majesty Dame Mrs Margaret Hilda Thatcher Herself, whose quiet understatement and gentle encouragement was a lesson to us all.

Absent friends

Electronic Arts and MediaGenic, however, chose not to grace the Show with their public presence at all, and there were mutterings in various quarters that the whole thing was getting 'too big for its boots'. The business/serious – games/leisure split was as marked as ever, and it seems likely that the two must eventually go their separate ways.

As far as Amstrad was concerned this was a high-profile show, with launches of big new business machines and the PC200 (see elsewhere in

AmScene). Their stand was fun to watch, as dozens of puzzled punters tapped a few keys on the PC200 and wondered what a Sinclair machine was doing on the Amstrad stand (Amstrad bought Sir Clive out a couple of years ago). Reaction ranged from 'Looks like an Atari, pity about the screen', to 'Why the fuss?' and even, from one world-weary youngster, 'Sugar's flipped. It'll never sell'. Others, however, were more generous, and could be seen shrewdly

calculating Christ-
mas present estimates.

And of course Amstrad Action was there in force, signing autographs, posing for photographs and fighting off the screaming hordes (after blood – ed). We enjoyed meeting so many readers, and perhaps even helping one or two of you. Thanks for all the suggestions, though one or two of them would seem to be physically impossible. If your idea is incorporated into the mag before too long, thanks!

Future Publishing also took the opportunity to promote the latest addition to its stable, *New Computer Express*. Reaction to the free 'dummy' was encouraging: look out for *NCE* at a shop near you! (That's enough free ads – ed.)

Level 9 bury £5,000!

The quest is back on for the Holy Grail, it was revealed at the Show. Yes, like you we thought all that business had been sorted out long ago – but apparently not.

The search for the £5,000 replica of the mug that gave Arthur and the boys such a hard time back in *The Old Days* is a publicity stunt – and a good one at that – to publicise the release of *Lancelot*, Level 9's adventure game out now on the Mandarin label. The item in question is seven inches tall, hand crafted from solid sterling silver and gilded inside with 22 carat gold and encrusted with amethysts, garnets and opals. And instead of nipping round to the nearest jewellers to cash in, 'Sir' Pete Austin and the other Level 9'ers have BURIED IT!

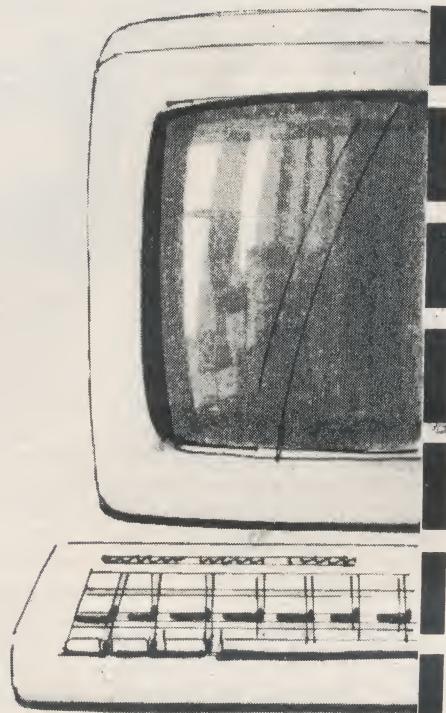

Four preliminary clues,

available on a special telephone hotline, reveal 'possible (but not actual) locations for the hidden treasure'. What use a 'possible (but not actual)' location is to anyone, we hear you ask? Well, the first 36 contestants to guess these locations correctly are to receive a second set of clues which will ultimately lead to the Grail's true place of rest.

● We feature a full review of *Lancelot* in this month's packed *Pilgrim*, which also reviews Level 9's other big release of the moment, *Ingrid's Back*.

When you buy a whole new Amstrad system, why use only half of its potential?

A Message from Amstrad's Chairman

Dear Amstrad Computer User,

You don't need me to remind you that you have selected the best computer in its price range. Numerous journalists from the specialist press have now contributed to the opinion that Amstrad computers represent the best all-round machine you can buy.

One of the many reasons why computer journalists have received our products so enthusiastically is undoubtedly our careful attention to providing information on the system and its software.

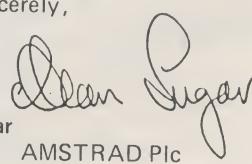

You can be a part of Amstrad's ongoing effort to inform and help users by taking advantage of this opportunity

1. 12 Issues of the Official Amstrad Magazine.
2. FREE access to our superb CPC Technical Support Service.
3. Discounted Software . . . best prices in the U.K!
4. Monthly Amda CPC Newsletter.
5. 24hr Ordering Service.
6. Welcome Pack.
7. Introductory Gift if you join TODAY!
(worth between £3 - £7)

to join the User Club. Catering only for the Amstrad computer user, this specialist support club was initially formed by Amstrad solely for the purpose of assisting you with all your computer needs.

There are many immediate and direct benefits available, so don't delay before filling out the application form below and sending it back to Amsoft.

Yours sincerely,

Alan Sugar

Chairman AMSTRAD Plc

AMSTRAD
- USER CLUB -
It pays to belong!

Bits & CPC's

- Microlink, the electronic mail system people, have announced that its subscribers can now communicate directly with the world's fax users - 200,000 of them in the UK alone.
- Electronic Arts have clinched deals to distribute for both the French Ubi Soft, of *Asphalt* fame, and the Spanish Dinamic, of *Game Over* and *Army Moves* renown (*Game Over II* is reviewed in this month's *Action Test*).
- Good luck to new venture 'Software Circus', which claims to be Britain's 'first speciality store selling only computer software' and which opened at the end of September in Oxford St. Over 500 titles are available.
- A Mr William Bailey has had the clever idea of establishing The Adventure Writer's Companion. The idea is to offer hints, advice and critical reviews to those people who've written adventures - whether GAC'ed, PAW'ed or in their own language. Reviews could be published in a newsletter and the word spread that a good adventure was available. Interested? Write (no adventures yet!) to: William Bailey (TAWC), 4 Worcester Rd, Hatfield, Herts AL10 0DX.

Hackers to be outlawed?

Legal moves are afoot to make computer hacking a crime.

At present you're not breaking the law if you bust into someone's computer security unless you actually commit damage such as fraud or sabotage.

The plan - and at the moment it's no more than that - is revealed in a paper for discussion published by the Law Commission, and would bring Britain into line with the United States, Canada, Sweden and France, where hacking is already specifically outlawed.

- Superior Software, who've concentrated until now on the BBC, have taken over Alligata ('software with bite' - geddit?), who did *Who Dares Wins II*.

First fruit of the union is *By Fair Means or Foul*, reviewed this month in *Action Test* and notable for allowing you to cheat with head butts, groin punches and kicks - so long as the referee doesn't catch you!

The Show goes on!

Recovered from the PC Show yet? Good, because you're just in time for the next one!

The Amstrad Computer Show returns to Manchester - to be precise, the G-Mex Centre, on October 21-23. Michael Meakin, head of the Database Exhibitions, which is organising the show, claims that with all the new features and the 70 companies exhibiting, 'This will be the most exciting computer show ever held in Manchester'. Exhibitors include Arnor, Brunning Soft-

ware, Database Publications, Goldmark and HSV, among many others. Siren Software will have *Micro-Design Extra*, 350K's of extra fonts and clip art costing £12.99. They'll also have a range of 3.5 inch CPC disk drives, offering 800K capacity per disk at £124.99.

Gimmicks promised include 'Amstrad Street', as well as the 'Amstrad Arms' and the 'Amstrad Office' (the possibilities are endless). Of more interest to CPC users

may be the 'Amstrad Advice Stand', manned (personned?) by specialists - including CPC boffins. There is also to be a 100-seat theatre, the setting for Question and Answer sessions with top experts and a 'Meet the Editors Forum' (Steve Carey's invitation is presumably still in the post...).

The Amstrad User Club will be on hand, and some surprises are promised: 'Wait and see', threatens Christine Lees, Database Exhibitions

operations director: 'We don't want to give too much away too soon' - a remark that can be interpreted in more ways than one...

The Show is also an opportunity for those who missed the Earl's Court bash to get hands-on experience of the PC200, and should prove a worthwhile expedition if you are thinking of splashing out in the near future.

After all, Christmas is just around the corner (what an appalling thought...)!

As ever, the PC Show provided the ideal opportunity for a whole host of releases, previews, demo's and promises (these last to be taken with a substantial dose of salt!). Here's just some of what's coming soon...

- Activision have just signed a three year worldwide deal for software rights to Games Workshop - well known for their roleplaying and board games. First fruits are *Warhammer Fantasy Battle* and *Warhammer 40,000*. Magic and monsters feature heavily in the *Warhammer Fantasy Battle* and the far future is the setting for *Warhammer 40K*.
- All three divisions of Telecomsoft have something heading your way in the coming months. Firebird

are to release *Savage*, which stars a homicidal axe wielding maniac on a quest to save his friends from a dank and

Games news

gloomy dungeon. Monsters must be bashed and objects collected as you run around the dungeon. It's due out November 2nd at £9.99 and £14.99 on tape and disk respectively.

Rainbird's contribution, *Fish!* is an adventure from Magnetic Scrolls, the people who brought you *The Pawn* and *Guild of Thieves*. You play the part of a goldfish (yes, honestly) out to save the world. It'll have the usual excellent graphics and will set you back £19.99 (disk only). No release date has been fixed yet.

A quintet of games from the Silverbird budget label are also heading your way: *Skateboard Joust*, *Hopper Copper*, *Classic Dogfight*, *Scuba Kidz* and *Turbo Boat Simulator*. All cost £1.99 on tape.

- A fast moving 3D shoot-'em-up with highly detailed graphics is being converted to the CPC. *Afterburner* is the arcade game in question and it's gonna take

some doing to get it running fast enough on a home computer: a 3 Meg. arcade game is getting squeezed into 64K pot! The release date is set for January.

- SDI should be on the streets by the time you read this. Nuclear war has begun and you have to stop the destructive missiles landing on your poor defenceless population.

R-type is another arcade action scrolling shoot-'em-up due very soon. Loads of different weapons can be strapped onto your ship as you zoom around killing everything in sight.

Finally there's *Time Scanner*, a pinball variant to keep you hitting the flippers. There are four stages to go through, each linked by a time tunnel. To gain entry to the tunnel you need some sharp pinball skills. January is when it's due. All four games cost £9.99 on tape and £14.99 on disk.

REACTION

Your letters, gratuitously headlined in tabloid style

Cassette scandal

As you can see, I'm returning the (almost) free cover cassette from AA37 as *Dizzy* totally fails to load.

Apart from duff 'free' gifts I think AA is excellent - I get it every month and read it from cover to cover. Keep up the good work!

Peter Nunn,
Welshpool

We are very sorry indeed to hear your cassette won't load, Peter, and we will of course send you a replacement pronto. We've had a few similar complaints, and if yours was one of them we extend the same sincere apology and promise to replace your tape.

What can we say? We issued almost 50,000 tapes, and if even one in a thousand fails, that still means disappointment for 50 of you. Turn to page 33 and Problem Attic for more details.

Commentator threat

If anyone out there is getting bored of *Matchday II* (because they always win by miles, and they get thrashed when they put the skill level up), here's the solution: commentator! I give my players names, like Stavros (centre forward) Loadsamoney (Winger) Harry Enfield (winger) and Buggerallmoney (midfield). You can really go over the top with commentating, or just go... 'Yop! yop! yooopp!' like David Coleman. I am brilliant.

Luke Storkey (11)

That's ehrr, remarkable! Actually I find *Matchday II* is fine as it is, but I've tried your solution, Luke, and it really does work. My favourite was the snooker commentator who said, 'And for those of you watching in black and white, the blue is the one behind the red...'

Does anyone else do anything to improves thing during a game (that we can print)?

AA foul language protest

I enjoyed your 'Whizzkids' article but please, in future can you please leave out some words readers of roughly seven will not wish to read.

Martin Biggs (11)
Poole

Interesting point. So you want us to falsify our quotations so they won't give offence? Surely when there is unpleasant violence and sexism in so many computer games, the odd only very slightly naughty word in the context of a lengthy and serious interview is not going to turn any seven year old off? Besides, I don't know many seven year olds who don't wish to see such words: generally it's their worried parents and teachers who try to protect them. But we take your point, and generally take great care with

● Computer games 'violence' horror

Last year you published in booklet form a collection of pokes, maps and tips which had appeared in your magazine during 1986/87. It proved a constant source of inspiration and an essential lifeline to my children and me at times when we would have otherwise given up trying to persevere with games because of intense frustration brought about by apparently inadequate dexterity and reduced mental capacity (probably exacerbated by rage at being constantly thwarted at the last as victory seemed to be within our grasp).

Your publication therefore not only saved the family's sanity, but also helped to greatly enhance the pleasure and satisfaction we gained for our money; it was also instrumental in preventing me from putting a fist through the monitor's screen in particularly stressful moments.

You will therefore not be surprised to hear that I have been looking forward to your publishing this year's edition, and understand my disappointment that, as yet, there has been no mention of its impending appearance. Was last year's booklet a once only offering or will you be making it an annual feature?

I. Ellison
Gloucester

At present we have no plans to do another Cheat Mode booklet, but if there was sufficient interest we might change our minds...

what goes into the mag - hands up those who said it sometimes doesn't look like it!

Loads of terror

Help! the other day I bought *Druid II*. I rushed home to play it, but to my disappointment it did not work properly. I loaded the other side but the same thing happened, so the next day I took it back and they kindly changed it for me. When I got home I loaded it straight away. It still didn't work and neither did the other side so the next day I took it back again. This time they loaded my tape on one of their Amstrads. It worked first time. They gave it back to me and told me to try it again, but it still wouldn't load on my computer. I tried it without any added peripherals, that included the joystick, but still no luck. The plot thickens, because I own a 464 and that was the model in the shop. My tape deck is clean, especially the heads and wheels, I

cleaned them only a few weeks ago. I have well over a hundred titles all originals and they all work perfectly. So something is definitely wrong and I just hope it isn't my computer. Please print my letter as I'm sure I can't be the only one with this kind of problem.

David Durrant
Peterborough

If Druid II does work in the shop, but not at home then your machine is to blame. The tape heads are probably out of alignment and need adjusting.

'Fish out of water' probe

For nearly two years I have been trying to purchase a copy of *Jack Charlton's Match Fishing* for the Amstrad CPC 464 (cassette).

I have been to many software stockists to try and buy this game, but none of them have it in. So I have ordered it many times in many shops, but nobody is able to get a copy.

I have enjoyed many hours playing this game on a friend's Spectrum, but since then I have moved houses and have tried loads of computer shops all over England.

I wrote to Alligata (who released this game) but had no luck. My letter to them was returned by the post office stating that this company had gone away!

Matthew Taylor
Bury St Edmunds

The rights to some of Alligata's games have recently been bought up by Superior Software, but a fishing game endorsed by Ireland's footy boss is not, unfortunately, one of them. Does any kind soul have a copy they'd like to sell, lend or even give to poor old Matthew?

Sensible suggestions shock!

As a father with young children who are becoming increasingly interested in the family computer I wonder if you might do a little more to cater for this in the magazine. The following are suggested:

1. An indicator on games reviews i.e. 'this might appeal to under 7'. Sometimes your reviewers mention this, could it be formalised? Some people might disagree but to my mind there is a difference between the 'killing' that takes place in say, *Kane*, to say, *Barbarian* and games like *Parky* or *Paperboy* manage to be good games without any death at all. The difficulty of the game-play would of course have to be another factor in any recommendation.

2. How about the equivalent of a 'Children's corner' somewhere in the mag? Perhaps containing a simple type-in or comic strip etc. This would enable the magazine to be shared rather than just being for dad.

3. Type-Ins seems to go from strength to strength but I wonder if there might be scope for those who can't write programs themselves to have a chance to indicate what they would find useful. Besides being of value to the sender of the idea it might prove stimulating to the 'typers' to try to deliver the goods. I'll start the ball rolling if you like by asking for a program that will make a library disc of the discs in my collection and allow me to add, delete, print etc.

L. Smart, London

1) Perhaps. The trouble is, young people are extremely sensitive if they think, rightly or wrongly, they are being patronised, and if we said, 'This game is great for five to seven year olds', five to seven year olds all over the country would be saying, 'I'm smarter than that, I can play loads of games fifteen year olds play'. Indeed, I have recently heard this argument used by software houses as their reason why they don't do the same.

2) We try not to ghetto-ise the mag more than is absolutely necessary: we know many 'serious' users play games, for example, and many alleged games freaks are greatly interested in word processing and so on. So our attitude to children isn't to say, 'Here, you get on with this while we grown ups do the real stuff. I know that's not what you're suggesting, but it's difficult for adults to get the tone consistently right for children. However, let us stress that we are particularly interested in this suggestion, and if any suitable contributions come our way we shall endeavour to use them. Young people out there: get working!

3) Now this is a marvellous suggestion, and contributions are warmly invited. What would you like to see in Type-Ins?

by SARKAR

REACTION EXTRA

Digital Integration's Dave Marshall and Romantic Robot's Alexander Goldscheider get serious

“ THEFT! Is shop lifting socially acceptable? Or burglary? Of course not! So how on earth can magazines such as AA support companies like Romantic Robot?

I refer to advertisements in your September issue (and many previous occasions) for the Multiface Two and other similar devices. To quote the advert, 'No program is safe, solid gold for hackers' – no mention of course that copying is illegal! So who cares? Perhaps we had better lay out a few facts and we'll begin to appreciate the consequences.

Software houses employ programmers, administrators, marketing managers. PR agencies etc. We have development costs, production costs, rent, rates and advertising and distribution costs. Our products are marketed through distributors and retailers at discounts that enable them to make a living too.

Imagine you have spent more than £250,000 developing a product over 18 months only to see an advertisement for a product encouraging the buyer to copy your software. Blow a fuse? How restrained... We spend time and effort trying to reduce piracy, not because we're mean and nasty – this is our livelihood at stake!

So what are the excuses? 'You need to have the device attached for the program to run'. Is copying no longer theft? This is sales promotion, not active encouragement of copying. In other words, as long as your friend has one of these devices, illegal swapping and playground sales are OK? What about making the device insert a serial number on the copied program to tie it specifically to that device? Too expensive, I suppose, or perhaps not in the manufacturer's interest.

Here's another one. 'People learn from hacking – how to write programs etc' A few articles on games design and programming techniques might be more in order and more usable to your general readership. And what making back-ups and changing media? Our policy has always been to help the customer by replacing damaged produce at a nominal

charge for p. & p. We also provide an upgrade service if any customer wishes to change from cassette to disk.

Surely we share a mutual interest in seeing copying services banned. Come to mention it, they will be illegal soon ... heard of the Copyright, Designs and Patents Bill?

”

Dave Marshall
Director, Digital Integration

“ Software – and hardware-piracy is a serious problem indeed. The problem with Mr Marshall's letter, however, is that in trying to find a suitable scapegoat he picks on the wrong party and grossly misrepresents the facts. His suggestion that we advertise a product encouraging the buyer to copy his software is ludicrous! Mr Marshall quotes a line from our ad referring to *The Insider*, and associates it with the *Multiface Two*. This is not only unethical, it is just plain nonsense. Furthermore, the quotes are misquoted and taken out of context. We do say, 'No program is safe', but continue, 'once *The Insider* gets in'. There is indeed no mention that copying is illegal because *The Insider* has nothing to do with copying. *The Insider* is a disassembler, it translates bytes into machine code mnemonics. Our ad just stresses its uniqueness – the fact that any program can be instantly disassembled at a touch of a button. This is fantastic for anybody working with m/code – and disassembling/assembling is what programming on Z80 is about.

Of course we are against piracy in any form. The important issue is to draw the line between personal backing-up and illegal piracy. Backing-up is an essential activity in computing. It is perfectly legal and I cannot imagine it becoming unlawful. Since the Lords' recently ruled that the use of twin tape decks – whose only reason of being is copying – is legal, how can personal copying of computer programs conceivably be banned?

The Multiface is, among other things, certainly an ideal backing-up tool. The fact that it can transfer between tapes and disks is surely welcome. I appreciate that Digital Integration may release programs both on tape and disk and even upgrade for a fee from tape to disk, but by far not everybody else does. It is also

far simpler and cheaper to do it yourself and to put even, say, four different programs on a single disk – hardly anybody would do that for you! Remember that only with *The Multiface* can one decide at which point to stop a program, back it up and continue from the same point next time.

Only *The Multiface* makes it possible to save/dump any screen at any point and is therefore used by many magazines for screen shots. Finally, *The Multiface* has an unparalleled Toolkit, again unique because it sits outside your computer and can show and change all the inside at any time. This is a dream for any serious programming just as it is for simple customising of programs, poking infinite lives, etc.

We have literally hundreds of letters praising *The Multiface*. It has universally received most favourable reviews, has won many awards in the computer press, has been voted the best peripheral, etc. Computer machines use it to review games, top software authors for writing programs – and so on.

But then, its quality is not in question: its possible misuse is. Admittedly, programs saved with one *Multiface* will run on another. Mr Marshall is quite right in saying it would be too expensive to serialise *The Multiface* – not for us, but for the owners as the retail price would jump up and be unrealistic. The serialisation is also highly impractical when it comes to upgrades, repairs, etc.

Above all we are convinced that *The Multiface* is a genuine and unique multi-purpose utility and not a pirating tool. We do not believe for a second that it would ever be used for mass piracy – cassette or disk duplication would. In fact, we welcome this debate as it may bring valuable and views and information from the public on the matter, and on the use of *The Multiface* specifically. As for our part, I can only most strenuously refute Mr Marshall's criticism of our products and advertising in relation to illegal copying. I hope we will again see more productive efforts from Digital integration than the misguided and poorly researched letter in question.

Dr Alexander Goldscheider

Has Mirrorsoft's *Fleet Street Editor* been worth the wait?
Why does its arrival mean the AA finally gets tidied up?
Pat McDonald answers these and many other questions

FLEET STREET EDITOR

Mirrorsoft 01 377 4644 • £39.95
6128 disk only

Welcome to the only piece of software ever to be left behind by history. Thanks to The Computer, virtually no newspapers are produced in Fleet Street any more. Mirrorsoft have been converting *FSE* for quite some considerable time now – it was mentioned as imminent as long ago as AA4! It's long been an AA office joke: the stock reply to avoid unpleasant jobs was, 'I'll get round to it when *Fleet Street* is published'.

Looks like a lot of odd jobs will get done now...

First Impression

The package is encased in an attractive bright red binder. Inside there's a looseleaf manual and two disks. Maybe it's a big program? What's it do?

Fleet Street belongs to that branch of software known as desktop publishing packages. These are used to lay out documents, both text and pictures, into a professional looking finished page or pages suitable for publication. Such software ranges in scale from that which would have difficulty in laying out a club newsletter to the industrial level which uses them to print real books and magazines (such as AA – produced on good old 6128's and Apple Macintoshes).

On this sort of scale, it's fairly obvious which end the CPC by itself is closer to – but don't be too quick to judge (see the article in this issue to see how well CPC's do.)

Get down to it

The manual is loose leaf, and starts out well with a hands on demonstration using a partly finished document. This is easy enough to do, and teaches the elementary controls very quickly – as well as offering a friendly welcome to the program.

It's a shame that the manual doesn't help as much from then on. Rather than giving similar tutorials on further features of *Fleet Street Editor*, you are left with a long descriptions of lists of features and not much else. A pity really, because what's there is well written and presented.

I've dealt with the manual, but what of the two disks? Both sides of each of them is used: one contains the main program, the other contains lots of graphic libraries to use in your own document. There are plenty of these, although they are mostly small logos rather than digitized action.

Good stuff

The program has three distinct sections, arrived at via a front end screen showing three icons. The cursor keys or space bar moves the marker from one to the other, and RETURN selects it.

The first part of the package is the graphics section, used to organize the artistic element of a document. It accomplishes this

Press option

If so far you've got the impression that *Fleet Street* maybe isn't the best thing since sliced bread, you could well be interested in *Stop Press*.

Stop Press (*Pagemaker* as it was then called) was originally announced in the same issue as *Fleet Street*. It too was late (it was reviewed in AA17), it too had bugs. But Advanced Memory Systems took note of the huge response from users, and fixed the more obvious bugs. It is to be hoped Mirrorsoft do something similar: we'll let you know when they do.

What makes the difference between the two is that *Fleet Street* has three complete modules, which rarely necessitates the programs accessing the disk drive and so is relatively fast. This is in complete contrast to the AMS offering, which loads virtually every function from a program disk. So although using lots of different functions is slow, the way they operate is more sophisticated, because the disk has more space for programs than the memory.

The most fundamental difference is the dot resolution on the printed page. The maximum Epson dot resolution uses quadruple density graphics to produce 1,920 dots per line. *Stop Press* can print a page out on this screen, using the whole width of the page. By contrast, *Fleet Street* prints out a page across just a quarter of the page. In other words, the dot resolution is much less. This means that there's less you can physically put onto

Fleet Street and the output looks cruder.

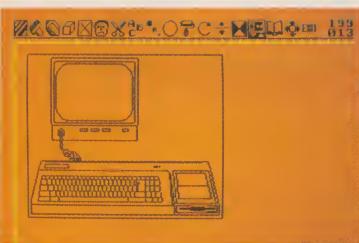

In addition to this, there are lots of little things that make *Stop Press* just that little bit special – you can load extra fonts, plug in a video digitizer, use graphics from outside much easier, scroll around faster, and so on.

This is unfortunate, because Mirrorsoft's product is much friendlier and easier to use. The way the individual parts all load – allowing you to get on with editing – together with the way you can adjust the baselines of columns, make the product fairly novel. Text editing, bugs notwithstanding, is much simpler. And it's cheaper, retailing (with its graphics library) for £39.95: compare that to the AMS price of £74.98 (price includes *Extra!* *Extra!*, the *Stop Press* library).

Even with the price difference, *Stop Press* is still head and shoulders above the competition. Hard luck Mirrorsoft, congratulations AMS.

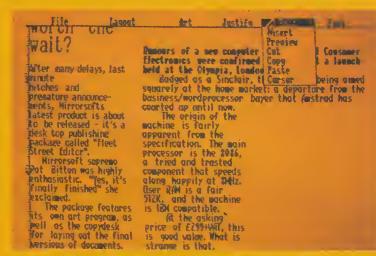

Desktop Publishing

Setting up artwork...

Setting up the headlines...

Main text should be well spaced...

HOLD THE FRONT PAGE!

Well, not quite. Here's how *Fleet Street Editor* copes with a page of Amscene

...to be released - it's a desktop publishing package called "Fleet Street Editor".

Mirrorsoft supremo Pat Button was highly enthusiastic. "Yes, it's finally finished" she exclaimed.

The package features its own art program, as well as the copydesk for laying out the final versions of documents.

Hard-bitten Technical Editor Pat McDonald was cautiously impressed with the program's performance. "It's quite easy to grasp, unlike some desk top publishing software" he said.

"And it's powerful."

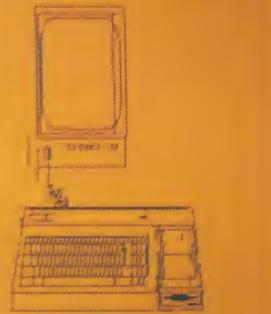

Machine is fairly apparent from the specification. The main processor is the 8036, a tried and trusted component that speeds along happily at 8MHz.

User RAM is a fair 512K, and the machine is 16MHz compatible.

At the asking price of £299+VAT, this is good value. What is strange is that,

although the PC200 is labelled as a games playing machine, the graphics and sound capabilities are extremely modest.

What could be of concern to the manufacturers is the sophistication of the new machine's rivals. Their sound and graphics are of a very high standard indeed.

Adding graphics, then finally reshaping the text. The page is complete!

through simple two tone pictures. As every Amstrad owner knows, Mode 2 is the black and white high resolution mode, yes? So the program should use mode 2, yes?

Well, no, actually. Instead images are read into the machine using medium resolution mode 1. The reasoning, apparently, stems from the fact that the pixels are square, rather than rectangular, in this mode. Artwork and drawings are thus easier to get into proportion.

The cursor/pointer used in the art package is a nifty little item, featuring the usual cross hairs and a flashing dot in the middle. If the dot doesn't flash, it means the machine is busy doing something. The **SPACEBAR** is used to confirm decisions (why?), rather than the **RETURN** used in other parts of the package. The above is used to control the WIMP environment which stands for (all together now!) Windows, Icons, Mouse and Pointer/Pull down menus, depending on where you heard it.

Running across the top of the screen is the usual row of icons. By the left (wait for it!)... **Brush size adjustment**, **paint**, **pencil**, **boxes**, **eraser**, **undo**, **scissors**, **text**, **zoom**, **circle**, **fill**, **rotate**, **mirror**, **invert inks**, **disk access**, **library**, **re-size** and **exit**. Also on the screen are the **screen co-ordinates**. For an exciting, dynamic explanation of what they're used for, read on.

Freehand

Doodling on the screen is easy – and fun. The regular drawing functions are there: line drawing, circles and boxes created with 'elastic lines', so exact positioning is not difficult, though most of the time you probably won't be so finicky. Other aids to getting your artwork just right are the screen co-ordinates, which can be remembered when drawing point-to-point. Drawing the edges of shapes, then, is more or less trouble free.

Filling these shapes with patterns – to give the effect of shades of light and dark – is also no problem. The fill command gives a list to choose from, and you can define your own pattern. The brush command is similar, but the pattern only goes where you put it, as opposed to fill splattering 'ink' all over your design. The brush size is adjustable in both width and height. Regrettably, a spray-can function has not been included.

The graphics libraries stored on the second disk can be accessed from the art program simply. They can be loaded into a spare screen, and the artwork you desire can be moved into the

main editing area with the minimum of fuss.

Text is fairly easy to add onto a piece, although there are drawbacks with this function: characters can be printed in any direction, but no extra fonts can be added, and text always remains in the same size. And because shift is used to swap between icons, capitals must be selected using **Caps Lock** – not the easiest thing to remember. The **Copydesk** should settle most of these deficiencies.

A copy of the screen before the last operation was completed is always held in memory, so experimentation is not fraught with danger. The icon, strangely enough, is a face.

Job done

Finishing off artwork can be laborious, and the editing operations that help with this are good. Mistakes are erased with the paint brush option using a blank pattern. Large rectangular areas of the screen can also be cleared, and wiping the whole screen has to be confirmed by pressing **y**.

Moving areas of the screen about – cut/paste operations to the technical – is efficient, if somewhat slow. Similarly, mirroring and rotation can be done on small parts of the screen. Zooming in for some fine detail is just as convenient to have, although **RETURN** has to be pressed to finish it, not **SPACE**.

There is a re-size function to enlarge or compress an area, and distortion of the image is minimal.

Finally, artwork can be saved out as a cut, or box, saved to disk in a compressed form – a full screen might use as little as 8 or 9K. These cuts can be included on a page.

Problems, problems

Using this art program is easy, but importing graphics from outside ranks with turning your 464 into a 6128 for difficulty. The problem lies in the fact that ink 0 is used for the foreground (ink colour) and ink 1 is used for

the background colour. So images that you load look like photographic negatives.

Admittedly, writing a Basic program to invert the inks (or even process them) is not too difficult, but it shouldn't be necessary in the first place.

Copydesk

This part of *Fleet Street* deals with actually producing a page, using some fairly traditional methods. Sitting comfortably? Then we'll begin.

Until a few years ago, printing masters were set up by typesetters, who used to insert characters made out of lead into a blank page board. This would be set up manually to have the correct layout, with the margins set up, and so on. It was a time consuming and extremely skilled task.

In a superficially similar way, *Fleet Street* lays out the text across a grid-like pattern that conforms to the page layout. The grid is alterable, so that you can place pictures on the page, and have text flow around them. This is a very fundamental feature – the program remembers the text and pictures independently of the screen memory. If the layout is changed, the page is redrawn from this backup buffer to conform with the new pattern.

When you've loaded (and turned over the disk) you can select the margins. A wide margin looks better, but gives you less space to work on. After that, you select the number of columns – the page you are reading has two.

The screen setup is similar to the art program, in that there is an options line across the top of the screen. This contains the words (no icons): **File**, **Layout**, **Art**, **Justify**, **Edit** and **Font**.

Incredibly slow

Edit is probably the most used. It contains the option **Insert**, for getting at the text. You must first select which column you wish to edit – they are all independent of each other. That way, a mistake on one doesn't generally mess up the others as well. There are also some cut and paste options, which work very well for editing text. You can even examine the cut and paste buffer, to check that you're moving the right thing. Oh, and you can get a preview of your work – although this takes minutes, and involves saving the page to disk.

Inserting text is probably the most time consuming part of using the program. The scrolling up and down of the page is so incredibly **slow**. You can almost see the program thinking, 'Hmm... Shall I scroll a bit more?'

The program supports a fair range of fonts, all selectable from one of the pull-down-menus. They include both serif (with tails) and sans (without). The full list is West End, Ritz, Italic, Cube (science fiction), Full, Engraved, Olde and Stencil. – the names are loosely descriptive of the fonts' various appearances. A bold option is included, as well as 16 point and 24 point size characters for headlines and straplines.

Unfortunately you cannot load or design any alternative fonts – you're stuck with the above. It may seem a lot, but only four fonts for headlines? Methinks two pages produced with this by two different people will look almost identical.

Justification of the document is configurable, in that you can choose between left justified (ragged edged), centre (so everything is central) and full out, which makes lines fit across the screen as much as possible. The trouble is that this function is global, i.e. if you redraw the screen, all the text appears using the one justify option! You can get round it, but it's tricky.

Inserting text is all very well, but the pages are generally formatted around the pictures. These are loaded from within the **File** menu, and put onto the screen using the **Art** menu. Positioning is accurate down to the character scale which is always onscreen, so getting it right isn't difficult. Problem: at present, loading graphics corrupts them! What you get is the original picture, with extra lines cutting it at random. Not good.

There are also two art commands, line and box, which can be used to surround text to good effect. The hassle (and positioning graphics is just as bad) is you can only place artwork on what is onscreen – which means scrolling down to the relevant part of a page. Once you have some artwork, you'll probably have to tidy up where the text goes, so that the two don't overlap. *Fleet Street* is good at this. You can choose to do a whole change, which changes all of the text column widths at once: a single line

Head to head

	<i>Stop Press</i>	<i>Fleet St Editor</i>
Editing Area	911 X 557	640 X 640 (approx)
Scrolling Speed	Good	Fair
(Page top-bottom)	4 secs	1 min 30 secs
Print options	Yes	No
Standard screens?	Yes	No
Page length in bytes	69632	37888

The evidence is incontrovertible: *Fleet St* is hopelessly underpowered compared to *Stop Press*.

change, good for irregular columns (wrapping around graphics): and above or below the cursor line, so you can setup boxes of text quite easily.

In a similar vein, you can adjust the 'leading', an archaic term which refers to the spacing between the lines of text – the 'baselines' (we've increased the leading in this paragraph to illustrate what we mean.) Spreading your text vertically in this way makes it much easier to read.

Finally, the **File** options generally do the housekeeping tasks necessary to keep the system working. These include the obvious features – loading and saving text and pages, and loading graphics – as well as the more novel...

If a column overloads with the text, the excess can be placed in an overflow buffer. This is similar to the cuts buffer, but it can be retained if the screen is cleared. So you can put more text onto a second page if you run out of space, although you must finish with the first page first: you can only edit one at a time.

The limit

One of the problems with *Fleet St* is to do with the way it remembers everything that goes onto a page. Inclusion of lots of graphics is not possible, because the memory fills up relatively quickly. Two 9K pictures won't fit at the same time. You can't just load one, put it up, delete it and load the next either – it's wiped from the page as well as memory when you delete it.

The printing options are fair. Both draft and quality prints are supported: put simply this means that the print head prints either once or twice.

All in all, I can't say I'm terribly impressed with the **Copydesk** part of *Fleet St*. The problems aren't just the bugs, which are fairly awful in themselves: no, it's the slow speed of scrolling, and the lack of memory for graphics.

I did say that there were three parts to this, and the **Administration** is the last module. It is used for mundane tasks like setting the default drives, changing the screen colours etc, and also for converting four colour mode 1 screens into two colour mode 1 screens. It makes no attempt to interpret the image, so you're generally left with a negative image that's unusable.

Finished?

In conclusion it must be said that, even for a pre-production copy, this program is useless for desktop publishing. The only purpose for which people would buy it is as a challenge: make up a page **despite** the bugs and user unfriendliness...

GOOD NEWS

- Relatively cheap.
- Manual is well written.
- Easy to edit text.

BAD NEWS

- Bugged beyond belief.
- No extra fonts.
- Not exactly fast.

WITH AN AMSTRAD CPC

— **TV & COMPUTER SYSTEM YOU'LL WANT TO BE SENT TO YOUR ROOM MORE OFTEN.**

COLOUR TV & COMPUTER MONITOR

Not only is the monitor great for playing games in glorious technicolour, when used with the Tuner you have a brilliant 14" colour TV. So after a hard day blasting aliens you can relax and watch your favourite TV programmes.

17 GAMES

You can get started right away with the 17 Games included in the package. There's all the best titles (Trivial Pursuit®, Monopoly®, Cluedo®, Scalextric® and Scrabble® to name just a few) so the fun starts as soon as you get your hands on an Amstrad CPC TV & Computer System. (Cassette boxes shown for illustration.)

CPC 6128 COMPUTER

A state-of-the-art disk drive computer. So if it's power you want, the CPC 6128 has the memory of a whole star system. The disk drive gets you loaded and ready to fire in seconds.

WORKDESK

The Workdesk keeps everything in one place. So you have the complete TV & computer system at your command all of the time.

Amstrad CPC TV & Computer Systems turn any bedroom into a nerve centre of pure excitement.

A colour-TV, colour monitor, clock/radio, CPC computer, with disk or cassette drive, 17 games, joystick and a workdesk to keep everything tidy, all add up to the best home computer package ever offered.

If you've got an Amstrad CPC TV & Computer System in your bedroom, being sent there is never a problem.

AMSTRAD TV & COMPUTER

bers are called operands. In the last few instalments we saw how variables can serve as operands. This time, we've seen that an operand can in fact be an arithmetical expression like ' $a+10$ ' or ' $c-d+32$ '.

You can perform all the normal arithmetical operations, but some of them use unfamiliar symbols. While ' a ' plus 10 is just ' $a+10$ ' and ' a ' minus 10 is ' $a-10$ ', ' a ' times 10 and ' a ' divided by 10 are ' $a*10$ ' and ' $a/10$ ' respectively.

Expressions aren't just useful as operands. They can also be used in assignments - the commands which assign values to variables. Things like ' $a=b$ ' or ' $a=45*b$ ' are fine. You can take this even further with assignments like ' $a=a+10$ ' which increases ' a ' by 10 , and ' $a=a*2$ ' which doubles ' a '.

it's supposed to move down a line after each `PRINT` command.

The semicolon on the end of line 25 tells the CPC to stay on the same line, and this means that line 30 prints the value of ' a ' on the same line as each 'Number' message.

Next month we put our newly acquired knowledge of printing to work

always onscreen, so getting it right isn't difficult. Problem: at present, loading graphics corrupts them! What you get is the original picture, with extra lines cutting it at random. Not good.

There are also two art commands, line and box, which can be used to surround text to good effect. The hassle (and positioning graphics is just as bad) is you can only place artwork on what is onscreen – which means scrolling down to the relevant part of a page. Once you have some artwork, you'll probably have to tidy up where the text goes, so that the two don't overlap. *Fleet Street* is good at this. You can choose to do a whole change, which changes all of the text column widths at once: a single line

PRICE PROMISE

FULL RANGE OF PCW & PC SOFTWARE AVAILABLE

for which people would buy it is as a challenge: make up a pad despite the bugs and user unfriendliness...

GOOD NEWS

- Relatively cheap.
- Manual is well written.
- Easy to edit text.

BAD NEWS

- Bugged beyond belief.
- No extra fonts.
- Not exactly fast.

ABSOLUTE BEGINNERS

More Basic the easy way

Even if you're crazy about numbers, that last program probably didn't get you too excited. Well, let's see if we can do something a bit more interesting. Try this:

```
10 FOR a=1 TO 50
20 CLS:MOVE 320+a, 200-a
30 DRAW 320+a, 200-a, 1
40 DRAW 320+a, 200-a, 1
50 DRAW 320-a, 200+a, 1
60 DRAW 320-a, 200+a, 1
70 NEXT a
```

It's a modified version of the square-dragging program from last time, only this time the square stays in the middle of the screen, starting as a point of light and gradually growing larger. You could use the STEP command to make it grow faster, the way we did last time. Try modifying the program to read like this:

```
5 a=1:b=2
10 FOR c=1 TO 10
15 a=a*b
20 CLS:MOVE 320-a, 200-a
30 DRAW 320+a, 200-a, 1
40 DRAW 320+a, 200-a, 1
50 DRAW 320-a, 200+a, 1
60 DRAW 320-a, 200-a, 1
70 NEXT c
```

Now you'll find the square grows faster and faster, as if you're flying towards it. So what's changed?

The variable 'a' controls the size of the square. In the original program 'a' was the loop variable, so it increased by a fixed amount each time. In the modified program on the other hand, 'a' doubles each time. That's what the '`a=a*b`' in line 15 does. It's the same technique we used in the 'powers of 2' program you typed in earlier on, only here the variable 'b' is used instead of 2. It works the same way

though, because line 5 set the value of 'b' equal to 2.

The only problem with this modified program is that it's a bit fast. If we want to slow it down, we're going to have to reduce 'b' a little. Try changing line 5 to '`5 a=1:b=1.5`'.

Now edit line 10 so the loop repeats a few more times: '`10 FOR c=1 TO 20`' is about right, but the precise number isn't too important. To slow the program down still further, just set 'b' to some even smaller number - but keep it greater than 1 - and alter the loop count in line 10.

Print

The **PRINT** command is pretty cumbersome to use. Try this little program:

```
10 FOR b=1 TO 10
20 PRINT "This is message number"
30 PRINT b;
40 PRINT "out of total of ten"
50 NEXT b
```

Even using question marks, that's a bit long-winded for such a simple operation. If you wanted to do all that printing in one program line, you'd end up typing.

`"This is message number ";:?b ;:?"`

`out of a total of ten"`

Notice the way you have to put semicolons to stop the CPC from moving down a line, immediately followed by colons to separate it from the next **PRINT** command.

In fact, you don't have to do anything so complex. If you want to print a whole load of things on one line of the screen be they messages, variable values or whatever - you only need one **PRINT** command for the lot of them. That dreadful line above becomes.

SUMMARY

We've seen that many commands have numbers which control them: these numbers are called operands. In the last few instalments we saw how variables can serve as operands. This time, we've seen that an operand can in fact be an arithmetical expression like '`a+10`' or '`c-d+32`'.

You can perform all the normal arithmetical operations, but some of them use unfamiliar symbols. While 'a' plus 10 is just '`a+10`' and 'a' minus 10 is '`a-10`', 'a' times 10 and 'a' divided by 10 are '`a*10`' and '`a/10`' respectively.

Expressions aren't just useful as operands. They can also be used in assignments - the commands which assign values to variables. Things like '`a=b`' or '`a=45*b`' are fine. You can take this even further with assignments like '`a=a+10`' which increases 'a' by 10, and '`a=a*2`' which doubles 'a'.

`??"This is message number";b;" out
of a total of ten"`

This time you don't need any colons, because you're not trying to separate different commands. The only command in the line is the question-mark at the beginning, meaning '**PRINT**'. The rest of the line is just the material you want printed - we call this the *printlist*. The semicolons between the different items not only separate them, but also make sure the CPC prints them all on the same line of the screen.

Although **PRINT** was one of the very first commands we covered, we saw it there only in its simplest form. When we met **FOR-NEXT** loops a couple of issues back, we came across another use of **PRINT**. This little program shows both forms of **PRINT** command at work:

```
10 PRINT "And now for a whole
load of numbers"
20 FOR a=1 TO 10
30 PRINT a
40 NEXT a
50 PRINT "That's all folks!"
```

The **PRINT** commands in lines 10 to 50 each put a message on screen, while the one in line 30 prints out the value of the loop variable 'a' for each pass through **FOR-NEXT** loop.

This much you've seen before in other forms. Now try typing in a new line between lines 20 and 30.

`25 PRINT "Number";`

Note the semicolon at the end of the line. Don't put a colon there by mistake, or you'll miss the point of the exercise.

You won't be surprised to find that line 25 prints the message 'number' on screen. Up till now, each **PRINT** message has gone on its own separate line of the screen.

Every time the CPC gets a **PRINT** command it puts the message (or variable value or whatever) on screen and then moves down a line.

It does this because the CPC assumes you'll want the next message printed on a separate line. You can see this very clearly indeed if you add this new line 35 to the program:

`35 PRINT`

When you now run the program you find it leaves a blank line after each 'Number' message. The **PRINT** command in line 35 makes the CPC move down to the next line of the screen, even though there isn't any message to print.

As we've seen, the CPC assumes that it's supposed to move down a line after each **PRINT** command.

The semicolon on the end of line 25 tells the CPC to stay on the same line, and this means that line 30 prints the value of 'a' on the same line as each 'Number' message.

Next month we put our newly acquired knowledge of printing to work

WHAT USE IS A CPC?

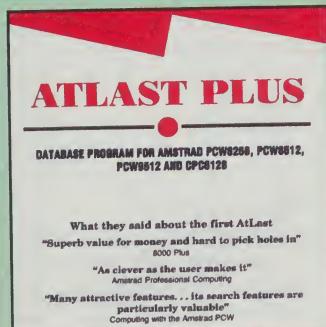

So you can shoot aliens with it. What else can you do?
Steve Carey hears the views of some serious users

In the month that sees the launch of The Sinclair Professional Series PC 200 (see AmScene), it is worth pointing out that the CPC itself is used by precisely the groups of people the Sinclair is aimed at. On the one hand there are the games aces, who value the CPC's sound and graphics capabilities; and on the other there are the serious users, who

know that the CPC has been greatly underestimated as a small business/word-processing machine. But don't think that the two groups are mutually exclusive: some of the fiercest joystick waggles by night are respectable business users by day, and many Protect and Tasword users play a mean game of Driller or Bard's Tale when they think

no-one's looking!

So Steve Carey set out to discover just what serious CPC'ers do with their computers. And he was surprised to discover just how diverse are the businesses and enterprises that depend on CPC - from magazines to burglar alarm catalogues, and from indexing slide collections to teaching computer literacy...

Rational Solutions' *AtLast Plus* is the brainchild of Mike York, who wanted to write a decent accounting system, but found himself dissatisfied with the database programs available at the time for the CPC.

'It's quite normal on CP/M database programs', says Mike, 'to have to re-sort an entire file - which can take hours on longer ones - after adding a new record or editing a key field, because automatic index updating is rarely incorporated. And often you have to use upper case names if you want alphabetical sorting, because normal ASCII sorting puts all lower-case letters after all upper-case letters!'

So Mike wrote his own. 'Getting a new program on the market when you are a one-person business and have no reputation is a very difficult task', he recalls: 'My biggest problem was getting people with influence to take a serious look at it'.

'One way and another the accounting program has been indefinitely postponed, since publishing, marketing and maintaining *AtLast Plus* has taken nearly all my available time. Anybody out there want an administration and marketing job so I can get on with some programming?'

Peter Dance - who admits only to being 'on the wrong side of 40' - bought the original *AtLast* when he bought his CPC. (He discarded his green screen monitor, by the way, and installed a Philips amber screen instead - even though Amstrad told him it couldn't be done!) 'Over the two and a half years since then', he says, 'I've found that *AtLast Plus* has

subtly added features, making printer control easier, for example, with fewer keystrokes and so on'.

Peter - 'I never play games on my CPC: it's policy' - uses *AtLast Plus* to run a colour slide library for Air-Britain (Historians), an amateur historians' organisation, of some 6,800 items (allowing for duplicates it's nearer half a million!). They're indexed by slide number and aircraft type, for instance, and the instant, no-sorting method of *AtLast Plus* is a big boon.

Peter - a busy man, clearly - also uses it to run a kit car owners club database (CCLUB) for the Charger Club,

and admits that a properly relational database might be of assistance, but claims to manage perfectly well without it.

He's done cheque reconciliation on *AtLast Plus*, too - 'Some people use spreadsheets, but with a bit of ingenuity a database is quite sufficient' - and has clearly experimented and tested it to its full potential. 'Certainly from the point of view of general usefulness there's no application I've required on my CPC that *AtLast Plus* hasn't been able to perform'.

See Special Offers at the back of this issue for a very special deal on *Atlast Plus*

Win the pick of the pack!

Perhaps we've whetted your appetite, suggested some possibilities you've never seriously considered before?

We have? Good. Because we have a whole heap of software to give away, and very soon the first half dozen names we pull out of the AA bag will be opening a large parcel containing the following pile of CPC software goodies:

Competition not open to employees of Future Publishing, any of the participating companies or their relatives. Sorry mum.

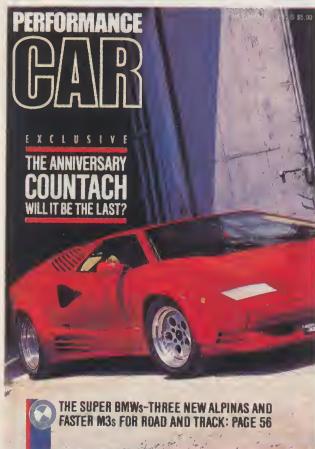

- Mini Office II, the best-selling budget word-processor-cum-data-base-cum-spreadsheet-cum-comms...;
- Money Manager, the financial management package ideal for personal/small business use;
- Parrotty Plus, the art package Pat 'Picasso' McDonald rated as 'one of the most useful programs ever

released for the CPC range'; ● and Protect, the word processor used here in the AA office (but don't let that put you off!).

So simply send your name and address on a postcard or the back of an envelope (positively no envelopes opened!) to: AA Serious Comp, Amstrad Action, 4 Queen St, Bath BA1 1EJ, before November 30th 1988.

CPC performance!

Jesse Crosse, editor of *Performance Car*, is convinced that, the CPC, with *Protext* and *Promerge*, is 'vastly underrated. There are things you can do on it and with it ten times better than with the 16-bit business machines everyone's always raving about - and they cost ten times the price!'

Jesse knows what he's talking about. He introduced the CPC and *Protext* into AGB Specialist Publications which now uses about 50 of them to do everything a publishing company has to do - 'from journalists writing copy, to secretaries typing letters and sending out individually addressed letters to competition entrants'.

Jesse has written a number of programs himself to exploit

the full 'vast potential' of *Protext* and *Promerge* - which, as he points out, can be made to double as a database with full multiple criteria search facility.

All the journalists on *Performance Car*, as well as many other people working in the company, use Jesse's specially devised phonebook program. 'Even with ROM-based *Protext*', Jesse points out, 'you can have a bootup, as we do, which loads my phonebook onto a split screen, so it's effectively memory-resident while you work on the top word processing.'

It works using *Promerge's* mailmerge facility with the printout, obviously, to screen. And you get around the file-length limitation by having 26 files entitled

ADDRESS.A, ADDRESS.B
and so on. That also helps cut down on the search time that's inevitably a problem with hundreds of entries. (Of course the real drawback about such a

phonebook program is persuading people to spend the time keeping it up to date!')

The most amazing thing Jesse has so far done with *Protext*, however, is a truly remarkable roadtest generation program. As you'd expect, a magazine that tests Porsches and Aston Martins every month (it's a hard life!) must produce an elaborate 'Roadtest Specification' that details such things as fuel consumption, acceleration, bhp per ton and per litre and so on. So Jesse wrote a program...

It's the car journalist's nightmare, that simple little panel. It used to take 41 calculations and easily several hours' work. So over a period of time I wrote something in *Promerge Plus* that runs to 13 feet of printout to do it all for you. You simply key in the data and it does all the calculations for you - it even asks you whether the test vehicle is automatic or manual, and adjusts the figures accordingly!

'Then it merges the results into a standard form file and prints out all the results in panel form.'

Have you considered making such a program commercially available? 'Oh no. The thing is, it's obviously limited to magazine work, and more particularly car mags - in

See here!

- AA13: seven page special devoted to making music with your CPC. (And see also AA26 for everything you ever wanted to know about Midi.)
- AA18: comparative review of: Pyraword, Protext, Tasword, Mini Office II, WordStar, NewWord, and the educational package Pendown.
- AA23: set of excellent tips for Tasword, Protext and Wordstar.
- AA29: six top spreadsheets compared - Cracker, First Calc, MasterCalc 128, Matrix, ScratchPad Plus and SuperCalc 2.
- AA30: five top databases compared - Random Access Database, Ultra-base, AtLast Plus and Masterfile III.
- AA32: survey of available educational software.

other words, the competition. And I'm damned if I'm going to let them have the advantage we've got!'

So the CPC is capable of more than it's usually given credit for? 'Absolutely! It's a fantastically powerful machine for the price, and it's tragic that everyone's underestimated what it can do. With a CPC and *Protext* you can run a ridiculously cheap operation - actually I would say it's superior to something like *Wordstar* on an IBM, but no-one would believe me!'

Frankly, no-one's even remotely plumbed the depths of what *Protext* can do. If you look in the nooks and crannies of the manual (very well written, by the way), you can find all sorts of things - invoicing using *Promerge*, for instance - that most people don't even dream of doing. You really don't need a very big brain to make it do some very interesting things'.

So why have so few people in business tumbled to all this? 'Probably because it's not the industry standard. Everywhere you go you find IBM PC's - but look at how much they cost!'

TELETEXT

A world of information
at your fingertips

A Microtext Adaptor turns your 464 or 6128 into a sophisticated Teletext Receiver. Giving you access to any of the hundreds of free pages from Cefax or Oracle. As well as up-to-the-minute news or football results, there's the local weather or even bargain holidays. And Teletext caters for special interests, like computing, motoring, or gardening, you'll find things to do and places to go in your area plus much more.

But unlike a Teletext TV, a Microtext Adaptor allows you to do a lot more with the information, you can save a page to disc or cassette, perhaps to keep a watch on share prices, or print pages like what's on TV. There's free software too! Amstrad software is broadcast in a special format on Channel 4 for Microtext users to download. Plus you can access and use Teletext data from your own programs, providing endless possibilities.

The Microtext Adaptor fits neatly on the expansion port, it comes with software and is very easy to use. Just connect it with the lead supplied to the VIDEO OUT or AV socket of a video recorder and change channels with the controls on the video or, there's our own Tuner which has been specially designed to provide the signal that the Adaptor needs, plug in an aerial, it tunes itself in (!) and channels are selected from your keyboard. Tune into Teletext, a world of information at your fingertips.

'A well thought out product that performs admirably.'
Amstrad Action Sept. 88

A Microtext Adaptor for use with a video is only £74.95 Adaptor and Tuner just £124.90 Prices include p/p & VAT.

Instructions are provided to transfer software to disc. Disc's are available for £5.00 extra

ONLY £24.95

Incl. VAT, P&P

Financial management software for personal and/or small business use

Money Manager is an easy-to-use system for recording all financial transactions, and for analysing them in a number of very powerful ways in order to facilitate sound financial management. It is ideal for controlling the finances of a small business, or for users wishing to control their personal finances in a business-like way. Use it to check bank statements, keep track of expenditure, monitor cash flow, make budgeting forecasts, prepare business financial statements, pacify your bank manager, convince the tax and VAT inspectors, avoid nasty surprises, etc. etc.!

12 months of entries are kept in a file stored on your disc. At any time, you may load a file into the computer memory, add to or edit the entries, analyse them, print statements, and then save the updated file for later use. Entries may be historic (for record keeping) or forecast (for budgeting). You may have any number of separate files, and make copies of files for archive purposes. You may advance the period covered by a file month by month.

Up to 100 separate transactions may be entered per month. Each entry consists of:

- The day of the month, e.g. 23rd of June.
- An account number, one of up to 9 defined by you to suit your circumstances e.g. 1=Barclays, 2=Visa, 3=Halifax etc.
- Reference, e.g. ABC123 for a cheque number or invoice reference.
- A class code, one of up to 50 defined by you to suit your circumstances e.g. h0=Household expenses, h1=Mortgage, h2=Rates or p0=Production, p1=Raw materials, p2=Assembly, p3=Packing, etc.
- A description so that you can see what each transaction was for, e.g. "New gearbox" or "Box of 10 discs."
- An optional single character mark which you may include for further classification, e.g. b=business, p=private, etc.
- The amount of the transaction, which may be plus or minus.
- A marker to indicate whether the entry is exempt, zero rated or taxable for VAT, or alternatively the actual VAT paid.

You may select categories according to account, class and mark (e.g. all entries, or all motoring expenses for business using a credit card, etc.) and produce reports on the screen or printer as follows:

- Full detailed statements, showing each transaction for any month or for the whole year.
- Detailed monthly VAT statement showing input and output amounts excluding VAT, the actual VAT and the total amount, plus totals and net VAT due.
- Tables showing the totals in each class for each month of the year.
- Tables showing the totals in each class for each account.
- Tables showing monthly maximum, minimum, average balances, turnover, cashflow etc.
- Bar graphs of any category month by month.
- Pie charts of annual totals for various categories (CPC version only).

Plus: standing orders—entries optionally sorted into date order—item search facility. Comprehensive manual and full set of practice data included. Full telephone support.

Send cheque or credit card number or phone for immediate despatch

Write on with your CPC!

Protex, written by **Gavin Every**, was first released back in August 1985, with **Prospell** and **Promerge** emerging (sorry) in April of the following year. Talking to **Mark Tilley** of **Arnor** is a breath of fresh air, for he claims that **Protex** is still selling in 'respectable quantities', and indeed boldly asserts that it has overtaken its rival, **Tasword**, as the biggest selling CPC word-processor. (For the remarkable story of how a whole publishing company runs on **Protex** on CPC, see elsewhere in this article.)

Chris Garrett – yes, the **Garrett** of the AA cartoons – runs a whole business simply using **Protex**. Chris has an enormous stock of pop music magazines of the last thirty years featuring artists from the Beatles to Bros (whoever they are), hotly sought after by fans all over the world. (He's having an extension built to his house just to contain

them!) He simply searches his **Protex**-based catalogues of some 4,000 items (and rising) and copies references into a separate file, printing them out and sending them to the person who made the request.

But what about the file length limitation? Well, I can get a run of about eight or nine years of a music paper onto one file, and that's quite sufficient. As far as I know, I'm the only person in the country doing it this way, he claims: 'there is someone else in the same line of business – but he still does it all on typewriter! I could cry when I think of the wasted effort: **Protex** is only a word processor, but it's ideal for shuffling round vast wads of indigestible material'.

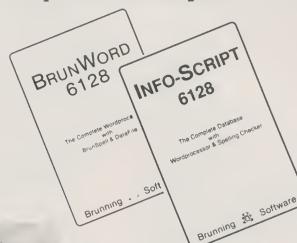

Still, even Chris baulks at using **Protex** for his accounting!

Rev. Peter Amies, a Baptist minister who is one of ten area representatives for the Baptist missionary society – and they all have CPC's! – has used both **Brunword** (recently upgraded to **Infoscript**) and **Tasword**, and comes down very firmly in favour of the former. (He does, however, miss one **Tasword** feature, which indicates whether you're in lower or

upper case and can convert upper back to lower at a stroke.)

Rev. Amies, 61, had some previous experience of computing, using a Spectrum for a number of years. Nowadays, however, it's the CPC and **Infoscript** that helps him word process articles, sermons and seminars. He also uses **Taspri** for producing notices and captions for photographs.

The update to **Infoscript**, he says, was a 'marvellous' idea, with an 'excellent dictionary that's fabulously fast compared to **Tasword**'.

Peter Ashton runs **Pass Alarms** with the assistance of **Brunword**, and more recently has upgraded to **Infoscript** – which integrates the word processor with a database.

Peter, 31, runs an alarm installation company by mail order, and runs his catalogue on **Infoscript**. He has two databases, in fact: one for installation details, servicing

and so on; and another for my catalogue'. And he uses **Brunword** to draw up wiring diagrams (!), with numbered wires and grid matrices of dashes and dots.

I had previously used **Tasword**, Peter recalls: 'but I found it lacking when it comes to justification and spell-checking. I saw **Brunnings**' offer of a week's free trial and decided to take them up on it. And I got hooked'. The main difference, he finds, is sheer speed, which he finds 'quite remarkable' in **Brunword**.

One problem Peter shares with many users of databases is the time it takes initially to enter the data: 'Getting things going is time-consuming. Every house is different, of course, and I've amassed lots of different estimates. But I'm beginning to find now that I can patch and paste pieces from already existing files to make up new ones'.

'It's a super program', he concludes, 'and the CPC is a super machine. I'm perfectly happy running my business with both'.

Taste for accounting?

Accounts programs for the CPC are something many of us imagine we could probably write if only we had the time. Indeed, they typically get written for the benefit of the author him/herself – another one, called disarmingly *Simple Accounts Routine* is out very soon (£15 from Douglas Thompson, 8 Hyholmes, Bretton, Peterborough PE3 8LG).

The story of *Money Manager* is typical. Gavin McHamish, who wrote the program, has an engineering background and wrote the original program for his own benefit when he found there was nothing commercially available to do what he wanted. So in 1986 *Money Manager* was born. Now in its third incarnation this 'financial management soft-

ware for personal and/or small business use' is still going strong.

Our review, way back in 1986 (remember reviewer Bertram Carrot?) judged that *MM* has 'detailed analysis of accounts' and makes 'good use of screen displays and graphics'. The main reservation – a general one about accounts/personal finance packages – was to wonder how many people have the self-discipline to continue updating their figures after that initial surge of enthusiasm has gone.

We spoke to John Willrich of Southampton, who has been using *MM* for eighteen months and finds it immensely useful. Not only does he use it for keeping up to date with his own incomings and outgoings, but as an executor of a relative's will he found *MM* indispensable.

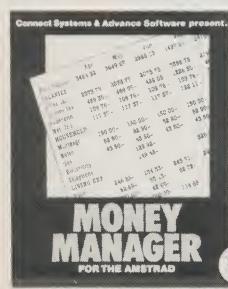

Recently John (who's 56 and works at the Motor Museum at Beaulieu) went on holiday to the States and decided to calculate just how much it had really cost him.

Using *MM*'s class code feature, which enables the user to sort by type, he discovered that he'd actually spent something like twice as much as he'd thought!

Although in general he's delighted with *MM*, there are two niggles he has: the column for entering the description of the item of expenditure could be a little larger; and once a reference – such as a cheque number – has been entered, it cannot be completely erased: something (a zero, for instance) must remain.

'Obviously you don't rush to your CPC every time you buy a stamp, but if you keep a record of your cheques and credit cards, standing orders and so on, you can keep a good track of how much money you really have left.'

All in all, John finds *Money Manager* 'super', but adds: 'It's only as good as you are. If you're prepared to stick with it, it's excellent. But if you're not, you might as well carry on working out your expenses on the back of an envelope!'

Mini Office II

Talk to Database, the people who produce the bestselling *Mini Office II*, and you'd think the CPC was going to make a late surge to take over the world. This combined word processor, database, spreadsheet, graphics, label printer and comms package has sold by the lorry-load.

When the enhanced version of *Mini Office* appeared in early 1986 it was claimed that 26 man-years had gone into the programming. Whatever

the truth behind that claim, the money was certainly well invested. It's sold in tens of thousands across a variety of formats – with Database claiming the unbelievable total of 400,000 total sales!

Now they've planned extensive advertising and offered an extra discount to dealers – which suggests a refreshing faith in the CPC marketplace.

Martyn Newman, 35, is Deputy Manager of Stockport's YMCA Information Technology Centre, and he has used *Mini Office II* to train YTS workers in basic computer literacy. For two years he took ten or a dozen trainees at a time on a City and Guilds Course developed in conjunction with the CBI – a course he has successfully sold to a number of YTS managing agents. If anyone knows *Mini Office II*, he does.

'It's a very robust package', he says: 'and while you get only what you pay for – as always! – it's very good value for money.'

'Of course, it has its limitations. When you're used to *Supercalc II*, as I am, a spreadsheet which is limited to so many columns and so many rows, and in which reformatting a sheet is so difficult, takes some getting used to. Similarly the database is restricted in that it's all memory based, dependent on RAM capacity rather than disk space.'

'But perhaps I'm not applying the correct standards here. *Mini Office II* is a tremendous package at the price – it can't be beat. And for people who've never touched a computer keyboard before – the people I'm teaching – it's an excellent tool.'

'It's like the CPC itself, really. For 80% of individuals and small firms it's ideal, especially if you haven't the funds to splash out £2000 or more on a business machine'.

Art for CPC's sake

Treasure Island first released *Parrotty* in late 1986, and *Plus* in May of last year. When we reviewed *The Informer* (AA33), the latest in the Treasure Island stable, Pat McDonald called it 'one of the most useful programs ever released for the CPC range'. But a dynamic program such as this is not far short of impossible to demonstrate without you seeing it in action, so **Merv Rogers** – who wrote the programs – has recently had the bright idea of boosting sales by selling a £3 demo disk of what this art/display package is capable of.

Barrie Knight of Mortimer, Berks, produces his Christmas cards using *Parrotty Plus*. The pattern was drawn on a FACIT 4550 A4 6-pen plotter, driven by a utility produced by Treasure Island. He's very happy with the results.

Among art packages, **Rainbird's Advanced Art Studio** is one of the best and certainly one of the most popular.

Martin Christmas, 25, who's in retail management, is very impressed. 'I use it, for example, for editing and printing out loading screens of games', he says. 'The only trouble I've found is getting to grips with the various colours – that took a while to master. And the pass-word protection, while I can understand why they did it, is a real pain. Still it's excellent value for money'.

Chris Raby, also 25, of Nelson has been using it for 18 months and still returns to it

regularly. 'It's exceptionally good', he says: 'My only complaint is that when you change between modes the picture you're working on tends to get scrambled'.

Benjamin Nugent agrees. Ben, 11, got it a year ago as a present (for passing an exam!), and still uses it 'quite often'. He sometimes loads in loading screens from games (*Paperboy* current favourite) and prints them out. He's impressed with the quality of print-out, though he wishes it had a greater magnification than 8x8, and hates typing in the password every time! All in all, he considers it one of his favourite pieces of software.

As does **Geoff Balding**, a postgraduate student. As a user rather than a programmer, he relies on other people's efforts, and when he read the consistently favourable reviews of *Advanced Art Studio* he decided there must be something to it.

'Getting used to the way it works takes some time', he says, 'especially the drop-down menus. But I'd used *Screen Designer* and *Melbourne Draw*, and this is better even than them'.

Any problems? 'Yes, one or two. Setting things up to do a hard copy isn't as easy as I'd like to be – especially with my printer (DMP2000)! Scaling is difficult, and you've usually got to try a few goes to get it right'.

Sounds good

Although the CPC's sound is not perhaps anything to write home about, in *The Advanced Music System* Rainbird have still managed to produce a popular and much appreciated package.

Scot Allan MacBain, 23, bought his about nine months ago. Even though his job as an Assistant Scientific Officer in the Civil Service doesn't allow him much time for such things, he's been putting musical scores onto CPC and adding the words underneath. He's a guitar player, and appreciates the opportunity this allows him to hear what songs should sound like.

'It needs getting used to', he says, 'but after two or three weeks you're away. Of course with only three channels you're never going to get great sound from the CPC, but that's a limitation you just learn to live with'.

And **Ben Nugent**, 11, whose instrument is the piano, is happy copying music onto computer, even if it is time consuming. He's still using it quite frequently after a year, and reckons anything that you're still using after that length of time must have something going for it!

Apologies to all those who sent photos, many of which were held up by the postal dispute. And perhaps the gentleman who sent in two large black and white photos in an envelope postmarked Ruislip might write and tell us who he is...

SOUNDS SPECIAL

Now you can be in harmony with your CPC – Pat McDonald takes centre stage and conducts a review

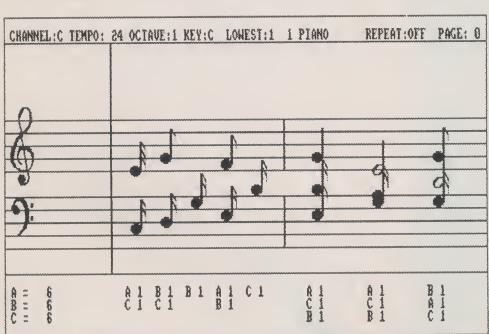

MICRO MUSIC CREATOR

First Byte Software • £9.95 tape, £14.95 disk, £24.95 ROM
71 Barn Glebe, Trowbridge, Wilts. BA14 7J2 • 0225 765086

First Byte Software is one of those low key, low budget operations that occasionally advertise in the AA Small Ads. That sort of pedigree isn't widely regarded as a hallmark of brilliance, so the question is: does this product have anything going for it?

Micro Music claims to let you compose your own pieces using up to three voices. All well and good – other programs have similar claims. But this one is special, in that you can play back your tune under interrupt, that is as a background task while you type in listings, write letters or whatever.

That's not all, because a sound sampler or digitizer is included too. That's hardware and/or (as in this case) some software that can pick sounds up from a tape played into the computer, analyse it and then reproduce it at a later date. The sound can be changed around, speeded up or slowed down and even played backwards. Theory the for much so (think about it!).

• If only you could hear this! (If only we couldn't – ed)

In practice

The tape/disk/ROM has a colour label, rather than a handwritten scrawl. Documentation for the product – an A4 manual – is good, though it's a pity it's photocopied rather than printed. An amendment sheet is included as well – tut tut!

You are presented with a menu of options featuring the above two functions, a sampled demonstration, a 'free' game and a help program. Selection is by number, and your Amstrad mumbles, shouts, squeaks, grunts or says that number when you press it.

Using the 'Compozer' (why spelt wrong?) is easy. I tried the usual test of attempting to use it without reading the manual, and it was a piece of cake compared to some of the other music programs around – a big achievement given its complexity.

Graphically you are presented with a central stave area, and a status line above and below. The top one reads: **Channel** (A to C), **Tempo** (value from 2-100), **Octave**, **Lowest** (note), **Piano** (which envelope selected), **Repeat** (On/Off), and **Page** (no.). The lowest window keeps track of the number of notes used in each channel – up to 500 in each – and indicates each note's channel and envelope value.

The musical stave is full height, so music can be transcribed across four octaves. Note values range from demisemiquaver to semibreve, which should cope with most musical pieces.

Dah dah dah DUMM

Putting music into the system is easy. The cursor can be moved to any part of the stave, and you use it to decide on the pitch of a note. Numerical keys 1-6 dictate the duration of the note. The

channel in which the notes is played can be changed either by using the numerical keypad or through a pull-down-menu.

Micro Music automatically scrolls when you reach the edge, and a faint shadow line is drawn to indicate overlapping pages. All bar lines have to be put in manually, but that will probably come in useful for irregular time signatures.

Envelopes can be edited and swapped around within a sub-program of the Compozer. This section is not well documented – understandable given the pages devoted to the subject in every CPC user manual.

For someone who's virtually tone-deaf, like me (*I'll second that – ed*), the program is informative. Certainly it can be used for ad-hoc education on the subject. I doubt if it will prove as popular as Rainbird's *Advanced Music System*, which can print pages out and has more features in general – but then again, that program doesn't have a sound sampler.

Singing CPC

The ROM version has a small idiosyncrasy – when the machine starts up, a sample of a manic laugh plays. An original start to anyone's working day...

The onscreen design is up to the same high standard of the rest of the page. The top part has two menus: when a sample is recorded, it is displayed in the middle/lower section as a series of vertical lines, apparently drawn at random. After messing about with the package for a while, it dawned that the start and end points of a sample were fairly easy to work out from this.

Using the package is so simple I'm only giving it one paragraph. First, you record a sound onto a tape. Then you select the **Record** option, and play the tape. Your CPC reads the sound into memory. After that you can edit where the sound begins and ends, change its speed and even play it backwards. The playback option can be used to check it's all going well. Sample standard is a bit hit and miss, and you'll need to experiment with sound level to get the clearest results. Permanently storing the sample on tape or disk is a cinch.

So what can you do with these weird and wonderful sounds? The manual explains how to play them from within your own programs, and your next version of Pac Man will knock spots off the competition – you can really hear the munching and gobbling noises... As an example, the 'free' game, *Empty Tummy*, is a really worthwhile little maze game, made special by the samples. Similarly, including musical compositions to play within a game (under interrupt!) is also well detailed in the manual. That makes *Micro Music* attractive to programmers – it's the one feature the competition, including AMS, lacks. For professional music composition, however, I'd still recommend the Rainbird package.

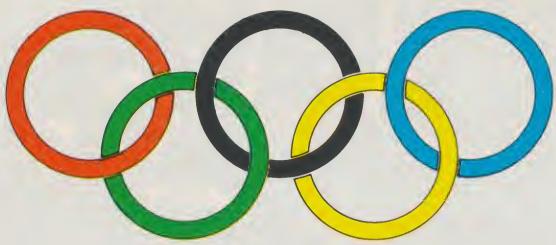

Most of the Amstrad owning population should go for *Micro Music Creator*. It's user-friendly, fast, has a large note capacity and the ability to sample. But above all it's a damn sight easier (and more fun!) to use.

GOOD NEWS

- Value for money.
- Sampler and free game.
- Sounds can be played while doing another task.
- Available on ROM.

BAD NEWS

- 'Compozer' lacks some features.

Will the Olympics come to Manchester?

The gold medalist of computer shows is on its way back to Manchester's imposing G-MEX centre.

Amstrad and more than 70 other exhibitors will be displaying the latest products for you to try before you buy.

Need some technical help? Leading experts will be on hand throughout the three days to answer all your queries.

With hundreds of special show offers available, every visitor could end up a financial winner.

You can even save yourself a £1 before you get there by using the advanced ticket order form.

How to get there

Driving? G-MEX is in the city centre - only one mile from the M602 - with ample parking available. It is also within easy reach of Victoria and Piccadilly railway stations, and Chorlton Street bus station.

WE WILL!

AMSTRAD ST.

Be prepared for a warm welcome in "Amstrad Street" - a brand new show feature area, specially constructed for the event.

Take a stroll down the street and see how Amstrad machines are playing a major role behind the scenes in the current northern boom.

- Drop in on the "Amstrad Arms" our answer to the "Rover's Return".
- Visit "Amstrad School" and observe how students in the north west are benefitting from the new technology.
- Check out what's going on in a local company where Amstrad machines are providing them with the competitive edge.
- Inspect the Amstrad innovation workshop.

And much, much more.

It will be an unforgettable experience.

Zenith Software offer you £3 off Z-Pack
If you order from them before November 30th,
Don't forget to enclose this coupon and say AA sent you!

HACK PACK

The complete Z80 machine code tool-pack, according to hack P. McD.

Z-PACK

Zenith Software • £10.95 disk • All CPC's • 11 Bude St, Appledore, Bideford, North Devon EX39 1PS

Sharper readers may have noticed a few ads for Z-Pack in AA over the past few months. Zenith is a small company based in out-of-the-way Bideford – but they could be going a long way, judging by Z-Pack, a new product aimed at the more serious enthusiast. It's a toolkit for examining the routines hidden away in machine code programs, and could well prove popular among those many people who enjoy hacking for fun and for *Cheat Mode*.

On the disk are two slightly different versions – one suitable for 64K machines, the other containing more features to explore the extra memory of a 128K machine. Enclosed with the disk is a small, A5 manual, printed rather than photocopied. Well written and informative, it explains well just what you get for your eleven quid.

• Taking a quick peek at the disk ROM

The memory of an editor

When you run Z-Pack, you are taken to the first option, **Memory Editor**. A bewildering array of information is placed onto the screen. Time to get the manual out to decipher it all... In a memory editor (we've printed some in AA) you have a pointer that indicates a particular byte in memory. Onscreen a list of the bytes is displayed, generally in Ascii as well as hexadecimal. Using the cursor keys increases or decreases the memory pointer, and the screen display scrolls to show the new memory locations.

Typing with the numbers 0-9 or the letters A-F (upper or lower case) alters the contents of the byte which the memory pointer is looking at. The memory pointer is automatically incremented, so that typing large amounts of data can be done at a fair old speed.

Using it is easy: you just scroll around looking for a likely piece of code. Ascii messages are easily seen, so changing program start up messages, high score tables and similar data is pretty simple. For the technical, pressing the **CLR** key toggles between interpreting bit 7 of the data and ignoring it. Similarly, **TAB** lets you alter the Ascii interpretation of the memory as opposed to the default hex.

Running across the top of the screen are some useful tidbits about the program. (If you're not into assembler they won't mean very much, and can safely be ignored.) First there's the version (64/128), update number and the address of the memory pointer. Next comes the byte's contents in hex and binary values, and then the address made by combining the present byte with the next byte in standard 'lo-hi' format, displayed in hex and decimal.

Once you have found some code to look at, the **disassemble** option is ready and waiting for you to start looking at it. The

While we're on the subject

More block commands to exploit are included, enabling you to Alter a series of bytes in a similar way, for instance dividing them by two or ANDing them with a bit mask. You can also Move blocks of memory around.

Searching for a given set of bytes is also possible, though it's a bit of a bind – the program defaults to hex, and Ascii characters must be preceded by a dollar sign.

Finally there are the Print/Save blocks, which behave much as the **disAssemble** functions. They deal with bytes rather than assembly instructions however.

options available with this function are good: you can **semi** to **screen**, which means disassemble to an onscreen window: **Full** to **screen**, where you use the whole display for disassembly: **Block to printer** and **Block to disk**, where a file is sent to the relevant device. In the latter case, this could enable you to load the source code into an assembler – necessary for larger scale changes to code.

Actually marking a block out for the two previous features is no hassle. All you have to do is go to the start of where you wish to mark, press a key, then go to the end and press a key.

Of final note in the league of major features is the ROM/RAM selection. The lower ROM can be switched on and off, as can any of the upper ROM's, from 0-251. (If anyone actually has 251 upper ROMs connected, we would be delighted to hear from you. Four megabytes is, as we technical boids say, a *fair old bit of memory*.) If you have extra RAM banks these can be paged in on the 128K edition, and the screen base set to either the normal (49152) or lower (4000) setting. The manual's explanation of the extra memory, however, is disappointing.

Leftovers

Other commands have been included to help you control and understand Z-Pack better, including a help page, the ability to access nearly all the Amsdos commands (exception=USER), start execution of a machine code program, set the memory pointer without endlessly scrolling the text, and so on. Breakpoints are also implemented, although they are not conditional.

Most interesting among these is a rather nifty hex calculator. How often, when machine code programming, do you reach for a pencil and paper to do a quick sum? Not only can Z-Pack add, subtract, divide and multiply but it can also perform logical operations – **OR**, **AND** and **XOR**. The answer is displayed in hex, decimal and binary. This function is genuinely useful, and it's the first time I've seen it in a disassembler.

Without doubt this is one of the best disassemblers around. The screen update is fast, the disassembler can scroll up as well as down and the calculator saves messing about. Z-Pack lacks conditional breakpoints, however, which can be vital, and it takes a lot of memory – around 10K. It can't break into machine code on its own – other programs must be written or bought for that. Any chance of a ROM or Multiface version, Zenith?

GOOD NEWS

- Fast, easy to use, soundly priced and good manual.

BAD NEWS

- Non-conditional breakpoints.
- Breaking into programs is your own problem.

WORDS WORK

Pat McDonald celebrates the timely end to the postal dispute

What's that familiar shape striding through the morning gloom? Can it be, yes it is, a postie! Carrying a huge sack, wow hasn't Christmas come early this year. One problem - all the letters are marked Words Work. In the absence of anyone of that name, I suppose I'd better open them...

Enquiry

Have you ever reviewed Microfile/Microword in your magazine? They came as part of the package when I bought my CPC6128 and I wondered how it compared with other word-processors and databases. Looking back through my old magazines I can only find one mention of it in a reader's letter.

I am new to computing (no printer to try them on until the end of the month) but I found both programs reasonably easy to use, and I would like a spelling checker that would work with it. Do you know of one? Or would I be better off buying a new system?

Margaret Hague, Rotherham

We reviewed Microfile in AA9. In short, it stated that the program was good from a beginner's point of view. It had a

well written manual and was quite easy to use. It lacked sophistication, but was a good starting point. I'm unsure whether that is the same as what you are referring to - it was by Cornix software.

Prospell, the spell checker from Arnor (0733 239011) costs £24.95 on disk or £34.95 on ROM chip, and works well with most word-processors.

Inspiration

For months, since I got my Copal SC-1000 printer (secondhand and without instructions), I've tried to fathom out how to do underlining. I guess the machine is capable as it has the sophistication of proportional spacing so surely must have the everyday 'common-or-garden' underline! I've tried all codes with no luck at all.

Suddenly I've hit upon an alternative successful idea. Sending 27 51 x sets the line spacing to x/216 of an inch. I tried sending zero, and - you've guessed - the print head stayed where it was. I can then send the usual underline character (you know: shifted 0) as the next line. It works a treat. Then use 27 51 36 to revert to normal. The same trick can be used for double strike by holding the line spacing and repeating the same line

of data.

It's a relatively simple matter to alter word-processor printer control codes - two are necessary for the above. In Tasword go to the Customize program option, and reply Y when it asks if you want to change the printer control codes.

Great stuff for a beginner, eh? Of course, if anyone can out there can supply the genuine codes for the Copal, that would be better still.

Jeff Ison, London

C'mon everybody!

Words Work is hugely popular. So if you want thousands of people up and down the country to laugh at, criticise, or (the majority) appreciate your word-processing tips and problems, send them in!

We want your mail! This section of the magazine depends on you. Get your contributions sprinting towards:

Write on

The cheapest printer on the market is the Citizen 120D, which I used for 18 months or so until I moved upwards (?). It is quite fast, printing a packed page of text of 4000 characters or so at a measured 19 cps in pica and 21 in elite. It boasts a good range of facilities: IBM characters, 8 bit control codes to use them, double height and reverse print, auto-feed for single sheet and a very good handbook. It costs around £140, including VAT - but you'll have to look hard for them.

The only sour note is the NLQ, which at least is better than the DMP2000/3000. (Then again, there's not a lot that isn't - Pat.)

Of the 24-pin machines, the NEC P2200 is worth investigating.

Compared with the Amstrad LQ3500, it is faster, has better print quality, more facilities, is easier to use and has a much better handbook. At around £350, it sells at much the same price as the Amstrad.

I strongly advise anyone buying a printer to shop around and, most importantly, try one running in a shop. Run a page of text through it and time the result. The effective speed of many printers is much less than claimed, and I encountered one which ran at little more than half its alleged speed. Check from the handbook, or better still by running test pieces through it.

Also check the facilities it has and whether they work in

NLQ as well as draft. Quite often they don't. If you're looking at an LC10, do make sure that it works with the CPC - some earlier ones didn't.

If the printer can recognise the eighth bit toggle codes, as most do, there is little need for the KDS port. I have been producing the IBM characters for the past two years or so without any need for it. The device is valuable when data is being sent to the printer, rather than characters.

One instance is in redefining character shapes. With the standard CPC, only the bottom seven characters can be defined. Using an 8 bit printer port all of the top eight bits and the bottom one can be selected. (That's why redefined characters with only seven bits appear two rows below normal text.)

However, 8 bit printer ports come into their own when used with print enhancers (such as Qualitas). The reason for this is that such products (and screen dumping programs as well) use graphics, which are unaffected by the eighth bit toggle.

M Catton, Gosport

That's one reason why I don't like the Citizen 120D. The graphics commands are non-standard: many readers write in asking for special screen dump programs. Unfortunately they never give details of their printer's graphic codes...

Mind you, from a word processing point of view, it's an acceptable printer.

That's the way you do it

In September's Reaction, R. Corbett seemed to have a problem with his *Tasword 464*. Your answer, unfortunately, was incorrect. It is nothing to do with the 6128's memory; it's the disk drive. I had this same problem with my *Amsword* when I purchased the DDI-1 disk drive and tried to transfer it to disk. When the Basic program loaded into memory, it came across the **|DISC** command in line 130 and switched to disk operation, then tried to load the **TASWORD.BIN** plus **AMSWORD.BIN** programs from disk. There are no files with this name on the disk, so it comes up with the error.

The answer is to load the Basic loader and delete the **|DISC** command (you could **REM** it if you have Basic 1.1 but the 464 will not allow you to use a **REM** statement), and then run it. When the machine code is loaded and run, return to Basic, add the **|disc** command back again, type **RUN**, and select 'SAVE Tasword (or SAVE Amsword)' – it should save to disk.

By the way, *Tasword 464* does run on the 6128, although it does not use the extra 64K available. If you want to upgrade to *Tasword 6128* from *Tasword 464*, then send Tasman £13.90, plus your *Tasword 464/Amsword* tape. They will return the tape, together with *Tasword 6128*.

As I'm in such a generous mood, I feel that I can help Stephen Godrich with his disk drive. I had exactly the same problem – although it was all my own fault. Playing with the sector editor given away free with the Christmas cover tape, I discovered how

to copy sectors from one disk to another. So I did this with my free copy of *Matchday II* from your subscription offer – I copied the bootstrap program (Track &090, Sector 41) onto a blank vendor disk.

Then, being such an idiot, I ran this (by typing **|CPM**) and my drive made the most horrendous noise. After that it wouldn't load anything. As you may have guessed I was not too pleased since I had bought it just two weeks before!

Now this is the good part – how I recovered the drive! I put a CP/M 2.2 system disk into the drive and typed **|CPM** – the motor started but nothing else happened. So I hit the top of the drive with my wrist. Suddenly it worked! It wasn't just the drive either – I did it twice! Don't ask me how it works – I don't know!

Could you help me on one small point? I bought the VDE 2.31 text editor from WACCI. As you may know it is configured to run from CPM+, but the **VDE.DOC** tells me that it will run under CP/M 2.2.

Using VINST23, I have made it run reasonably but I can't find the codes for 'Scroll up a line' and 'Scroll down a line' for the CP/M 2.2 operating system – it's not in the DDI-1 disk drive manual.

Martin Bullivant, Altringham

Sounds like you may have worked a screw loose somewhere in the drive. I remember having to tighten a screw on the external drive occasionally: vibration loosens it regularly.

AA CASSETTE UPDATE

Tan Kwong Peng of Singapore contributed a rather useful disk formatter program, which could restore disks with bad sectors to full health, to last month's cover tape. The tape was of course tested before being sent to the duplicators. The program consisted of a helpfile, a Basic program file and a machine code program that was used to do clever things to the disk operating system.

The three filenames were: **FORMHELP.BAS**, **FORMPROG.BAS** and **FV.BIN**. Unfortunately, on some copies of the tape the last one was saved by the duplicators onto a tape master using:–

SAVE "FV.BIN",B,&8000,&(110:filename length truncated it.)

Instead of: **SAVE "FV.BIN",B,&A000,&110**. This has resulted in the Basic program **FORMPROG.BAS** being saved again. Bit of a mess up, in fact, and while it was the duplicator's fault we still feel bad about it.

So what can you do?

What you can do

Either: type in this program, and save it onto the tape at the point where the bad file begins. **Or:** send it to Interceptor Ltd, Mercury House, Calleva Park, Aldermaston, Berks RG7 4QV and have it replaced. **But please please please remember to include your name and address so we know who to return it to!** We've already had some people destined to be disappointed because they omitted to let us have this vital bit of information.

BAR CPM

First Steps – part three with Richard Monteiro

Winners of Graduate's goodies will be announced next month. Due to the postal strike the competition entries have only just started to arrive. So come on, you have several more weeks to write your name and address on a postcard or back of an envelope and send it to: **Richard Monteiro's Bar CPM on ROM, Amstrad Action, 4 Queen Street, Bath, BA1 1EJ.**

What do you mean you didn't read the October issue (ahem, September mark II (yes, OK Monteiro – ed)) of Bar CPM and haven't a clue what we are talking about? What were you doing? The prizes on offer are 10 vouchers worth £5 off any of Graduate's products and a totally spondititious copy of CPM on ROM.

DIR is just scraping the surface of CPM's built-in commands. There are five (six in CPM Plus) so-called built-in commands. Many other transient commands exist. Transient commands reside on the system disk and are loaded in and executed when needed. Built-in commands are part of CPM and are always available for your use regardless of which disk you have in the drive. Built-in commands reside in memory as part of CPM and consequently execute faster than transient commands.

Those are the built-in CPM commands. Get used to them: you're going to hear a lot more about them.

We've done DIR to death, so moving down the list we have DIRSYS. (This command isn't available to CPM 2.2 users, but the transient command STAT is. This allows you to do everything DIRSYS manages plus a whole lot more.) Most built-in CPM Plus commands can be abbreviated to the first three characters – four in DIRSYS's case.

Typing DIRSYS, or DIRS, at the A> prompt causes the computer to display all files tagged with the SYS attribute. These files are normally hidden to the standard system and aren't shown when DIR (or even Basic's CAT) is issued.

ERA next. To use this command you have to copy your CPM system disk. CPM Plus users use DISCKIT3. 2.2 fans use DISCCOPY (if you have two drives then use COPYDISK). Full instructions for copying disks are in the User Instructions – check them out before doing anything.

Put the copied CPM system disk in the drive and start CPM. **What you are about to do is irreversible. Make sure you are using a backup of your system disk!** Type DIR at the prompt and hit Return. You should see a display of all the files on the disk. You're going to get rid of some of them. ERA does the job: it

DIR

Catalogues a disk. All filenames are displayed except those marked with a SYS attribute.

DIRSYS*

Displays filenames with SYS attribute.

ERA+

Erases a given file or sequence of files from disk.

REN-

Allows you to change the name of a file.

TYPE

Renders the contents of an Ascii file on your screen.

USER

Changes the active user area.

* CPM Plus only.

+ CPM Plus version is ERASE

- CPM Plus version is RENAME

Line-editing control characters

Anything entered after the A> prompt is known as a command line. Using Control-plus-key sequences it is possible to perform time-saving edits on the information entered after the prompt. For instance, the cursor can be moved left or right through the line, characters to the left of the cur-

sor can be deleted, the previous command can be recalled and so on. CPM Plus naturally has many more of these short-cuts. These sequences are guaranteed to be on every version of 2.2 or Plus on any micro; keys other than the QWERTY standard are not.

Here is what's available:

Key sequence	Effect
Control-A*	Moves the cursor one position to the left.
Control-B*	Places cursor at the beginning of the line without effecting the contents of the line. Cursor is moved to the end of the line if it was originally at the beginning.
Control-C	Special one this. It is used to log-on new disks. Particularly important in CPM 2.2. If this operation isn't carried out once a new disk has been inserted, 2.2 can get very confused. Also used for breaking out of programs or transient commands.
Control-E	Forces a carriage return, but does not inform CPM. Sneaky.
Control-F*	Moves the cursor one character to the right.
Control-G*	Deletes the character under the cursor.
Control-H	Erases a character and moves the cursor left by one position.
Control-I	Places the cursor at the next tab stop.
Control-J	Has the same effect as Return (Enter) or Control-M.
Control-K*	Deletes to the end of the line from the cursor.
Control-M	Return.
Control-R	Places a hash at the current cursor location, moves the cursor to the next line and redispays any text typed in so far.
Control-U	Discards all characters in the command line, places a hash at the current cursor position and moves the cursor to the next line.
Control-W*	Recalls the previously entered command.
Control-X	Discards all characters to the left of the cursor and moves the cursor to the beginning of the line.

* Not available for CPM 2.2 line-editing, although other software may use the key sequences described here.

erases files. Be warned: once files have been erased you can't get them back. CPM 2.2 users enter ERA AMSDOS.COM and press Return. CPM Plus users enter ERA SAVE.COM and press Return.

Now type DIR, and you find that the files have gone – for good!

Well, that's more than enough drama for one month. Drop in next issue when you'll find out how to erase lots of files in one go. And also how to change file names. Can you wait?

HOT TIPS

Tips, get your tips here

ROM not on

Recently I bought A DDI-1 disk drive for my 464. Within minutes of plugging it in to my Rombo romboard I found that when I typed CAT or some similar command the disk drive catalogue was corrupted. I tried cleaning the connectors - no luck. It got to the stage where the computer crashed if I tried to access an Amsdos format disk (I also have Rodos, which performed perfectly).

Eventually I had the idea that the signals from the disk

ROM were somehow being corrupted by the rather old Rombo. So I carefully opened the disk interface and removed the disk ROM (marked AMSTRAD 40015) and refitted it into socket number seven in my Rombo. After reconnection the problem ceased. What bliss!

Matt Cawley, Deeside

Yes, it could have been caused by the Rombo, but a more likely explanation is that the DDI-1 Rom slot was either underpowered or had a dry solder joint somewhere.

Pot pourri

Some tips for the *Micro Music Creator* (reviewed in this very issue - we don't hang about here on AA!). To turn the 'music repeat' on or off, the manual quotes two rather obscure pokes. Contained within the ROM version are two RSX's that do the same job - these are |REPON and |REPOFF.

Do you want your GAC adventure to look like an Infocom one? It's quite simple - use embedded control codes. First, switch off graphics. At the beginning of the adventure, in the description of the first room, insert the following characters: CTRL-D, 2, (SPACE). You can use simi-

lar techniques for messages. Suppose you wanted to highlight a message. Put CTRL-X, your message and finally another CTRL-X. Try exploring the codes described in your manual for the various effects possible. (464 Ch9 P2, 664 + 6128 Ch7 P3).

When editing a program using the cursor keys, pressing CTRL as well moves the cursor to the very edge of the line in that direction.

James Pinto, Hook

Errors - what errors?

In AA36, Type-Ins printed my variable list. Soon afterwards I got a letter from someone who typed the proggy in to be confronted with **Type Mismatch**. He'd typed **od** instead of **0d**. I sent him instructions to check for **0s** and **os** in the data, which others may find useful when typing machine code data.

1 Enter **SYMBOL AFTER 79**. If the machine says **Improper argument**, cry, because you'll have to do it by hand.

- 2 Type **SYMBOL 79,170,85,170,85,170,85,170,85:SYMBOL 111,170,85,170,85,170,85,170,85**
- 3 List the data. Any **0s** or **os** will be replaced by a graphic symbol of dots.
- 4 Alter the mistakes and type **SYMBOL AFTER 240**
Alternatively, before typing data type the following:
KEY 141,"Error":KEY DEF 34,1,141,141
Any **os** entered accidentally will be printed as **Error**.

Byte oversight

Thank you for publishing my tip in AA36, titled 'The great bank heist'.

Unfortunately there was one small error at the top of the second column. The four bytes to be typed into **&8000** should be
00,80,8C,C0
and not
0,80,0C,C0.

CL Naylor, Penparc

Replacing Honeyview

The 32K ROM in the Amstrad RS232 interface occupies four ROM slots (that's what I call bad design). Many people find the *Honeyview* Viewdata emulator rather limited, and turn to the *Cage Comms ROM* instead. If you want to keep on using *Honeyterm* for scrolling services, you have to keep this 32K device plugged in, gobbling up four slots, because it won't fit into a conventional ROM board...

Well, for a start you can if you own a Rombo device, because pin 27 on that is connected to Vcc. This always selects the upper part of the ROM anyway, i.e. *Honeyterm*.

Problems arise when using a ROM board which leaves pin 27 unconnected to any voltage, such as the Britannia Super ROM plus. What you do is to get a 28 pin IC socket. Solder pin 27 to pin 28, using as little solder as possible. Make sure the connection is right up next to the plastic body. Now plug that into a ROM socket, and stick the Commstar ROM into the doctored socket. Use all the usual anti-static precautions while doing this.

When you switch the computer back on, the ROM will log on as *Commstar ROM 2*, and you can call up *Honeyterm* by typing **|HT**.

Mike Brown, Liverpool

KEY DEF 34,1,111,79

The above will return to printing **os**.

M Gledhill, Tavistock

ACTION TEST

And to review them - heeere's Gary!

We kick off with the CPC version of the second in the *Star Wars* series - and some bad news for Domark.

Raves this month include *The Train* and *Vindicator*. But

what about Mastergame? There isn't one, that's what!

There are some neat compilations out (p. 49) and some genuine turkeys - but perhaps we should leave you to find them...

THE EMPIRE STRIKES BACK

Domark • £9.95 cass, £14.95 disk
joystick/keys

Long ago, in the early years of the second age... (that doesn't sound right) ah yes... Long, long ago in a galaxy far, far away (that's better) there was a movie called *Star Wars* (OK, it was Earth 1977). The film did megabucks at the box office and subsequently, inevitably, there was a sequel, *The Empire Strikes Back*. Arcade games appeared of both films and furthermore *Star Wars* came out for the CPC, but not in that great a version. Now *The Empire Strikes Back* has arrived. Have they done a better job this time?

Most of the screen is taken up with a view through your cockpit and the rest is a status area. The evil forces of the Empire are viewed in 3D vector graphics as they attack. The status area has the number of shields, score, wave number and the number of enemies to shoot. You have five shields to begin with and death results when they disappear.

The sequence of events loosely follows the plot of the early part of the film. There are four stages: probots, imperial walkers, tie fighter attack and the asteroid belt. In the probot stage you have to stop a message reaching Darth Vader which informs him of the rebel

bases location. To do this you have to blast the messages as they leave the probot, and destroy incoming fire and the probots themselves. Eventually the message does get through and it's time to blast the walkers. There are two sorts of walker: AT-ST's and AT-AT's. AT-ST's are small bipedal attack craft that are easy to destroy. AT-AT's are much bigger and more tricky, but you can fly through their legs for bonus points.

Stage three is a blast-the-tie-fighter sequence similar to the Death Star approach in *Star Wars* and the asteroid

SECOND OPINION

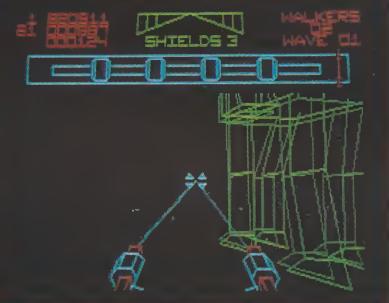

"Here we go again, saving the universe by taking on some rather basic bad guys, who look like they come from an etch-a-sketch factory.

The problems with Empire are that it has poor design, not enough stages, is too easy and occasionally crashes. Save your energy for a more intellectual pastime. Like fly swatting." PbM

GREEN SCREEN VIEW: OK

belt is a matter of dodging out of the way of the big rocks that hurtle towards you. If you complete a specific task in each stage you're awarded a JEDI letter and if you collect all four you become temporarily invulnerable to enemy fire.

There are three difficulty levels and a rebel instruction manual, which just gives you a bit of information on the enemy that you're about to face. The vector graphics move a little slowly and there's some flicker. Colour is not used very well either, there being only a handful on screen at any one time. Fast vector graphics are essential in a game of this type and unfortunately they're absent. A good tune plays throughout the game, but sound is simple and ineffective.

• An AT-AT just inviting you fly through its legs

A couple of years ago this would have been a good game, but it looks dated badly. It's an improvement on *Star Wars*, but the lack of speed lets it down considerably, because fast reactions is what the *Star Wars* games are all about. What will they do with *Return of the Jedi*? GBH

FIRST DAY TARGET

Complete wave four

The Verdict

GRAPHICS 47%

- Vector graphics are a little slow.
- Some flicker too.

SONICS 58%

- Very good continuous tune.

GRAB FACTOR 55%

- Easy level to get you going.
- Little variation from stage to stage: just the enemies change.

STAYING POWER 48%

- Three difficulty levels.
- Too easy, even on hard.

AA RATING 51%

- You'll get more fun hiring the video.

GAME OVER II

Dinamic • £8.95 cass, £12.95 disk
• joystick/keys

Game Over was favourably reviewed in AA25, and now (with similarly subtle artwork – why is the software industry so sexist?) here comes the sequel. As a bonus – and a substantial one at that – you get Game Over free.

At the end of Game Over, devotees may recall, the hero Arkos had defeated the evil Gremla and there were wild parties everywhere that lasted as late as, ooh, half past seven. Unfortunately in the

• Approaching Phantis

general merry-making the hero was forgotten about and when no-one was looking he was captured by Gremla's heirs. Poor old Arkos was shipped off to the terrible prison planet of Phantis and shoved into a deep, dark dungeon to rot. Letting the hero die is not really on, however, and a rescue mission is launched by yet another hero (go on, guess).

There are two different parts to the game, loaded separately, and a

password – which you get by completing part one – is required to enter part two. Part one is divided into four phases: approach, volcanic, underground and swamps.

Bonus lives are awarded every 25,000 points and you're gonna need them to

• Low-flying magma

get far. In the approach to Phantis you encounter the suicidal hordes who fly and shoot at you, and they're definitely not aiming to miss. Asteroids are just as deadly, but like the enemy ships they can be blasted with some well aimed laser bolts.

After flying along for a while you reach the area of volcanic activity in which balls of magma, bombers and missiles endeavour to destroy you and then reach the underground cavern and its snaky occupants. Three shots in the head are needed to brain the serpents. Phase four is just after landing in the swamp infested landscape. After capturing Adrec you can ride around stabbing at bad guys with your photonic blade and eventually you get the password to the second half of Game Over.

Now you have six levels to pass through before reaching the prison cell: surface, alien base, underground forest, inner lake, magma and prison. The planets surface is very mountainous and is occupied by some not so friendly aliens

called the Pelotrones. They die with the aid of your own rebel Pelotrone. Once you're inside the alien base you have to take control of the Ionic turbo laser and its proton loader to arm you to full power. Hidden in the underground forest is a

• Riding on your Adrec

medallion which you need to open the Blue door that leads into the inner lake. Piranhas and dinosaurs lurk beneath the hot waters and care has to be taken as you head towards the heliport.

Once inside the helicopter you have to fly through a hazardous cavern filled with molten rock and you finally reach the prison level.

Some little devils are guarding the prison and once they've been dispatched your mission's over.

SECOND OPINION

"Some really nifty graphics on this one, really mean for the CPC. The gameplay is pretty frantic at first: you'll need a good joystick. Far too easy though. More! More!"

Pbm

GREEN SCREEN VIEW:
Bad choice of colours makes things tricky to see

A pleasant little tune (if a bit tinny) plays on the title screen, but there isn't one during the game itself. Sound effects are alright, though they too are a bit on the tinny side. Horizontal scrolling is fine and there's plenty of colour, although a large portion of it is blue. Green screen players, may have occasional problems seeing things.

Game Over was fun shoot-em-up, and this is a good game too. Getting the original and a sequel makes it good value for money if you haven't already got Game Over, and it's not so bad on its own anyway. My only doubt is the difficulty factor: your first few games will be short lived, but it doesn't take long to get to the end of the first part of the game. Worth a look, without a doubt.

GBH

FIRST DAY TARGET:
Complete part one

The Verdict

GRAPHICS 65%

- Smooth horizontal scrolling.
- A bit too blue.

SONICS 56%

- Reasonable title tune.
- Tinny effects.

GRAB FACTOR 69%

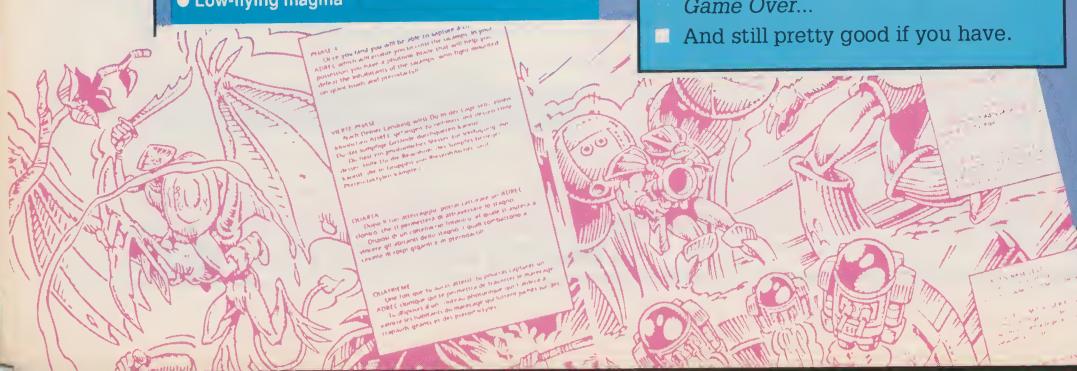

- Too difficult at first.
- Free copy of Game Over on the flip side.

STAYING POWER 63%

- Two parts to each of two games.
- Not that difficult to complete with practice.

AA RATING 69%

- Great value if you haven't got Game Over...
- And still pretty good if you have.

VINDICATOR

Imagine • £8.95 cass, £14.95 disk
• joystick/keys

A poor defenceless insignificant little planet, known as Earth (what a dull name!) is yet again under attack from hostile alien forces. You, the Vindicator, stand between alien domination and victory for the Earth. You've managed to infiltrate the alien fortress and now all you have to do is to find the hidden bomb components and blow the aliens into little pieces.

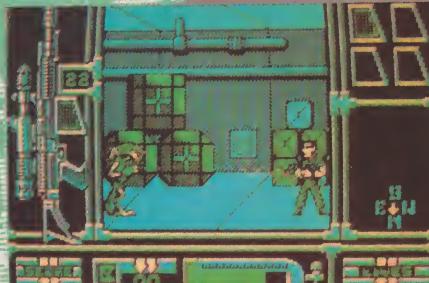

• A stupid alien...

In the centre of the screen is the playing area with various other bits around it. An oxy-gum indicator, your lives and score are at the bottom of the screen. On the left is a gun symbol with a figure to show how much ammunition is in it and to the right are your magazines, a display of objects carried and compass direction.

The bomb components are hidden within the four level complex, each level being a maze of passageways. Doors lead into rooms which contain computers, ammunition, lift passes, oxy-gum or computer passes. The last four are generally guarded by aliens who come in two flavours: stupid and mean. (All resemblance to AA staff living or comatose is purely intentional - ed.)

To access a computer you need a computer pass. An anagram is displayed and you have to solve it in order to get hold of

• And a mean one

the map showing your position and the location of a bomb bit. Lift passes are needed to move between floors and oxy-gum is essential to stop the toxic atmos-

sphere killing you. Oxy-gum keeps you alive for a limited time and when it starts to run out you need to find more.

Stupid aliens always shoot at the same height, so duck and they miss: but the mean ones fire directly at you no matter where you stand. When they die they drop any equipment that was on them and you can pick it up. Mean aliens take more shots to kill and the different magazines that can be loaded into the guns come in a variety of powers. More powerful ammunition finishes off the bad guys quicker.

SECOND OPINION

"The graphics look really terrific – even if they're a little bland. In a weird way this helps create a gloomier atmosphere – as does the sound."

I liked playing this game a great deal, but I have to admit the controls got right up my nose. Why on earth didn't they have simple left/right/up/down? It's too complicated and you find it doesn't work 'naturally'.

The difficulty level is just right, and I'll be playing this for a good few evenings to come."

PBM

GREEN SCREEN VIEW:

There's lots of green on the colour version, so no problem

After escaping from the maze and getting all the parts of the bomb you go for a fly and take on the mechanised legions of aliens. More aliens await your destructive powers in a jeep race across the land and finally you enter the catacombs where the Giant Guardian must be defeated. Passwords allow you to go to the later stages of the game, avoiding the tedium of having to complete stage one all over again.

An atmospheric tune plays on the title screen and throughout the game, and another plays briefly before the action starts. Sound effects are adequate. Sprites are large and well animated with colour used reasonably well, though it would have been better if there were more.

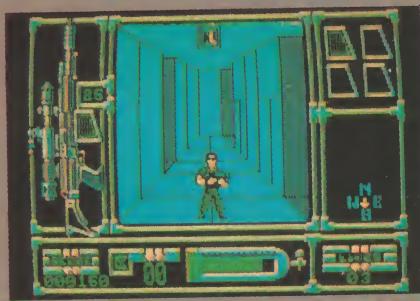

Though it's not the most sophisticated

• The computer room

program ever it does at least have some variety. The anagrams may not be difficult to solve (MALEK MIB=MIKE LAMB), but it gives you something to think about for a while instead of just blasting everything. It gets confusing when you push the joystick up because you turn through 180° and if you don't keep an eye on the compass you're soon lost and very disorientated. Apart from that it's a pretty good game with plenty of action to keep you playing for weeks.

GBH

FIRST DAY TARGET:
Complete stage 1

• Wandering down a corridor trying not to get lost

The Verdict**GRAPHICS 82%**

- Large, well animated sprites.
- A little too green for my taste.

SONICS 36%

- Excellent tune plays throughout the game.

GRAB FACTOR 77%

- Puzzles to solve as well as some not very mindless blasting.
- Initially very confusing with the 180° rotation.

STAYING POWER 83%

- Three stages to complete, with the action varying in each one.
- First stage in the maze is disorientating and tricky to complete.

AA RATING 74%

- A good mix of puzzles and action make a good game.

GOLD, SILVER, BRONZE

Epyx • £14.95 (3 cass), £24.99 (3 disk)
• joystick/keys

Winter Games was first reviewed way back in AA9 and won a Rave. Now it has returned in a bumper sporting bundle complete with *Summer Games* and *Summer Games II* – neither of which has previously appeared on CPC.

All three come on separate disks/tapes and the events are loaded individually. There are 23 events, eight in each of *Summer Games* and *Summer Games II*, and seven in *Winter Games*.

With each of the three games you have a menu of options that consist of: Compete in all events, Compete in one event, Practice, See world records, Controls and Opening ceremonies. The opening ceremonies are pointless but a nice touch nonetheless and the controls

SECOND OPINION

"Winter Games was one of my favourite waggling compendiums, and I'm pleased to see it again. *Summer Games* also comes up to the same high standard in its graphics and game-play, though the sound isn't quite in the same class. *Summer Games II* is the runt of the litter, and appears rushed, with some very poor graphics and dull content."

I suppose at the price it's reasonable value, but I doubt many will be attracted to the idea of committing themselves so heavily to one theme. If you get this little heap home and find you don't like what you see you're in trouble!

The fact is, however, that most people who do buy Gold, Silver, Bronze will feel happy with their purchase." PbM

GREEN SCREEN VIEW:
A winner

• The Bobsled in *Winter Games*

• Equestrian from *Summer Games II*

• Landing on your head in *Summer Games*

option allows you to redefine the keys. It's best to use practice first to get you used to each of the events and then go for play one event. When you think you're ready you can go for the whole thing and play all events. If you do well enough then you get into the world records.

Up to four people can play and before you start you have to enter your name and choose a country. *Summer Games* consists of the pole vault, diving, 4X400m relay, 100m dash, gymnastics, freestyle relay, 100m freestyle and skeet shooting; *Summer Games II* has the triple jump, rowing, kayaking, javelin, high jump, fencing, cycling and equestrian; and *Winter Games* has figure skating, free skating, speed skating, hot dog aerials (ski stunts), ski jump, biathlon and bob sled. All that lot should be enough to exercise the most chair-happy of athletes!

Few of the events are wobble games and different approaches are needed to complete each. Many rely on you getting into the rhythm and moving the joystick in a particular pattern, whether left/right, up/down or even in a circular motion. Other events require fast reactions – such as the skeet shoot, for example, in which you have to hit clay pigeons (I didn't know pigeons were round and flat!).

Winter Games has the best graphics by far, but the graphics in the other two games are still pretty good. Some of the animation is a bit flickery and the graphics are a little small in the the two *Summer Games*, but there are no such problems with *Winter Games*. The national anthems of the country you represent are played well and there's also a good tune on the opening ceremony. Sound effects are terrific too.

Because of the vast price difference there should really be two ratings for this game, one on tape and the other on disk.

£25 for a CPC disk game is a lot of money – it's more expensive than most 16 bit software. There are three disks, but that's not enough of an excuse. The problem with multi-load games of this type, though, is that a disk version is almost essential – unless you don't mind spending more time loading than playing the game.

Lots of events, plenty of variation and loads of money. GBH

FIRST DAY TARGET:
Get into the world records list for all events in one game

The Verdict

GRAPHICS 68%

- Winter Games still has excellent graphics, even after two years.
- Other graphics are not up to the same standard.

SONICS 56%

- Some excellent tunes in all three games.

GRAB FACTOR 64%

- Competing against other players adds to the enjoyment
- Boring with only one player.

STAYING POWER 71%

- Loads of different events to play.
- Irritating pauses when waiting to load from tape.

AA RATING 66%

- Multi-load on cassette and high price on disk are severe disadvantages.

ROAD BLASTERS

US Gold • £9.99 cass, £14.99 disk
• joystick/keys

Yet another arcade coin-op game has been transferred to the humble home micro by US Gold. The setting is the distant future where rally-type races are all the rage. There is a deadly difference between these rallies and the twentieth century variety, in that your car is armed and you are free to blast your opponents off the road. (*M25 commuters sign here.*)

Your car sits on the roadway – which comes out of the screen towards you –

● Approaching a checkpoint

and there's a panel at the bottom with vital information on speed, fuel and, of course, your score. The fuel gauge is divided into main and reserve, the main tank being used until it runs out, at which point the reserve tank is switched in. Run out of fuel and you lose a life and when all lives are gone it's game over.

Your objective is to pass through all the checkpoints of the stage and continue onto the next one. In all there are 50 stages to go through and the hazards on each, as you'd expect, get progressively more frequent and deadly.

As you go for your casual 180 mph Sunday afternoon drive through the countryside you encounter other vehicles out passing time. They come in four varieties: **stingers**, **command cars**, **rat jeeps** and **cycles**. Ask them politely to get out of your way: pull your trigger and watch them go up in a ball of flame. Take care you don't collide with them though, because if you do you'll join in the flaming fun too. There are also some static hazards on the roads – mines, gun turrets, spikers and toxic spills.

● The support jet brings in an extra weapon for you

The Opposition

Stingers: lightly armoured cars despatched easily with a burst of machine gun fire. Worth 50 points.

Command Cars: heavily armoured, almost tank-like vehicles that need a cruise missile to destroy them. 100 points is your reward for their destruction.

Rat Jeeps: fast moving and evasive little guys. 50 points.

Cycles: the fastest moving and most evasive of your opponents. Because they're so difficult to hit they're 100 points worth.

Mines: to be avoided, otherwise you go boom.

Gun Turrets: fire as you approach. Only takes one hit to destroy the car. Can be blasted off the edge of the road.

Spikers: as deadly as mines and they're thrown off your opponents' vehicles while they're in front of you.

Toxic spills: to be avoided whenever possible.

COMPUTER VERSION OF THE DEA SELLING ARCADE GAME
AMSTRAD SCHNEIDER CPC
"VROOM! BOOM! C.R.O.M."

● Armoured cars are tricky to destroy

Not everything on the road is quite so deadly: you come across fuel occasionally – vital if you hope to reach the end of the stage. Help in another form is provided by a support jet that flies over at times and drops weapons onto you. If you catch them you stand a better chance of dealing with your opponents. The weapons are: **cruise missiles**, **nitro injectors**, **cannons** and **shields**. Crash and you lose any extra weaponry.

SECOND OPINION

"It's a racing shoot-em-up, really, and that's all there is to it. Like them and you'll like it, though I tend to think it does nothing Overlander didn't do better. If what you're after is good, old-fashioned mindless mayhem at a fair old lick, then Road Blasters should keep you in joystick cramp for quite a while, though when you're away from it you don't find yourself playing it in your mind all that much. And perhaps that's what makes a really good game – when it won't let you alone." SC

GREEN SCREEN VIEW: Fine in green

As you reach each checkpoint and the end of a stage your fuel tank is filled up. Extra fuel is added to the reserve tank at the end of a stage and bonus points are also awarded. Then it's time to go onto the next stage of the rally.

Sound is fine – there aren't any tunes but the effects are good enough. For some reason part of the sound disappears at times and then comes back later, but other than that there are no problems. Graphically it's not exceptional, but at least the road moves better than in US Gold's previous attempt at a car racing game, *Outrun*. The horizon scrolls smoothly as the car turns and there's little flicker in the graphics. The roadside features do seem to jump towards you a bit, but it's not that bad.

It's a cross between a racing game and a shoot-'em-up. In some ways it's very similar to *Overlander* by Elite: hostile cars and roadside hazards, a multitude of stages to go through and strap on weapons to improve your survival chances. Of the two games I'd say that this is slightly better, but it is just a bit too easy to play and it gets boring rather quicker than you'd hope. GBH

FIRST DAY TARGET: Complete ten stages

The Verdict

GRAPHICS 67%

- Colourful and fast moving roadway.
- Collision detection is a bit off.

SONICS 43%

- Good effects –
- but sometimes they vanish for a while.

GRAB FACTOR 73%

- Plenty to blast and easy enough to start with.
- Loads from tape or disk every few levels, and it gets a bit annoying for cassette users.

STAYING POWER 67%

- 50 stages to complete.
- After a while you can go for ages without losing a life.

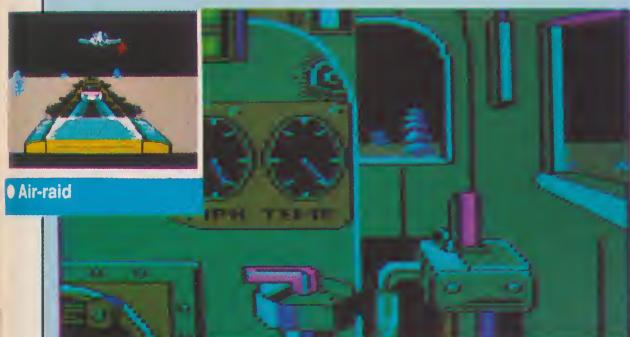

AA RATING 69%

- A good, hybrid shoot-em-up and racing game.

THE TRAIN

Accolade/Electronic Arts • £8.95 cass,
£14.95 disk • joystick/keys

First there was a tank, then came a hydrofoil. Now it's time to trundle off into the past at the footplate of a train, all courtesy of **Electronic Arts**. Their latest venture into the world of simulations is set in wartime Germany. You take the part of a resistance fighter who, along with a colleague, tries to steal a train with France's art treasures on board. ('Will the person taking the train from platform four please put it back?') The works of art are being shipped to Berlin to use as leverage in the impending German surrender.

• Steaming along in the engine

The question you, me and they want to know, though, is whether Electronic Arts make it four excellent games in as many months with their latest offering, or are they, as it were, run out of steam? Play begins at the station in Metz where you must first capture the train. You stand towards the rear of the train and give Le Duc covering fire as he tries to reach the signal box. Germans are hiding in the railway buildings and pop up occasionally to fire at you. Get your retaliation in first or the game's over. When Le Duc reaches the box you choose the **difficulty** level: easy, intermediate or expert. You then have to cover Le Duc as he returns: then it's time to depart.

The view switches to the inside of the train's cab and the simulation part of the game takes over. You have six things to operate in the cab: **throttle**, **furnace**, **brake**, **forward/reverse lever**, **steam blow off** and **whistle**. There are also three dials which indicate **steam pressure**, **engine temperature** and **speed**. When your engine is all steamed up release the brake, open up the throttle and away you go. Keeping the pressure up is essential, so periodically fill the furnace with coal: run out and you've had it. Keep an eye, too, on steam pressure, which can be released with the blow off lever - let it get out of control and the engine could blow.

To change direction you have to stop the train and move the **forward/reverse lever**. Don't flip the lever when the train's moving, though, because the gears will be destroyed and the train can only travel in the direction it was going when you switched the lever. (Signals are sent with the whistle, of which more later.)

There are four other screens which can be called up: **front gunner**, **rear gunner**, **map** and **status**. The gunner screens are used to shoot at any attacking enemy aircraft. On the map screen a small cross represents the train, blobs are stations and rectangles bridges. If a station or bridge is blue then the Germans (hiss) have control of it: pink means the resistance have it (hooray). A status screen shows the damage sustained by the boiler, brake and art and also how many of the enemy you've killed. Your **score** is calculated using these figures.

You have to reach **Riviere** before dawn and there are a myriad ways to achieve your destination. A network of railway lines covers France and there are many points at which you can change track. You need first to signal the resistance - who'll switch the points for you - with one, two or three blasts on the whistle.

As you travel towards your destination you need to stock up on coal and water, which can only be obtained at stations. Before you can refuel the station

The Verdict

GRAPHICS 68%

- Good engine room.
- Other graphics are sub-standard.

SONICS 36%

- Nice train effects.
- No tunes.

GRAB FACTOR 78%

- Combination of arcade and simulation works well.
- Air attacks are irritating.

STAYING POWER 82%

- Three levels of difficulty.
- Tricky to complete on all of them.

AA RATING 80%

- A very good game, but not quite up to recent EA standard.

• Taking it to the bridge

must be captured. The sequence is very similar to the start-up phase and more Germans stand in the buildings. If you capture the station you gain some intelligence information, often being a warning that parts of the railway network have been destroyed. A message can also be sent to the resistance to tell them to capture a bridge or station, or arrange for repairs to the train. You don't have to stop in a station: you can just go straight through.

Bridges are a much more dangerous proposition altogether. If the bridge is held by the resistance there are no problems, but German controlled ones are guarded by boats. Trying to go straight across a bridge is fatal, since the boats easily pick you off. To cross a bridge you must first stop at the bridge and then blast the boats out of the water. Once they've all been sunk you can safely cross. Too many hits on the train and it's game over.

Sound is fairly simple but good - just machine gun effects and several different train noises. The graphics of the cab are good, but the rest are more functional than anything else.

I had high hopes for *The Train* on Electronic Arts' recent record, but... It's still a good game, but it lacks that certain something to make it a truly excellent game. The mixture of arcade elements and simulation works OK, but you do tire of the regular air attacks.

GBH

FIRST DAY TARGET:
Reach Riviere on easy level

SECOND OPINION

"EA's simulators haven't been too realistic, at least as far as the CPC goes. The Train follows a groove that's getting too worn, a simulator with action sequences. If the latter were of high standard I wouldn't complain, but quite frankly they're not worth the memory expended on them. Let's hope EA's future releases display a bit more imagination and gameplay."

PBM

GREEN SCREEN VIEW
Station sequence is trickier,
but otherwise OK.

BY FAIR MEANS OR FOUL

Superior Software • £9.95 cass, £14.95 disk
• joystick/keys

The latest in a long line of boxing simulations has a twist that makes it different from all previous attempts: you can cheat! You don't have to, of course, but your opponents certainly will, and your chances of winning improve too.

In the centre of the screen is a boxing ring occupied by you, your opponent and the referee. Below it are two bars representing how many hits each fighter has taken and there's a clock that counts down to the end of the round. Above the ring is a board with the round number on and on either side of that is a score and a small figure. The figures have a number in the centre which tells you how many 'chances' you have left. Each player has five 'chances' which decrease every time you lose a round or get caught fouling your opponent.

The fight is split into fifteen rounds and to win you must have more points than your opponent at the end of the fight or reduce his 'chances' to zero. At the start of the round both damage bars are green and every blow taken by a fighter increases the amount of red in the bar. If the bar is completely red the fighter is knocked down and loses a 'chance'. The player with most red in his bar at the end of a round loses a chance. If both are

● Out for the count

A scroll down memory lane...

Boxing has long been a favourite subject for the simulation treatment, and *BFMOP* is only the latest in a series of attempts - some good, others not so - to get us punchdrunk. Remember these?

- *Frank Bruno's Boxing* (Elite). Opponents from around the world getting tougher to beat. Not the best, but fun to play - if the thought of mixing it with stupid stereotypes (an African with a bone in his nose?) doesn't bother you.
- *Rocco* (Gremlin, AA2, 36%). Also viewed from the rear. Unfortunately the opponents differ little.
- *3D Boxing* (Amsoft, AA3, 66%). Fighters are viewed from the ringside rather than behind, and it was the first one to have a two player option.
- *Barry McGuigan's Boxing* (Activision, Rave in AA5). Combat and a strategy part in training. Features two player option and is enjoyable still, especially if you want to think a bit as well as fight.

equal, then no-one loses anything.

Now to the important bit - cheating! The two

figures at the top of the screen can be one of three colours: **green**, **amber** and **red**. **Red** means that the referee has his beady little eye on you, **amber** means there's a chance of getting away with a foul and **green** means you can kick, butt and knee to your heart's content. Illegal moves are more damaging (and fun) than legal ones and so help you to victory. Once Mild Martin the junior champion has been defeated you go onto Steady Eddie the County Champion and work up to Deadly Dan the World Championship man. Each opponent gets progressively

● You can't win 'em all

tougher and more determined to win by foul means.

As with all combat games you have a wide variety of moves available to you, eight with fire pressed and eight without. Switching from legal to illegal and vice versa is a simple matter and you can also block punches when and if you feel like it.

All you get for sound effects are cheering crowds and the thud of glove on flesh, but that's really all you need. The boxer graphics are large, colourful and well animated, and *BFMOP* has a refreshing line in humorous graphics. Even the shadowy crowd looks good as they leap up and down in their seats at the end of a round. Colour is used well throughout.

First thoughts are 'Oh no, not another lousy boxing game', but fortunately it's much more than that. It's fun to play, the opponents are tough enough to keep you interested and, best of all, you can use unfair tactics to win a fight. Not the greatest game ever, but certainly the best boxing game.

GBH

SECOND OPINION

"As a boxing fan I have to look severely on this travesty of the noble art. How dare they allow kicking and illegal punching?"

Right, now I've got that out of my system: *BFMOP* is brilliant! It's amusing, enthralling and the range of difficulty is wide enough to keep beginners and old hands equally entertained. It ain't cricket, as Frank Bruno memorably put it - but it sure is fun!" SC

GREEN SCREEN VIEW:
Knock out

● Punch good: kick better

● Punch good: kick better

The Verdict

GRAPHICS 76%

- Large and well animated boxers.
- Good use of colour.

SONICS 35%

- Thud and cheer.

GRAB FACTOR 69%

- Fouling adds greatly to the excitement.
- One or two player game.

STAYING POWER 80%

- Six different opponents to beat
- As in real life, once you're World Champion the only way is down.

AA RATING 83%

- Superior have been quiet for a long time, but they're back with a bang. Know what I mean, 'Arry?

COMPILATION ROUND UP

A matter of course

LEADERBOARD PAR 3

US Gold • £14.99 cass, £19.99 disk
• joystick/keys

Take one box, put in two tapes or disks, maps of the courses, a pad of score cards and what do you get? Probably enough computer golf to keep you going for months.

Leaderboard was a Rave AA21, and some supplementary courses were provided for it in *Tournament Leaderboard*. *World Class Leaderboard* arrived in AA26 and also got Raved about.

All together there are twelve different courses to play, four to each game. The graphics are very good for a golfing game/simulation.

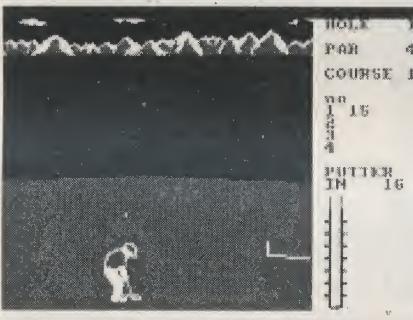

It's well presented and not just bundled together hastily for a quick buck. But then again it is expensive. You do

however get some extras in the scorecards and maps. Computer golfers will find plenty to do with this, but if you're not an avid player then you might find the compilation just a little too narrow in scope.

GBH

GREEN SCREEN VIEW:
Grass is green anyway

AA RATING 70%

● A hole in 15 – Nick Faldo watch out!

Summer – what summer?

SUMMERTIME SPECIALS

US Gold • £12.99 cass
• joystick/keys

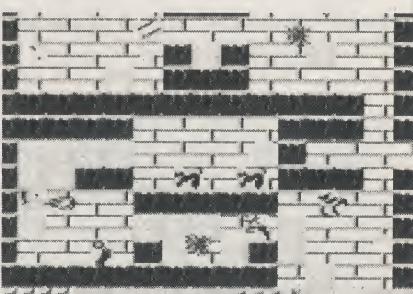

Six of US Gold's releases of the past year have been bundled together into a compilation: *Solomon's Key*, *Bravestarr*, *Captain America*, *Trantor*, *World Class Leaderboard* and *Rygar*.

Solomon's Key is a simple but fun platform game that scored 78% in AA26. *Bravestarr* is based on the cartoon series of the same name and is probably one of the easiest games ever to complete. It received 39% in AA33. *Captain America* was never reviewed, but had it been the rating would have been in the region of 53%. *Trantor* is a shoot-em-up with some huge and well animated sprites that earned it a Rave review in AA27. *World Class Leaderboard* is a golfing simulation reviewed in AA26. It's the second and last Rave game on the compilation. Bringing up the rear is *Rygar*, a poor coin-op conversion that scraped 56% in AA29.

This is a sort of which-do-you-want-the-good-news-or-the-bad-news compilation, with some outstanding and some decidedly average games. Still, six for the price of one is excellent value for money, and with compilations that's often the deciding factor.

GBH

GREEN SCREEN VIEW:
No problems

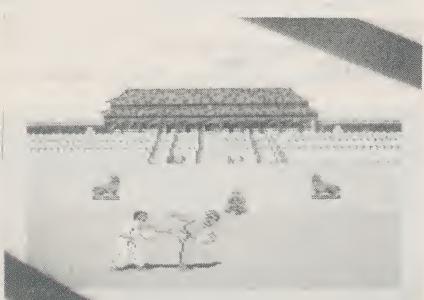

● Solomon's key, a good ol' fashioned platform game

The seven samurai, karate, kung fu...

KARATE ACE

Star Games • £12.99 cass, £14.99 disk
• joystick/keys

Combat games have been around for a long time now and martial arts are probably the most popular. The seven are: *The Way of the Exploding Fist*, *Bruce Lee*, *Kung Fu Master*, *Way of the Tiger*, *Avenger*, *Samurai Trilogy* and

● A piece of history: *Exploding Fist*, the first ever *Mastergame*

Uchi Mata.

The Way of the Exploding Fist was the *Mastergame* in the first issue of AA. It's a traditional kick-em-up for one or two players, and is still good even today. *Bruce Lee* was Raved about in the following issue and was more of an arcade game than a combat game. AA11 saw the arrival of *Kung Fu Master*, which notched up a respectable 72%. *Way of the Tiger* got 70% in issue 8 and the sequel, *Avenger*, got Raved about eight months later. *Samurai Trilogy* got the worst rating of all at 47% in AA24 and the compilation rounds off with 65% for *Uchi Mata*, reviewed in AA20.

If you're a fanatical combat gamer you'll find this compilation unbeatable, but seven combat games may be just too much for people with a more delicate stomach.

GBH

GREEN SCREEN VIEW:
Kick-em-in green

AA RATING 73%

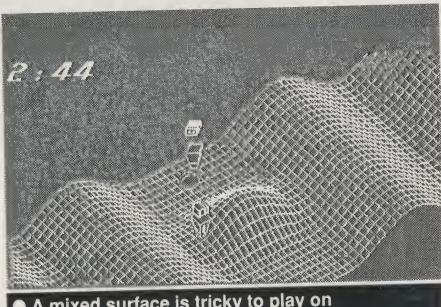

AA RATING 69%

VECTORBALL

Mastertronic • £2.99 cass
• joystick/keys

A futuristic ball game, Vectorball is played between two robotic players over an irregular pitch. The idea is to score as many goals as you can and concede as few as possible within a time limit. Five matches are played, and you can play another person or the computer.

The playing area is viewed from slightly above and at an angle. It scrolls as the ball moves around to show the goals and the robotic players. A click ticks away the seconds on screen too.

• A mixed surface is tricky to play on

You move your robot around trying to catch the ball. If you're moving when you catch it then you carry on because of the momentum: otherwise you have to stand

SECOND OPINION

"The bizarre joystick controls on this drove me absolutely potty. Getting going is just so frustrating that I suspect many players, like me, won't have the patience. And why should they?" SC

GREEN SCREEN VIEW:
Mainly mono anyway

still. Once you have the ball you can shoot in any direction. Shot power is increased by extending your neck.

There are four different pitches to play on: hills, ditches, waves and mixed. With hills you have a generally flat pitch with some hills (more hills on higher skill levels). Ditches are the opposite of hills and waves are troughs that run both along and across the pitch. With mixed you have a jumble of all three types to give a very strange playing area indeed.

Colour's not used brilliantly, since most of the screen is black with white lines. Scrolling of the pitch is fast and the two robots zoom around. There's some flicker, but not enough to ruin the game. On the title screen there's a good tune, but effects in the game are simplistic.

You don't get a completely stupid computer opponent and so you'll play a good few games before you start beating it on a regular basis. The most irritating thing about it is waiting to play between games

The Verdict

GRAPHICS 63%

- Fast scrolling and well designed pitches.
- Lacking in colour.

SONICS 52%

- Tune on title screen.
- Few effects.

GRAB FACTOR 66%

- Intriguing game design.
- Confusing controls detract from the game.

STAYING POWER 55%

- Tough computer opponent.
- Will tire of it rapidly.

AA RATING 62%

- It's good, but not that good.

because there's a very long pause. Control is confusing as you switch from directional when you run around the pitch to rotational when the ball is in your possession. One or the other is fine, but not both. Not bad for a budget game, but that's all it could be. GBH

FIRST DAY TARGET:
Beat the computer

THING

Players • £1.99 cass
• joystick/keys

Planet Rombus has small spherical occupants composed of squashy insides and a hard silica shell. Their political advisor, the Ball, is off to see the Dingalinger Overlord. Thing is an intergalactic postie who's assigned to deliver the Ball, but the Ball is in a playful mood and refuses to go until Thing (you) has solved ten simple tasks. (*Whaddya means sounds silly?*)

You've a list of objects carried, commands, the day and a third of the screen with a horizontally scrolling playing area in which you stand. Ball floats just behind

The Verdict

GRAPHICS 56%

- Smooth scrolling graphics.
- Good use of menus and windows.

SONICS 57%

- Walking, and a better than average title screen tune.

GRAB FACTOR 47%

- Silly scenario.
- The most tedious game for ages.

STAYING POWER 29%

- Ten tasks to solve.
- See Grab Factor.

AA RATING 44%

- Worth a budget price – if only just.

SECOND OPINION

"For anyone above the age of, what, ten, it's dreary and dull – why have someone walking so slowly? – but perhaps for anyone younger than that who's easily amused it could be a hit. Just don't make me play it." SC

GREEN SCREEN VIEW:
Green

a different zone to the game. Objects are littered around the zones floating in canisters, and may be taken from them and carried to other locations to help you solve the ten tasks. Objects can also be examined and you can abort or pause the game. A status panel can be called up to let you know how things are going.

Little colour is used and the scrolling is smooth, but slow. The sprites of Thing, Ball and enemies are nice. Sound is footsteps and shots and a title screen tune.

At first it looks a cute game with nice sprites and some problem solving to do. After a few (very few) minutes however you get bored: all you do walk around (incredibly slowly) and try to find something to do. Unless you have the patience of a saint, look elsewhere for excitement, adventure and wild things. GBH

FIRST DAY TARGET:
Stay awake for five minutes

● Thing stands next to a phone box

1. R TELEPHONE BOOK.
2. NOTHING.
3. NOTHING.
4. NOTHING.
5. NOTHING.

1. ERASER.
2. USE.
3. ERASURE.
4. STATUS.
5. ABORT.

ZONE 01
TIME 00:00:00

METAPLEX

Addictive • £2.99 cass, £6.99 disk
• joystick/keys

Garth is a naughty two headed monster with his mind set on the destruction of your home world. He lives inside a huge metal complex in the interior of an asteroid. Having arrived inside the asteroid you now

The Verdict

GRAPHICS 57%

- Fast moving and colourful sprites.
- Lacking in detail.

SONICS 64%

- Great title tune.
- Uninspiring effects.

GRAB FACTOR 52%

- Instructions are a little confusing.
- Too easy to get your ship damaged.

STAYING POWER 63%

- Huge complex to explore.
- A game that demands to be mapped.

AA RATING 56%

- Addictive should stick to strategy games.

SECOND OPINION

"Not the most innovative game that's appeared this year, but on the other hand they're not asking £15 for it. I don't think for £3 you can expect to be excited to death, and with Metaplex you won't be."

SC

GREEN SCREEN VIEW: OK

have the simple task of killing Garth and escaping from the asteroid.

The screen is split into two sections: a flick screen play area and an information panel. Included in the information panel are number of craft, object carried, laser power, acid level, shields and a three by three grid of boxes (more of them later). If laser power is out you can't fire and when your shields are gone you need to find a new craft.

There are three skill levels. Distributed throughout the complex are small flasks, which are initially empty, but which can be filled from the acid tank. If the flask is then dropped over a power unit its corrosive properties eats into the unit and drain Garth of power. When all four units have been destroyed in this way you can hunt Garth down, shoot him and leave by the exit as fast as possible.

It sounds simple enough, but

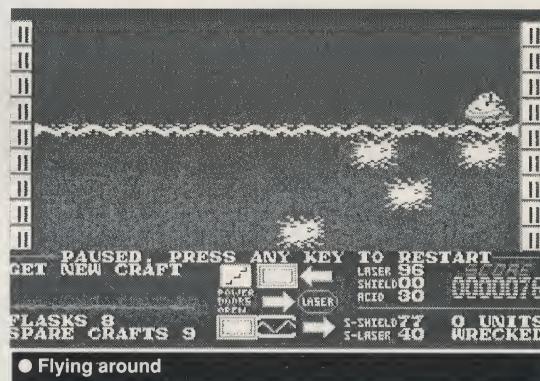

unfortunately the complex is protected by a security system. The system is twofold: it has nasty little droids who try to kill you, and there are sections of the base blocked off by electronic doors - which is where the nine boxes come in. They control doors, air flow, laser refill points, teleporters and also release droids into the complex. The condition of the boxes is altered by landing on a security panel and pressing fire.

The graphics are colourful, but lack great detail. Sound is simple, but there's a pleasant tune on the title screen and during pause.

There are plenty of things to shoot and problems to solve. In some ways it reminds me of *Dan Dare II*, but it's nowhere near as good. At £3 it's a reasonable effort. **GBH**

FIRST DAY TARGET:

Destroy two power units

GM CHESS

Camel Micros • £14.95 disk
• joystick/keys

Chess has been around for a very long time and computer chess for a few hundred years, for while the first chess computer may have been mechanical, it was still a computer at heart. Micro computer chess has been around since just after home micros arrived. There have been many attempts - some good, some indifferent and some plain bad, but there still seems to be an interest in producing more. Occasionally you do get chess games with a gimmick: speech synthesis, 3D displays and now there's one with music that plays throughout the game.

There are seven skills levels to play, ranging from easy to exceptionally difficult. Time between moves increases con-

SECOND OPINION

"I can't judge how good this one is at beating the Karpovs and Kasparovs of this world, but at my standard it's reasonably fast. At more advanced levels, however, it's hardly greased lightning."

Want to play chess and can't find a partner? This could be just the job." SC

GREEN SCREEN VIEW: You can alter colours, so no hassle

siderably on higher levels. You can choose from a wide selection of openings for the computer to start with or you can let it pick one at random. One or two people can play or the computer can play against itself.

Options to turn the music off, changes sides, change level and set up the board are included. From the main menu you can also load programs that cover rules, openings, mid game and endgame.

The tune is played throughout the game, except for when the computer is thinking. Sound effects are minimal, but it is a chess game after all. Graphically it's nothing out of the ordinary, with the board viewed from above and colours that

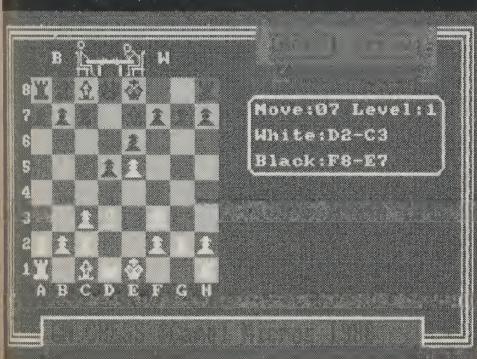

can be changed to suit your monitor.

What can you say about a chess program that hasn't been said a million times before? £15 isn't much really, but then it's not the best chess game around. That honour still goes to *Colossus Chess 40* by CDS (AA8: a whacking 92%). If you want music while you play, put on a record. **GBH**

FIRST DAY TARGET:

Beat the computer on level 3

Check it out, mate

The Verdict

GRAPHICS 47%

- Easily identifiable pieces.

SONICS 53%

- A tune in a chess program!

GRAB FACTOR 54%

- Reasonable introduction to chess.

STAYING POWER 76%

- Chess programs never die.
- On high skill levels the computer take hours to make a move.

AA RATING 63%

- Appeal limited to chess buffs.

FIRST BYTES

An assembly language series with Richard Monteiro

Welcome, assembler fans, to another feast of fun (*oh get on with it – ed.*). Ahem, by now you should have familiarised yourself with **Micro Assembler (MA)**, which was on last month's cover cassette. If you've forged ahead and tried writing your own routines you'll undoubtedly have come across many of the program's features (*quirks – ed.*). Expect a box most months detailing corrections, enhancements, patches and tips for **MA** – all contributions gratefully received. See below for this month's 'tweak'.

Now let's get on with assembly language programming.

Easy as A, B, C

All operations are performed on registers. A while back you learnt that numbers could be loaded into registers (in much the same way as values are assigned to variables). The general format is **LD X,Y** where X is a register (**A**, **B**, **C**, **D**, **E**, **H**, **L**) or register pair (**BC**, **DE**, **HL**) and Y is a number – between zero and 255 for registers and between zero and 65535 for register pairs. For instance, **LD A,27**, **LD BC,7328**, **LD E,167**.

Using a similar technique to the one detailed above, registers can be filled with values held in other registers. **LD A,B** places the contents of register B into register A; **LD H,C** fills H with whatever is in C; **LD D,D** loads D with D (useless, but possible nonetheless).

MA accepts the standard syntax of loading a register with a value. It also handles register-register loading, but without the usual comma: **ld a d**, **ld c c**, **ld h l** and so on.

Something else

You should also know that numbers can be retrieved from, and placed in, memory. Basic uses **PEEK** and **POKE**; assembler equivalents are very similar. For example, **LD A,(&8000)** loads the A register with the contents of memory location **&8000** and **LD (&8000),A** places the contents of the A register in memory location **&8000**. **MA** uses an odd syntax to simulate these commands (this will be altered soon):

ld a ,(&8000), **ld ,(&8000) a**.

Now for something new. If you want

to increment a BASIC variable by one, you might try something like **A=A+1**.

In assembler you would use **INC A**.

Next month you get the chance of writing a short assembly language program using the instructions you have learnt to date. Be prepared!

And Hacker's Only returns with a vengeance, with the 100 Z80 instructions Zilog don't want you to know about!

This increases the value held in **A** by one. Any register or register pair can be increased by one: **INC C**, **INC DE**, **INC BC**. While adding one to a register has its uses, adding large numbers to a register is generally much more useful. The instruction to do this is the appropriately-named **ADD** instruction. Only the **A** register can make use of this technique: **ADD A,20**, **ADD A,176**.

Add contents

Both the **A** and **HL** can have the contents of other registers added to them. **ADD** is opcode that makes this possible. Things like **ADD A,D**, **ADD A,L**, **ADD HL,DE** and **ADD HL,HL**. Note that the **A** register can only have 8-bit registers added to it while **HL** can only accept 16-bit registers (register pairs).

MA doesn't handle **ADD** instructions in the usual manner, so take care. If you are adding to the **A** register use the format **ADD,X** where **X** is any number between 0 and 255. All other **ADD** instructions mustn't have a comma splitting any part of the instruction. **ADD HL BC**, **ADD A B**, **ADD HL HL** are examples of how **MA** prefers things.

Tweak Micro Assembler

As you have probably found out, **MA** source code looks strange. For instance, dashes (-) are used to separate opcode from address or data and the right-pointing square bracket (]) denotes a label. Not only is this confusing to the beginner, but it's also wrong. Here are some remedies.

Change these lines to read:

```
2210 IF LEFT$(a$,1)=":" THEN 2690
2260 IF MID$(a$,t,1)="-" OR (MID$(a$,t,1)=" " AND MID$(a$,t+1,1)=".") THEN p=t-1:b$=LEFT$(a$,p):t= LEN (a$)
2390 IF LEFT$(e$,1)=".:" THEN 2590
2450 IF LEFT$(e$,1)=".:" THEN 2590
3110 IF n=2 THEN PRINT TAB(20);c$;",&;
HEX$(PEEK(a+1));:a=a+2
3120 IF n=3 THEN PRINT TAB(20);c$;",&;
HEX$(PEEK(a+2)*256+PEEK(a+1),4);:a=a+3
```

Add these lines:

```
3101 IF n=2 AND (PEEK(a)=&18 OR PEEK(a)=&10) THEN PRINT
TAB(20);c$;" &;HEX$(PEEK(a+1));:a=a+2:GOTO 3130
3102 IF n=3 AND (PEEK(a)=&C3 OR PEEK(a)=&CD) THEN PRINT
TAB(20);c$;" &;HEX$(PEEK(a+2)*256+PEEK(a+1),4);:
a=a+3:GOTO 3130
```

Load **ASMBPROG.BAS**, make the alterations and save the file as **AMCUSTOM.BAS**. Source code must now follow these rules:

- Opcodes and data are split by a comma (10 'ld a,27).
- Labels must start with a colon (10 ':loop ld bc,2000).
- CALL, DJNZ, JR and JP instructions no longer need a dash (or comma) between opcode and label – a space must be present (CALL :txt).

When an area of memory is disassembled, all the above rules are obeyed. Oddities still exist: these will be ironed out over the months. Source listings will appear in up-to-date-**MA** format and standard format. Be sure to alter **MA** when we publish modifications: if you don't you'll find the listings won't work. You've been warned.

PROBLEM ATTIC

Can Pat McDonald save the world again? Nope.

Even more basic

I have recently upgraded my 464 into a 6128 by having the 40025 Basic ROM fitted (by an authorized service agent). I now want to use the extra commands that a 6128 has in my Basic programs, but don't know how to.

I've been to my local computer shop (Soft Spot) but, although they tried very hard, they couldn't help and suggested you. Please tell me just what advantage I have now!

Martin Powell, Daventry

Basic 1.1 (which the 664 also has) is a fair improvement over the original. A full listing of the new commands would take up too much space, so I suggest you buy a 6128 manual. They're available from CPC Ltd, 0772 555034. They'll supply one for £12.83, which includes postage and packing as well as VAT.

Until you do splash out on such a manual, just try this one command. Put the graphics cursor somewhere on the screen using |MOVE, and then put in |FILL,inknumber. Also, when using RSX's, you can put data into the command, like this: |REN, "NEWNAME", "OLDNAME". Much better than a\$="OLDNAME": b\$="NEWNAME", and then |REN, @a\$, @b\$.

Death knell

Last night I switched on my CPC464 and promptly got an electric shock when I picked up my JY2. As a result of this my machine has stopped producing any sounds except for hisses.

Software loads into memory but no there are no in-game effects. What's wrong? Will it cost much to repair, and can I do it?

Mark Walker, Folkestone

I recently gave the office a cheap laugh when I attempted to repair a similar fault (considering how much it's costing to repair your repair, McDonald, I don't think 'cheap laugh' is quite right - ed). The problem lies in incorrect wiring inside the Amstrad that goes to the AY-3-8912 sound chip, which is also responsible for reading the keyboard and (naturally) the joystick. Occasionally

Main news of the day

I bought my CPC464 at the beginning of the year, and am slowly learning programming. Absolute Beginners is a great help. I have recently bought the October edition of Amstrad Action with the free cover cassette.

Side 1 - Dizzy - is OK, but the reverse side will not load. I keep getting the message **Read error b**. I wondered if any other people had wrote to advise you of this fault, or if it is just my copy. I would be interested to hear your comments regarding the cassette.

J E Audsley, Dewsbury

Many readers have congratulated us on the contents of the cover tape - and I'd like to extend a big 'Thank You' to everyone who contributed (Your cheques will be in the post soon!).

No copying process, however, is perfect. This page is being written two

weeks after the release of AA37. So far complaints received total 27. Allowing for one person in ten writing in, that means that perhaps 300 tapes did not work.

Out of 47,000+ reproduced, that figure is pretty good. So bad tapes occur less than one percent of the time. We'd prefer there to be no bad copies - but realistically, there always are some.

If you do get problems with loading, the first thing to do is just try listening to the tape. See if the quality of the tape is very bad. In general the CPC's can cope with all but the worst in quality - look for things like tape speed up and slow down, high/low pitch or volume.

Another problem is head azimuth alignment. The head that reads the tape works best when it's more or less at right angles to the tape, but the tape direction can vary. This is more of a problem with 6128's - the external recorder can be set to virtually anything, and need not nec-

essarily be a machine similar to the 464's internal cassette. Indeed, the vast majority of problems have occurred with 6128 owners.

If you have a reasonable quality of tape, then I suggest you try as hard as possible to get the tape working yourself. The way you do is the is to: a) try altering the volume, and if that fails, b) start adjusting the azimuth. Always apply tiny adjustments, and remember the position you started at.

If you still can't get any joy at all, then the only course open to you is to send it back to us, and we'll replace it for you. Bear in mind though, that although we test the replacements on a 464/6128 as applicable, there's no guarantee it will work on your system. Still, we'll hold the offer open for six months. Get your naff tapes back to: Duff tapes, Amstrad Action, Future Publishing, 4 Queen St, Bath BA1 1EJ. And once more, apologies.

static builds up on the joystick, and picking it up results in a voltage going through the chip that wrecks the sound.

Replacing the chip is a problem because it's generally soldered in. If there is a socket for the chip, then unplugging the chip and plugging in a replacement (widely available - try CPC if you have difficulties) is no problem.

De-soldering the chip is a lot trickier, and is generally best left to a decent repair service - Analytical Engineering are doing our 464 as I'm writing this. If your machine is under guarantee take it back to where you bought it.

Languages, actually - what about you?

I am preparing for going on to university and I am keen to learn a new language for a degree. I have heard it is best to learn Cobol as it is one of the main languages you use. Is this true? If so, can you recommend such a language, costing a maximum of £60?

If it best to learn another language, can you recommend any other packages. I have a fairly good knowledge of Basic but not machine code, and I own a 6128.

S D Griffiths, Harpsden

Depends. If you're going into a business orientated course, then Cobol will be taught to you anyway. Otherwise, who can tell? The best thing is if you ask around when you get there what will help you - there's not a lot of point me telling you to go and buy Pascal if you'll be using C!

Two companies who produce various languages for the CPC are HiSoft (0525 718181) and Arnor (0733 239011). Both produce fair quality languages, although Hisoft have a larger range. For your original suggestion, Nevada Cobol is very good. Also look out for Turbo Pascal - these languages run on CPM+, and so are OK for 6128's.

Another possible source is Wacci's excellent Public Domain Library. See the adverts in AA in recent months - just because the languages are cheap doesn't mean they're no good. Documentation (manuals and so forth) can be scanty though.

!! NOW SPEEDTRANS PLUS HAS EVEN MORE TO OFFER !!

SPEEDTRANS PLUS2

For CPC6128 (or 464/664 with DK Tronics 64K (or larger) Memory)
Once the programs has been transferred to disc IT WILL RUN ON ANY CPC.

SPEEDTRANS PLUS2 now handles the VERY LATEST Speedlock types automatically. No need to hold a key down at anytime during loading. SPEEDTRANS PLUS2 also saves 99% of opening screens and saves them in their full colours

FULLY AUTOMATIC – JUST ONE KEYPRESS * ONLY ONE PROGRAM TO RUN WHICH FINDS THE SPEEDLOCK TYPE AUTOMATICALLY * WILL TRANSFER ORIGINAL AND MANY OF TODAYS SPEEDLOCK PROGRAMS * NO FIDDLE OR MEDDLING – WRITTEN WITH THE AMATEUR IN MIND * AUTOMATIC DISC FILENAMES * NO WASTED DISC SPACE * SAVES THE CORRECT AMOUNT OF GAME CODE * SAVES 99% OF OPENING SCREENS * SCREENS SAVED IN THEIR CORRECT COLOURS * COMPRESSES SCREEN CODE TO SAVE EVEN MORE DISC SPACE * FASTER LOADING TIMES FROM DISC BECAUSE OF SHORTER FILE LENGTHS

SPEEDTRANS PLUS2 transfers over 200 programs to Disc, some of the latest it will do are MADBALLS, FREDDY HARDEST (both games) BASKET MASTER, MATCHDAY II, PHANTOM CLUB, GRYZOR (main program), SUPER HANG ON.

These latest Speedlock types can be identified by the whole screen flashing with horizontal bands of colour immediately after the first file has loaded. Do remember that **SPEEDTRANS PLUS2** does not save all the memory in the hope of having saved all the game. It saves exactly the right length of code. All screens are saved in compressed form – some as little as 4K (Basket Master) - thus saving even more disc space.

SPEEDTRANS PLUS2 is the most sophisticated Tape-to-Disc transfer utility for SPEEDLOCK protected programs ever published. It will certainly transfer more games than any other Speedlock transfer program on the market and with much greater ease. Other transfer programs require you to know how long the game code is so that you may run an alternative program for the long games which does not save the loading screen. This is done because they do not make use of the extra memory available on the CPC 6128 or from the use of an extra RAMPACK (DK Tronics 64K or greater.) This program is highly intelligent in that it first reads the loader from the tape and establishes which type of protection is in use from 6 alternatives. At the end of the load then finds out how long the code is and if it is too long to be saved to one file it will move the excess code into the banked memory and save the game in two parts and write the appropriate loader program. The screen will also be moved into a bank and compressed before saving. This can mean screen files as small as 4K (Basket Master) depending on mode and content. All this adds up to a lot less disc space being used than with other transfer programs and you will nearly always get the loading screen saved. The exception to this is when there is no loading screen (as in SCRABBLE) or when the screen is blanked out and more code is loaded into the screen memory, as in BMX SIMULATOR and MADBALLS for example. Try getting a screen with Multiface or any other imager. These imagers are only capable of saving what you have in memory at the time the button is pressed. What happens in multi part games? you have to press the button for each part thus wasting precious disc space. They also save far too much code and therefore waste even more space and saving too much code means longer loading times from disc. Programmers are now checking to see if you have an imager plugged in and if you have the program will not load. Imagers also have to be in place before you can reload your program and saved programs can only be reloaded in to the machine in which they are saved. **SPEEDTRANS PLUS2** creates totally stand-alone files and if you have no other CPC even without extra memory they will run perfectly. It also displays the saving name on screen at the start of the load with all except the very latest games. In all cases the disc saving name is displayed while the save is carried out. To run the transferred game just RUN this name. Another intelligent feature of **SPEEDTRANS PLUS2** is that the very first thing it does is to find out which drive it is in. This means that if you have a two drive system you may run the program from drive B by typing RUN "B:DISC" or "B:RUN"DISC. However the saving will ALWAYS be to DRIVE A so with a single drive you must change the disc when prompted on screen.

DMP 2000/2160/3000/3160

The printer buffer presently in the DMP 200/3000 series is a 2K RAM. Most of this RAM is used by the printer's operating system leaving an average 1/2K as buffer space. Our upgrade kit contains a new static RAM chip which will increase the printer buffer by 6K (about 4 pages of text). This upgrade allows all Download Characters to be re-defined allowing the user to design special characters for use with scientific and other programs. The kit is supplied with full pictorial instructions to allow the amateur to carry out his own modification (the DMP2160 takes about 7 minutes). If you don't think you are up to it your local TV shop can do the job in approximately 15 minutes

UK £12.50 – EUROPE £13.75 – R. of W. £14.50

FIRETRANS

This utility will transfer a number of FIREBIRD programs from tape to disc automatically including most opening screens in full colour. FIRETRANS will work equally well from tape but will be more convenient to use if converted to disc with SAMSON/Transmat. It will transfer WILLOW PATTERN, RUNESTONE, CHIMERA, GUNSTAR, PARABOLA, REALM, SPIKY HAROLD, BOOTY, DON'T PANIC, GUNFIGHT, STARGLIDER, NINJA MASTER, HELICOPTER, and some version of THRUST, HARVEY HEADBANGER and BOMBSCAPE.

TAPE:- UK £5.00 – EUROPE £6.25 R. of W. £7.00
DISC:- UK £8.50 – EUROPE £9.75 – R. of W. £10.50

TRANSIT

TRANSIT is a disc-to-disc file copier which handles file upto 40K in length in one pass. It will copy from drives A-A, A-B, B-B and B-A making an ideal utility for use with 5 1/4" second drive.

TAPE:- UK £4.50 – EUROPE £5.25 – R. of W. £6.50

ADVANCED MUSIC SYSTEM

When you buy Rainbird's Advanced Music System from us we will give you

ABSOLUTELY FREE OF CHARGE

A disk containing THE GOLDMARK COLLECTION of virtuoso demonstration music files by Rob Baxter some of which have been written especially for us

UK £26.00 – EUROPE £27.25 R. of W. £28.00

Please send your cheque (£ Sterling) Eurocheque OR UK P.O. to
**GOLDMARK SYSTEMS, 51 COMET ROAD, HATFIELD, HERTFORDSHIRE,
AL10 0SY, ENGLAND**

Please write or telephone (0702 71529 for full brochure.

NIRVANA

Have you tried backing up your original expensive disc software and failed? Use **NIRVANA** before its too late! **NIRVANA** (meaning enlightenment) is an extremely powerful disc handling utility which has the following features: Disc to disc back-up copier which will handle most of the commercially protected discs available today. File copier for individual files. Disc formatter, much easier to use than CPM. Change file attributes. Erase files. Change filenames. Will handle all disc drive combinations

DISC:- UK £14.99 – EUROPE £16.25 – R. of W. £17.00

SHAREPLAY

THE STOCK MARKET SIMULATION
(All CPC's)

This is a serious educational program for 1 to 6 players and provides all the enjoyment of playing the stockmarket without any risk of personal bankruptcy!! Each player can buy and sell shares and the target is the first to reach £1,000,000. The program includes a stockholding portfolio listing the shares purchased, their number, cost and market value. Bank balances are also shown. Graphical representation of market fluctuations are given in the form of a bar graph. Also included is a high score table. Scores are automatically saved at the end of each session.

DISC:- UK £14.99 – EUROPE £16.25 – R. of W. £17.00

WORDSEEK

THE WORDSEARCH PROGRAM
(All CPC's)

This educational program will tax even the most agile mind. The aim is to find the hidden words in a 15 by 15 puzzle within a set time limit of 30 seconds. The time limit is extended for every correct letter of the current word found. You may create your own puzzle consisting of up to 10 words which can be saved to disc and used at any time. You may only retain one puzzle at a time but if you choose not to use your own puzzle then the program will randomly select one from the library of 50 on the disc. All of the puzzles in the library are made up of 10 words each consisting of 1x8 letter, 1x7 letter, 2x6 letter, 3x5 letter, 2x4 letter and 1x3 letter words. This ensures equal difficulty regardless which one is randomly loaded. The program contains a print option (for Epson compatible printers) allowing a hard copy to be made of any puzzle created. Keyboard/Joystick options are also available.

DISC ONLY – U.K. £14.99 – EUROPE £16.25
REST OF THE WORLD £17.00

TUNESMITH

TUNESMITH is a simple to use sound utility which allows you to use the keyboard to play and record your tunes. No knowledge of music or Amstrad sound commands is required all you need to be able to do is whistle the tune you play or record. The octave and period of notes is variable and the program includes synthesizer and vibrato effects. **TUNESMITH** will save any tune as a basic file which can be RUN, CHAINED or MERGED into your own program.

DISC:- UK £14.99 – EUROPE £16.25 R. of W. £17.00

SAMSON

SAMSON has been developed by us to transfer not only the normal programs but also many of todays where the code is much longer. **SAMSON** differs in many ways from other Tape-to-Disc utilities, the main differences being: * **SAMSON** retains original file suffixes (.SAMSON, SCN) will be saved as .SAMSON, SCN) * Improved file relocation method * Elaborate Tape-read/Disc-write system which reduces Tape Motor, Slave Replay and Disc Drive Motor wear substantially. * A large reduction in tape transfer time is also achieved in all but a few cases * NEW "SPLIT" option for todays longer games (we will be using this option in future routines) * All file information is displayed on screen and can be echoed to your printer if needed. **SAMSON** also transfer itself to disc.

TAPE:- UK £7.50 – EUROPE £8.75 – R. of W. £9.50

DISC:- UK £11.50 – EUROPE £12.75 – R. of W. £13.50

CHARACTER DESIGNER

(All CPC's)

- * REDEFINE YOUR PRINTER DOWNLOAD CHARACTERS
- * REDEFINE THE COMPUTER SCREEN FONT
- * REDEFINE ANY/ALL KEYBOARD KEYS (ASWERTY)
- * DESIGN SPECIAL SCIENTIFIC CHARACTERS/FONTS

Takes all the hard work out of character designing making it a pleasure. The printer part of the program will only work if your printer is capable of DOWNLOADING and is EPSON compatible – see your printer manual. Works with 7-bit or 8-bit output (8-bit port). All the designing is done "On-Screen" so you can see exactly what you are doing. You can save your newly designed characters to disc and reload them at any time into a basic program and into most Word-Processors. The program also allows the user to redefine any or all of the keys on the keyboard. This feature will be useful for those who require an ASWERTY keyboard. The disc also contains twelve sample fonts for experimentation

TAPE:- UK £7.99 – EUROPE £9.25 – R. of W. £10.00

DISC:- UK £11.99 – EUROPE £13.25 – R. of W. £14.00

FAST FORMATTER

The FASTFORMATTER will format one side of a disc in approx. 30 seconds with the choice of DATA, VENDOR or SYSTEM and its much easier than using your CPM disc.

TAPE:- UK £4.50 – EUROPE £5.25 – R. of W. £6.50

DISC:- UK £8.00 – EUROPE £9.25 – R. of W. £10.00

COMPACTOR

COMPACTOR will allow you to load a standard 17K screen, set the mode, border and ink colours and then save it as a compressed screen containing its own mode and ink colour information. Most screens compact down to an average of 9K which is an enormous saving on disc space. Loading time of compressed screens is also proportionately reduced.

TAPE:- UK £5.00 – EUROPE £6.25 R. of W. £7.00

DISC:- UK £8.50 – EUROPE £9.75 – R. of W. £10.50

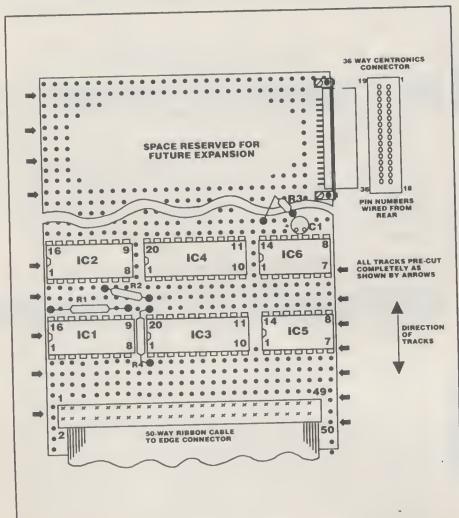

SOLDERING ON

Paul Calter presents another very useful project – an 8 bit printer port

This project is an 8 bit data port, which would normally be used as a printer driver. It's possible, though, to use it to communicate with any device which uses an 8-bit interface with strobed output and a high BUSY input.

The main advantage of this project over the standard 7 bit interface is that you can send codes greater than 127 without any problem – useful for sending IBM control codes, and also for Epson screen dump programs that use quadruple density graphics.

The end result is that what comes out of your printer looks even better.

Description

The circuit consists of only six chips. IC1 and IC2 (a 74-133 and 74-138) decode the address bus, and, together with \overline{IORQ} , produce two signals, SEL0 and SEL1. These are equivalent to I/O addresses &FBF8 and &FBF9.

SEL0 and SEL1 are gated with WR or RD on IC5 (a 74-02) to give three signals.

1. IC-5 pin 13 Causes a byte to be read, via IC-4, bit 0 of which indicates the state of printer BUSY.
2. IC-5 pin 10 Causes a byte to be written into IC-5, (74-273), an 8-bit latch.
3. IC-5 pin 4 This causes IC-6, a one shot timer, to produce a 50 uS strobe pulse (simplifies the program code.)

I/O Address Table

	WR	RD
Address &FBF8	strobe	busy
Address &FBF9	data	n/a

14	1-14	A-14	5-8	A-21	X	+5V	+5V
15	1-15	A-15	5-5	C-7	X		
16	2-3	+5V	+5V	C-8	X		
17	2-2			A-20	C-11		
18	2-1			A-19	X		
19	3-18			C-9	5-13		
20	3-17			+5V	+5V		
21	3-14						
22	3-13						
23	3-8						
24	3-7						
25	3-4						
26	3-3						
27	+5V						
28	X						
29	X						
30	X						
31	2-4						
32	5-11						
33	5-9						

This wire-list indicates which pins are connected to which. For example, the list says that IC2 pin 5 should connect to 1-9. Looking at IC1 pin 9, you can see it connects to 2-5, which is IC2 pin 5.

Where there are two numbers, for example IC5 pin 3, that pin connects to both pins listed, in this example A-8 as well as 5-2.

X means no connection to that pin. Pins 34-50 of the Amstrad connector should be left unconnected, as well as pins 12-18 and 30-36 of the Centronics connector. Pins 19-29 of the same should be connected to GND (0V).

Driving the port

The software provided works with Basic, and with any software using the standard Amsdos calls. Software which has its own driver routines (e.g. CPM and most word-processors) need to be patched to use this port. It's regrettable, but necessary for any piece of replacement hardware.

Construction

The circuit is built on Vero-Q stripboard, which has pre-cut etches especially made for IC use. A choice of edge connectors is offered. If the cheaper board mounted version is used, the components have to be

placed far enough up the board so as not to interfere with the rest of the keyboard. Also, it should be noted that the board is then vertical, and could obscure part of the screen.

First stage of construction involves soldering the chip sockets. These are fairly necessary for the project, especially for the 74-133 which is a CMOS chip and very vulnerable to static electricity.

Next solder in the 'discrete' components. That's the technical term for resistors, diodes, capacitors, potentiometers – basically everything that's not a chip or transistor. Make sure that you get C1 the right way round – use previous issues and deter-

mine which is the anode (positive leg).

The links are made of wire wrap. This is used a lot in prototypes/hobby use, and is necessary due to the large number of links in the project – using standard wire makes the project more difficult, because it's a little thick and unwieldy for this sort of job.

Once you have made all the links it's a good idea to check them properly using a multimeter, a device that can measure current, resistance and voltage between any two points on a circuit. A good link has a resistance close to 0 Ohms. If you don't have a friend from whom you can borrow one, then Maplin do a reasonable multimeter for £6.95 (code YJ06G). If you're intent on dabbling in electronics it makes sense to get one.

When you're happy about the connections, carefully insert the chips. If you can, try and touch a water pipe or similar metal structure, to earth yourself. That way any buildup of static electricity on you is

Use it!

When you have the device powered up, you have to type in and run the listing before you can use the port. Oh, and you need a new printer cable, Centronics to Centronics rather than the standard Amstrad edge connector/Centronics lead. Have fun.

drained and won't damage the chips.

And finally, before you switch on, do make sure that the IC's are connected with the dimple the right way round!

Who, me?

Grovelling apologies for last month's wiring diagram. Here is how it should have looked – honest!

All aboard!

No excuses – if you have a project, we want it now! We prefer, small, easy-to-build – and cheap – designs, but we consider everything. And we pay too: between £40-£60 according to quality and presentation.

It's a good idea to include full diagrams. Our skilled and dedicated art staff redraw them (*incorrectly*), so don't worry if it isn't brilliant – make it clear and easy to understand. Send your Cray 2 second processor to: *Hardware Projects, Amstrad Action, 4 Queen St, Bath BA1 1EJ*.

THE LOOK

An introduction to graphics – part two

Well, did anyone manage to decipher last month's conundrum? The byte-to-pixel arrangement is very strange indeed on the Amstrad, so I'd be surprised if anyone did manage it without help.

Mode 0 is perhaps the easiest to describe. A byte of screen memory (which runs from 49152 to 65535 – remember?) can be represented in binary form as eight bits, or switches, which can contain either a 1 or 0, on or off.

This screen mode is used a lot for games, because it has 16 colours. These are numbered from 0-15, and it just so happens that in binary this takes four bits, or switches. So it would seem that there is room to represent two colours in one byte: each colour would be used for one pixel, or dot.

The obvious way of using half a byte would be to cut it in two. CPC's don't take this approach – a pixel is represented by alternate bits in screen memory. Left pixels occupy bits 7,5,3 and 1; right pixels bits 6,4,2 and 0. So putting screen colours directly onto the screen is pretty difficult for your average human.

To illustrate, try this short listing:

```
10 BORDER 0:INK 0,0:INK 15,26:PAPER
 0:MODE 0
20 POKE 49152,170:CALL &BB18
30 REM Left pixel is now lit
   with ink 15 - press a key
40 POKE 49152,85:CALL &BB18
50 REM Right pixel is now lit
   with ink 15 - press a key
```

Mode 1 works along very similar lines. This only has four colours, numbered 0-3. A value of up to four takes just two bits to represent, so four pixels (four times two is eight – eight bits in a byte) can be represented in one byte.

From left to right, the bits used for inks are: 7 + 3, 6 + 2, 5 + 1 and 4 + 0. Weird isn't it? This might make things a little clearer.

```
10 BORDER 0:INK 0,0:INK 3,26:PAPER
 0:MODE 1
20 POKE 49152,136:CALL &BB18
30 REM Left pixel is now lit with
   ink 3 - press a key
40 POKE 49152,68:CALL &BB18
50 REM Middle left pixel is now lit
   with ink 3 - press a key
```

Take my breath away

Looking at this system for graphics, you might well look at your Amstrad in a new light. It has to process all of those ink changes, and put the right bit pattern onto the screen for the right ink.

Let's take a look at some Locomotive Basic commands that do interesting things to the screen.

PRINT: standard way of putting characters onto screen. It's generally followed by some characters held within quote marks, e.g. "This is a PRINT statement".

LOCATE: moves current position for printing to the two values immediately after the statement. Like so: 1,1 moves the print position to the top left corner of the screen.

INK: changes colour in a given pen. Flashing colours can be selected by inserting two colour values rather than just one.

BORDER: as above, but for border colour.

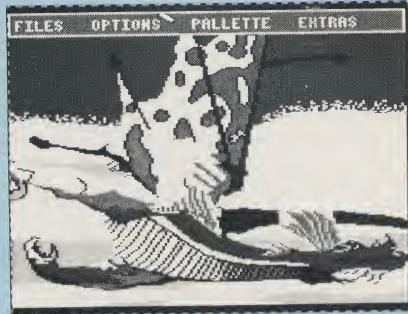

PEN: selection of the foreground colour to print with.

PAPER: as above, but for printing background colour.

```
60 POKE 49152,34:CALL &BB18
70 REM Middle right pixel is now
   lit with ink 3 - press a key
80 POKE 49152,17:CALL &BB18
90 REM Right pixel is now lit with
   ink 3 - press a key
```

I certainly wasn't planning on the postal strike when I announced the gallery last month. Still, congratulations to those who managed to get their contributions through, and initial reaction suggests that *The Look* is going to be very popular indeed. Watch this space...

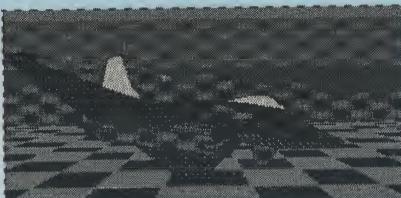

● Dragon – A pretty contribution done with Smart II. Mike Davies, Normanton

The gallery

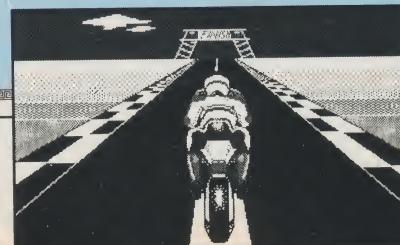

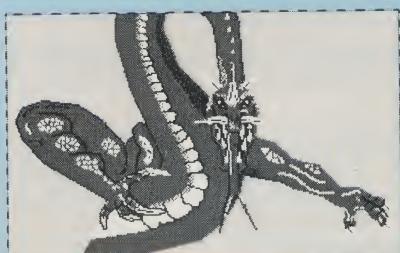

Reward: £20

Mark all entries with your name and address, state what art package was used (even better, do a Basic loader to set up the screen colours) then post them to: *The Look*, AA, 4 Queen St, Bath BA1 1EJ.

● EuroFighter – sometimes detail isn't as important as shape. J. Murray, Rayleigh

● Dragon, Madonna, Bike – A very good collection indeed. Well done C. S. Coles of Weymouth, you win £20

WIN WITH COURSEMASTER THE COMPUTER HORSERACING PROGRAMME

- ★ RATES ANY RACE IN SECONDS - ANY DAILY NEWSPAPER IS ALL YOU NEED
- ★ NEVER out of date - Both N. Hunt and Flat - Fast data entry
- ★ AMAZING ACCURACY !! - Now you CAN BEAT THE BOOKIE !!
- ★ Works on the simple principle that FAST HORSES BEAT SLOW ONES !!!!
- ★ Clearly identifies best selection in every race plus these AMAZING Features :-
- ★ First, Second and Third choice shown for forecasts and Tricasts etc. Recommends most suitable type of bet.
- ★ Actually works out your Winnings on most popular bets including SINGLES and DOUBLES, win and each way, PATENTS, YANKEES, CANADIANS, HEINZ etc. Good EACH WAY and LONG ODDS bets clearly shown
- ★ Will PRINT out your BETTING SLIP for you
- ★ Maintains a BANK ACCOUNT - BET Like PROFESSIONALS Do!
- ★ PLUS !! - THE AMAZING COURSEMASTER SYSTEM. Try it! Can pay for itself many times over on the first day !
- ★ Supplied with 20 page BETTING GUIDE and MANUAL.

FREE HOT TIP OF THE MONTH TO EVERY PURCHASER

All For £14.95 inc Post + packing (Disc users please add £2.00 for disc) Available now for all Spectrums (inc + 3 disc version) Commodore 64/128 Sinclair QL, (add £1.00 for mdrive) Amstrad CPC, all PCW's BBC and Electron. Please state which.

£ PROFIT FROM YOUR MICRO YOUR OWN SMALL BUSINESS USING MICRO

- WHATEVER your MICRO is you can use it to make a good income! Even if you only have a couple of hours spare each week !
- We have put together a package of easy, sensible and practical business ideas which can easily be used by anyone with any micro. No computer expertise required !!
- Earn ££'s from home doing what you enjoy doing - using your COMPUTER! It doesn't matter which model.
- You probably already have all you need to start earning.

Gets the toughest games going!

The Bard's Tale

After delving deeply into the cassette version of the game and working out which byte does what a poke for a super party was

conjured. Type in the poke and put a tape with a saved party in the cassette deck. Run the poke and the party is loaded and modified. Press a key to save the party back to tape and you find your characters are considerably more powerful, possessing lots of hit points, magic points, experience and gold. It also makes all spell casters capable of casting the four types of magic at seventh level.

The levels of the characters are not altered – neither are the statistics – but that's simple to rectify. Go to the Review

Board and choose Advancement. You have ridiculous amounts of experience and so you can make the character keep going up levels until you get bored. This further increases your magic points, hit points and statistics. Statistics level out at 18 for each one and won't increase beyond that.

If you want to enter the catacombs beneath the temple speak to the priest and say 'TARJAN'.

POKE METHODS ON TAPE

Here's how to input most Cheat Mode tape pokes – the instructions for each poke tell you which of the two to use. 664 and 6128 owners: first type 1 tape.

METHOD 1

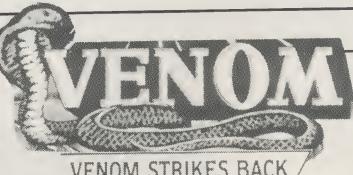

Rewind the game tape to the beginning, type in the poke listing and then type RUN and press the Enter key. (Don't use the key marked CTRL or Control, or the poke won't work.) Press the Play key on the cassette deck, then any key on the main keyboard - spacebar does nicely. The tape should now play through as normal.

METHOD 2

Skip the first bit of the game program. To do this, rewind the game tape to the beginning; type in the listing; now type CAT and press Enter. Start the tape by pressing Play and then any key. Soon you'll see the message: "Found something Block 1". It doesn't matter what the something is, and it varies from game to game. If the Cheat Mode instructions just tell you to skip the first block, stop the tape here.

If the instructions tell you to skip things, stop the tape when the "Found" message comes up for the last thing you're trying to skip.

Once you've stopped the tape, press Escape, type RUN and press Enter. Now press Play on the tape deck and any key on the keyboard to start the tape.

VENOM STRIKES BACK

Gremlin's third Mask game is split into sections, and passwords are needed to move between them.

R.N. Carter of Boston has supplied the passwords: Mayhem, Transmogrify and Valkyr.

Cholo

Firebird's game of robotic exploration gets hacked to pieces by Julian Page of Shrewsbury. Type in the poke, RUN it with the Cholo disk in the drive and follow the on-screen prompts.

Impact

Neil MacDougall of Chipping Sodbury has hacked into the disk version of Audiogenic's Rave game. It gives you either infinite lives or an extra one every 10,000 points. Type in the poke and run it with the Impact disk in the drive.

```

Maxam 1.5 ROM

At last, due to massive public demand, we have produced an enhanced Maxam ROM especially for Protext users. The editor has been taken out, and you can now assemble your source code simply by typing ASM while it is in Protext's memory. Debugging is now easier with comprehensive diagnostics and the ability to change register contents and resume from breakpoints. Other new features include load/save machine code from Protext/Maxam and extra assembler directives. All the other Maxam features are included. ROM: £29.95.

POOLSWINNER II

THE ULTIMATE POOLS PREDICTION PROGRAM

- MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years.
- PREDICTS** Not just SCOREDRAWS, but AWAYS, HOMES and NO SCORES.
- SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- ADAPTABLE** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- LEAGUE AND NON-LEAGUE** All English and Scottish League teams are supported, and also the non-league sides often used on pools coupons.
- PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

PRICE £18.00 (all inclusive)

NOW
AVAILABLE

FIXGEN 88/9

AT LAST! No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish League fixtures for 1988/89. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner. Yearly updates available.

POOLSWINNER with FIXGEN £19.50 (for both)

COURSEWINNER v3

THE PUNTERS COMPUTER PROGRAM

You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc, etc. It outputs most likely winners, good long odds bets, forecasts, trifcarts etc. The database includes vital course statistics for all British courses. You can update the database - never goes out of date. **FULL PRINTER SUPPORT**.

PRICE £18.00 (all inclusive) includes Flat AND National Hunt versions.

The black box

Most games are heavily protected these days, resulting in longer pokes.

Many of you have one of the infamous black boxes that can be used to stop programs – the **Multiface 2** from Romantic Robot for example.

Often the only thing that they're used for is transferring games from tape to disk, but they can also be used to hack games for infinite lives etc.

This new occasional section is for owners of the **Multiface 2** and similar devices so that they can poke games without typing in huge listings.

Here's how you enter them:

- Plug the **Multiface** into the expansion slot at the back of your keyboard. (**Multiface 2** owners: make sure that the switch on the front is in the up position.)

- Load the game that you want to poke in the usual manner following the instructions supplied with it. (**Multiface 2** owners: move the switch to the down position after it has loaded.)

- Press the red button on the **Multiface** and a menu appears at the bottom of the screen. Press 'T' for tool and then 'H' to change input to hexadecimal.

- Press the spacebar and type in the number under the Addr column. Next type in the number under the Poke column. Repeat this process until you've entered all of the pokes that are listed for the game and then press 'ESC'.

- Press 'R' to return to the game: it then runs with the pokes that you've just entered.

Game	Addr	Poke	Effect
Impact	6be1	00	Extra Life
	6be2	00	every 10,000
	6be3	00	points.
Impact	6f94	00	Infinite
	6f95	c3	lives.
Batman	7428	00	Inf. Lives
Cauldron II	1c90	00	Inf. Lives
Dun Darach	792a	18	Open all doors
Green Beret	13c9	b7	Inf. Flame Thrower
Spindizzy	a85e	c9	Infinite Time
	720°	9528	Inf. Credits
Rygar	80b8	00	Inf. Tickets
	2c38	a7	Inf. Lives

Shorten the odds

- We receive dozens of pokes, and the ones published tend to be on cassette or disk, unless they're very short (get the hint?).
- Include an SAE if you want your disk or tape returned.
- Make sure your name and address is on everything you send us!

Win an ENTIRE ISSUE'S RAVES!

To win an entire issue's *Rave* software – and that includes the *Mastergame* – all you have to do is produce an excellent map, poke or set of playing tips.

The best solution each month wins a copy of every *Rave* and the *Mastergame* of that issue. The number of games varies of course, but in a good issue it can be half a dozen. We also give runner-up prizes every month of a *Rave* or the *Mastergame*.

This month's prize of £5,000,000 goes to Gary Barrett. Ok, the real winner of the *Mastergame* and all the *Raves* this month is Mike Wong for his assortment of pokes. The runners up who each receive a *Rave* or the *Mastergame* are Julian Page and Neil MacDougall. Congratulations all, and keep them coming – we appreciate your efforts! (And to all those who send in pokes and maps: if at first you don't succeed, try, try again!)

ONLINE

Making a triumphant return...

CYMRUTEL

0492 49194 • 1200/75 Viewdata 7 data, even parity one stop bit • Sysop: Ian Woodroffe

It's pronounced 'Com-ritel', and it's been in operation for around about a year. Old hat? Well, it seems that a number of improvements have taken place...

Cymrotel is based in North Wales. Once upon a time, it was a perfectly ordinary bulletin board, with few pretensions at all. Nowadays it has a vibrant, glitzy feel. It's going places.

Getting there

Access is through one measly port. That means that guests having a look round can queue for quite a long time – never mind. Once online, you have to declare just who you are. Pseudonyms ('handles') are allowed, although bear in mind that it makes sense to stick to one particular name.

If you like what you see you should register. This is quite a simple matter. You fill out an application form while on the service. A copy is sent to you. After confirming the information you return it, together with a cheque for £12. That pays for a year's subscription.

This is a Good Idea, because all bar one port are reserved for subscribers. You also have fairly well unlimited online time, as opposed to being given the

A promise and a threat

The promise: pretty soon Cymrotel will be downloading satellite pictures from MeteorSat. Apparently they already have the equipment, they're just working out how to connect it... This system should be up and running within a few months.

And the threat: the board makes the statement loud and clear; any material contributed which breaks the law or is related to criminal activity will result in the registration being terminated. People requesting such information are tactfully reminded of the rules. Nice one Cymrotel.

PFOD – or Polite Finger Of Disconnection. (Be warned, however: British Telecom present you with a heck of a bill if you stay on too long.) There's also plenty of CUG's (closed user groups, or clubs), and you must be registered to access these.

Becoming an information provider (someone who actually designs the pages) is also possible, and fairly cheap. Paying £25 gets you the title of editor, and it costs £5 for every twenty five pages you can play with. That's for a year.

Facilities

What you can access with the system is nothing outrageous, but nonetheless interesting. To start off with, the viewdata graphics have been used quite well, and the pages generally look well produced. More graphics would have been nice.

Page zero – generally the main menu on viewdata systems – contains a fair range of options, even for guests. There are various SIG's (special interest groups – clubs devoted to one subject), including quite a good one for the CPC. This seems to have a reasonable number of contributors as is, and the numbers should increase even more.

More

One of the main options available is to learn more about Cymrotel. It was first brought online in October 1987, and had very few phone lines. The system has gradually improved (always with the subscriber in mind), and logging on is now quick and easy – they even had the BT engineers in after complaints about line noise.

The location of Cymrotel is significant – the computer, modems etc. are set up in Llandrillo College, Colwyn Bay. A lot of the contributions appear to be from sixth formers (don't let that put you off). Also, the 'hacker as twentieth century wizard' idea (yawn) seems to be prevalent in the various names of the contributors – Gandalf, Paz, Probus, Raistlin and so on. Even Groberts has overtones of the fantastic, until you find that the co-sysop's name is Gareth Roberts.

The system makes some interesting comparison with *Gnome at Home*. They both deal with similar subjects (including roleplaying and adventure games) but, whereas *Gnome* appears to contain more material and variety, *Cymrotel* is better presented, with more logical gateways between points. Try comparing them. Some serious people find this usage of holy processing equipment blasphemous. I can't say I'm one of them, but you have been warned...

Up the revolution

Many people tried leaving a mailbox message at the number in the screen shots of Micronet. That was actually the Micronet page number. If you're still keen on leaving messages on the service (remember it costs money) then our number is 011112623.

It would make a change to get some E-mail as opposed to leaving it on the sundry bulletin boards I visit. I'm especially interested in new CPC related services – but if you think something else is worth a telephone call, use the above facility by all means.

There is some telesoftware on the board. At present there doesn't appear to be any for the CPC's. Still, if they get some contributions Cymrotel might change their policy.

Electronic mail is what keeps the service going. I must admit that going through the previous entries for the past year was quite absorbing, although too many of them were of the 'just testing this out' type – when I read mail, I can do without the junk variety.

One area generally left out of boards or services is comms. I admit that people able to get onto boards generally know enough about the subject anyway, but such services can provide quite a few leads for people who want to learn more about the subject – and that probably includes most of us.

There is a fair old selection of viewdata service telephone numbers, and Cymrotel indicates whether they're 24 hours a day or not. Strangely, it lists itself!

Next month: Microlink – a board that can show you satellite pictures – for a price!

ROMANTIC ROBOT present

1988 - THE YEAR OF THE ROBOT

RESET

Multiface Two

STOP

If you wish to be able to STOP any program at any time and COPY it to disk or tape, fully automatically, at a touch of a button, then MULTIFACE 2+ is the ONLY answer. There are no other comparable hardware devices, and the software copiers simply cannot compete.

Firstly you cannot compare the SUCCESS ratio of any tape copier with the MULTIFACE - you get what you pay for (and we throw in a lot more with the MULTIFACE . . .).

TAPE COPIERS always need to be loaded first, whilst MULTIFACE has all software in ROM for instant use. TAPE COPIERS can only attempt to copy a program as it stands, before it loads - there are various protections in the way and not enough memory for both the program to be copied and the copier. MULTIFACE is different: you can load any program from TAPE or DISK, run it as you wish and activate the MULTIFACE whenever you need it. Once you SAVE a program, be it to DISK or TAPE, you can CONTINUE it, SAVE it again if you wish, etc. In fact, you can play games as never before: there is no need to start from the beginning each time you play a game (as you would with a tape copier - if it could copy in the first place . . .). Since you can SAVE a program at ANY TIME and continue it, you can actually SAVE as you progress through a game. If, eventually, you loose all your lives, you can just load the latest saved version and continue from there! That is, if you do not manage to get INFINITE LIVES to start with: MULTIFACE has a built-in TOOLKIT which allows you to STUDY and ALTER anything in any program; you can thus POKE in infinite lives, ammo, etc. MULTIFACE is extremely simple to use, friendly, idiot-proof, menu-driven with on-screen instructions, fully automatic - PURE MAGIC. It can be used on any CPC, comes with a cable and an extension bus for £47.95 ONLY! By the time you buy 10 programs on tape instead of disk - MULTIFACE will put them on disk for you - you will have saved some £50 which is more than the cost of a MULTIFACE. The money you save on further tapes is all yours!

MULTIFACE - WORTH EVERY PENNY, SAVES YOU POUNDS!

NOW AVAILABLE: MULTIFACE 2 PLUS - THE INVISIBLE ONE.

Tape-to-disk at the touch of a button. Ridiculous, you may say, but it works every time. Multiface can stop any program in its tracks and save the program from memory to either tape or disk. It's completely fool-proof. Similar products have had problems with screen size, colour and even sound: Multiface can handle all these without a second thought.

That alone would have satisfied many people, but Romantic Robot has gone one step further, incorporating a memory editor. No program is safe with this: everything is out in the open, including the Z80 registers, CRTC data and any part of memory.

Don't be fooled into thinking this will result in mass piracy, however. The Multiface unit itself must be plugged into your Amstrad to allow reloading of a program it saved.

Multiface II must be the cleverest hardware device at present - a necessity for disk owners who thought they were stuck with loading from tape every time.

AMSTRAD ACTION JANUARY 1987

WOULD YOU LIKE TO TURN YOUR CPC INTO A PROFESSIONAL SET-UP?

Would you like to be able to attach additional disk drives - 40/80 track, single/double sided, 5.25 or 3.5 or 3 inch - and store up to 800K per disk? All controlled by a powerful DOS? Have RANDOM ACCESS to your files? Get a PRINTER BUFFER and SILICON DISK and a ROM manager and over 50 new bar commands! All this on a single ROM:

RODOS

FOR
ANY CPC
ONLY
£29.95

TOP SECRET
BUT NOT FOR THE
INSIDER

NO PROGRAM IS SAFE ONCE THE
INSIDER GETS IN!

JUST INSTALL INSIDER INTO
MULTIFACE, RUN ANY PROGRAM,
STOP IT AT ANY MOMENT AND
INSIDER REVEALS EVERYTHING:
IT WILL FULLY DISASSEMBLE,
FIND TEXT OR CODE, VIEW/ALTER
MEMORY AND Z80 REGISTERS,
DUMP TO PRINTER - ALL THIS
ON DISK FOR **ONLY £14.95**

INVALUABLE FOR M/CODE USERS
SOLID GOLD FOR HACKERS.

Now also available: RODOS EXTRA on disk for only £9.95. Any RODOS owner will find RODOS EXTRA indispensable: it offers nearly 200K of valuable information how to get the most out of RODOS, with examples of RODOS applications ranging from simple to complex such as a DISK DOCTOR or IBM MSDOS DISK READER. The indispensable EXTRA!

RODOS requires a ROMBOARD. RODOS EXTRA needs RODOS. INSIDER needs MULTIFACE 2.

THE YEAR OF THE ROBOT - BE PART OF IT

PILGRIM

Ingrid's Back AND Lancelot in one issue... yessir, Pilg-Person!

Hail to thee, blithe Pilgrims! In this month's rather cramped edition we have room for red-hot reviews of *Ingrid's Back* and *Lancelot*, plus some great tips for those in distress, and news from adventurers far and wide. Drool, Pilgs, but wipe your chins afterwards!

INGRID'S BACK

Level 9 • All CPC's • £9.95 cass, £14.95 disk

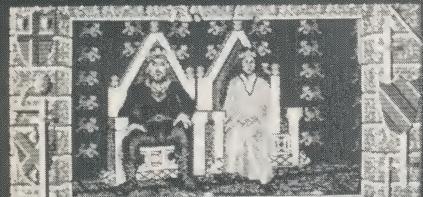

This very pleasing game design marks a substantial improvement on Level 9's previous two titles. Aged Pilgs will remember the distinct disappointment of seeing *Knight Orc*, the first game produced using Level 9's updated adventure system. *Gnome Ranger*, which followed it, was a marginal improvement, but somehow the game still didn't cut the crumpet - though The Pilg should hasten speedily to add that it was still a very impressive release by most adventure standards.

If you really want to understand the good points of *Ingrid's Back* - and it is a good game - you need to know a little about why the previous two games failed and what Level 9 were (and still are) trying to do.

The main feature of their new adventure system is the ability to program characters with whom you can interact. As Pete Austin pointed out to the Pilg some years back now (and I've quoted him endlessly), the number of satisfying and original puzzles you can build nowadays around objects is really very small. The trouble is we've been playing object-oriented games since *Colossal Adventure*. If you think back to any early adventure, I bet you'll find that the most memorable puzzles (if there were any) were to do with objects and their various uses.

For example I always remember the rod which you had to wave in *Colossal*, the rock you had to press in...er...one of those Interceptor adventures, and so on. Of course there were characters in those days, but they were mostly evident in *The Hobbit*. This game's major contribution to adventuring was the character-based puzzle, one of the first examples of which was Thorin carrying you out of the Goblin's Dungeon. Characters have enormous potential as puzzles, together with the added advantage that they can, if well programmed, greatly enhance atmosphere. Object puzzles, on the other hand, are usually rather static - and most of them have been used already.

Level 9 therefore set out to develop a character-based system that would bring games to life. In *Knight Orc*, there were dozens of NPCs (non-player characters controlled by the computer) - as a result of which confusion reigned and the game suffered. Furthermore, the characters were rather boring. After all, there's more to an interesting character than simply being able to give it commands, as you'll see in *Ingrid's Back*.

• pictures showing scenes in Arthur's palatial hall. Hundreds of wall torches gave a flickering light to the room. Inside, it was resounding despite its size. Lancelot could see Gnomes, Sir Kay and King Arthur. Sir Kay sneered at his master across the table. King Arthur said, "Welcome to Camelot, Lancelot. Merlin has foretold that you are fated to become the greatest of all knights. We are honoured to have you at our court".

• *Ingrid's Back* with a vengeance!

Gnome Ranger went a little further, but the characters, although very colourful in a couple of instances, remained rather unimpressive. In *Ingrid's Back*, however, the people you meet and spy upon really do add a lot to the game. Characters, it seems, are growing up. Here's what they get up to...

The story concerns Ingrid's return to her home village of Little Moaning, where all the gnomes-womesies are going about their business completely unaware that the local squire, Jasper Quickbuck, is planning to have them all evicted. The game falls into three parts, each one a separate module that can be played independently of the others.

In the first part, Ingrid has to collect signatures from her fellow gnomes for a petition against the eviction. This is pretty simple, since you can locate most of them by using the game's high-level 'find' command. The main objective of this first part is to get you used to the system, the commands - which include GO TO and RAMsave - and the characters.

In the second part the eviction order is in full swing and the baddies are on the march. Ingrid has to defend Gnettlefield Farm against invading trolls and other representatives of the capitalist tendency.

In the third part, Ingrid enlists as a maid in Jasper Quickbuck's mansion in an attempt to dig up some dirt on the old dirtbag and bring him his just desserts.

Throughout the game, the personalities you meet are full of character, and what's more they carry out many different actions which, when observed, add a great deal to the plot. In fact, in Part III, there's even a character whom you can spy upon through a hole in a wall, watching him go about his (mysterious) business. All this adds enormously to the enjoyment of playing.

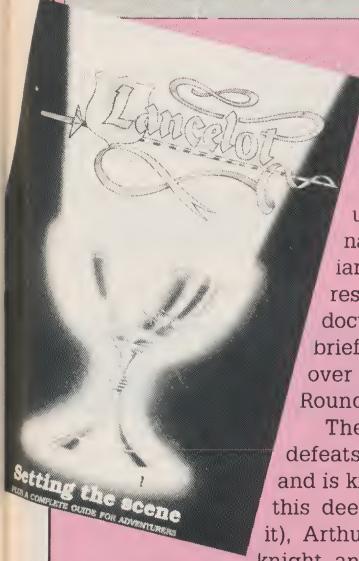

In addition, the graphics for the game are a vast improvement on earlier Level 9 efforts. This improvement is, frankly, long overdue. The first Level 9 graphics, back in the days of Emerald Isle and Red Moon, were pretty ghastly and since then the company never seem to have got to Grips with matters visual. All that's changed now, and the pictures are fabulous. They're not as technically well drawn as the Magnetic Scrolls pictures but I'd venture to say that they have more warmth and character.

Playing the game is a pleasure, with each module having a different feel to it. There's novelty in the first, challenge in the second, and detective work in the third. What more could you want?

LANCELOT

Level 9 • All CPC's • £9.95 cass, £14.95 disk

Level 9 have now turned their backs on Mandarin. It seems to have been a rather brief affair, and *Lancelot* is likely to be the only Level 9 product coming out under this label. Does it deserve this unique status? Certainly the scenario is a potent one. Those not familiar with the Arthurian legends can rest assured that there is adequate documentation with the game, but in brief the saga concerns Arthur's reign over Britain, aided by his Knights of The Round Table.

Thence comes Lancelot, a squire, who defeats Arthur in combat but spares his life and is knighted by the king in recognition of this deed. Guenevere (that's how they spell it), Arthur's wife, takes a fancy to the new knight and Lancelot finds himself bound to her service, both through his own inclinations and her desires.

Level 9's game tries to pack an awful lot into what is essentially a three-part adventure. The first two parts are effectively one, since you can move between them with ease. However, you can also choose, at the beginning of the game, to move straight onto the final chapter – the Search for The Holy Grail.

You start the game outside Camelot and must first fight with Arthur before entering the castle stronghold, where you are knighted and then sent out to win yourself a reputation by rescuing an assortment of captured knights. The puzzles at this stage are extremely simple and this phase, in common with the last three Level 9 3-parters, simply provides an opportunity to get used to the system.

Unfortunately, it also provides an opportunity to discover some very strange programming quirks in the game, which abound throughout all three parts. For example, you cannot remove your armour at will, but find yourself taking it off quite happily before climbing a tree; you can clean your armour, but you can't clean yourself – even though you are dirty, and so on.

There are many trivial illogicalities like these which do not actually affect the gameplay but do seriously mitigate the atmosphere of what could otherwise be a superlative game. The char-

acters also suffer from sloppy programming, from time to time making quite inappropriate remarks, often relating to some action or situation no longer relevant.

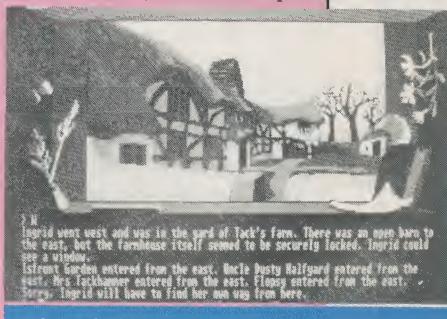

What is far more serious is the actual structure of the game. There's a huge amount of material condensed into this adventure and the space available just isn't enough to do it justice. As a result, great quests which could have made an adventure in themselves are dismissed in a single puzzle, leaving the player feeling, if not cheated, then at least let down.

For example, at one stage you are told to rush off and help raise the siege of Lyonesse. You arrive on the scene, solve one simple puzzle that takes about five minutes, and the whole army surrenders! In another case, you defeat an entire army without solving any puzzles at all! Truly, this *Lancelot* is, as Chaucer put it, a 'parfit knyghte'!

Against these weaknesses you have to place some superb scene-setting in Camelot and elsewhere, and one or two very satisfying puzzles. Furthermore, the character programming, although at times sloppy, shares some of the strengths of *Ingrid's Back* in that you can follow and observe characters getting on with their daily lives – a process that adds greatly to the atmosphere of the game.

The graphics are at times very attractive, but they don't quite match *Ingrid's Back* for quality and, in one or two places, are very poor. Like the game structure itself, the presentation is a curate's egg of powerful, convincing moments, and depressingly low standards. The blurb quotes Pete Austin as saying this is their best game yet, but the Pilg finds it hard to agree. When it hits the high notes, it certainly matches anything the company have done so far, but the low notes seem even more depressing as a result.

What this game shows is that there is a tremendous potential still to be explored in setting text adventures round potent story scenarios such as this one. It also shows that you need either to be very selective in what you try to squeeze into a game, or else you need an awful lot of programming time, disk space, and patient play-testing.

• *Lancelot* hits ye streets!

Empty Tummy — 12 room game incorporating foot-tapping music, devilish gameplay and digitized effects.

Micro-Music Creator

The Micro-Music Creator lets you produce startling three-track musical compositions and digitised sound effects which can be incorporated into your own software — with the minimum of effort.

You don't need a music degree to operate it either. It is powerful and sophisticated, and yet is so simple to use that it soon has you creating Beethoven-like symphonies.

Just look at what it offers:

- ❖ Simple pull-down menu selection
- ❖ Treble and bass clefs
- ❖ 15 pre defined sounds (from piano to cow bell)
- ❖ Uses standard musical notation
- ❖ Music will play in the background
- ❖ Records and plays back digitized sounds.

SPECIAL OFFER! 20% OFF!

To all Amstrad Action readers who reply before 1st November.

Available on tape £7.95, disk £11.95 and rom £19.95

(Normal retail prices: tape £9.95, disk £14.95, rom £24.95)

Please make cheques/PO's payable to:
First Byte Software.

All prices include postage and packing.

**SIREN
SOFTWARE**

ADD A ONE MEGABYTE DISC DRIVE TO YOUR CPC FOR ONLY £124.99

Our 80 track double sided 3.5 inch disc drive will allow you to store upto 800K on a single 3.5 inch disc. 3.5 inch discs are fast becoming the industry standard and have been adopted by Amstrad for the PPC, Atari for the ST and Commodore for the Amiga.

The drive itself is a slimline 1 inch high NEC mechanism and comes cased and complete with power supply and cables. We have 3 different software packages that complete the system, RAMDOS and ROMDOS by KDS software (ROMDOS is a rom version of RAMDOS) or RODOS by Romantic Robot. When ordering please state 464/664/6128. 464 owners must already own a first drive and interface before they can use our disc drive

Enter hex, decimal and binary numbers to add, subtract, multiply, divide, AND, XOR and OR.
- **POWERFUL BLOCK COMMANDS**
Define a block of memory simply by placing a couple of markers from within the memory editor, you can then Alter Block, Move Block, Search Block, Print Block and Save Block.
- **ALL COMMANDS**
All commands easily accessed just by the press of a key. Supplied on a 3" Amsoft disc, complete with a quality manual. Two versions supplied one for 64k machines and one for 128k machines.
ONLY £10.95 INC. P+P

for details

The Pilgrim's postbag

Oh, bugged: *The Hobbit!*

I write to you not in a wild plea of anguish, but to question the parser in *The Hobbit*. I have in my possession the rope...

```
>EXAMINE ROPE
You see the rope
>TIE ROPE
I see nothing to tie the rope to.
>TIE ROPE TO ELROND
The rope is already tied.
```

Now what is going on?!

Mike Wheeler
Surrey

Welcome to the 've discovered a Hobbit bug' club...

Son of Rigel's Revenge - part II

Sorry to have to complain but the *Rigels Revenge* solution doesn't work too well when you give the bone to the wee dog. I tend to get savaged by Mutant Poodles. How do you get past the Fidos and what is the gap you are talking about?

I've played one or two games of the adventure sort and the question I have to ask is why a full list of accepted words isn't printed either in the game or on the packaging. Trying to second guess the parser is a real pain in the neck when you have solved the main problem.

Timothy Bell
County Durham

Well Timothy, the *Rigel's Revenge* clues

Applause for *Bard's Tale*

Although I have eagerly read your part of AA since the beginning, the only adventure I have previously bought is *The Worm in Paradise* by Level 9. However my colour monitor appears to be on its last legs (as does the rest of my 464) and, since games like *Matchday II* and *Target Renegade* are now loading without all except one of the background colours, my interest in these types of game is starting to fade.

I was browsing through the games in the local WH Smith when my eye was caught by a cassette copy of *Bards Tale*. It did not take me very long to decide to buy it when I remembered the contrasting colours in the game and the opinion of it you gave in AA35.

After a few minutes of playing I realised my money had not been wasted, unlike so many games I buy I had found one which I could play not only for one week but one with lasting interest which I could load in again and again.

The thrill of playing an RPG – previously destroyed after attempting to play *D & D* and *Dragon Warriors* with my younger brother and sister – came back to me,

To me, this is what a computer game should be about. I would just like to recommend the *Bard's Tale* to any AA reader whether an adventure fan or not as everyone will enjoy it.

Thomas Page
Address unknown

I've just bought that amazing game *Bard's Tale* and I can tell you it's one of the best adventures that I've ever played. I think Electronic Arts deserve a pat on the back for it. Having followed your column since AA1, I've seen what a great job you've done in helping people solve games and also in bringing news of the latest games for the Amstrad – so now it's my turn to ask. I would be grateful if you could find out when *Bard's Tale 2* is going to be released for the Amstrad.

Tim Gurney
Guildford

Tim, the bad news at the moment is that there are currently no plans to convert BT2 for the CPC's. The good news, however, is that EA were apparently 'delighted' with the sales they achieved with BT and are therefore considering future conversions. Keep your fingers crossed and watch this space...

weren't exactly intended to be a solution! There's much more to the game than that. The clues were simply to point you in the right direction. However, as far as the Mutant Poodles are concerned, try giving

the bone to the dog, then going up, up, w, and then south. The tank should cure the poodle problem. Then SW, up, S, press green button, and jump the gap...

The Pilgrim's clue pot

This month's delicious aroma of serious situations resolved in a deliciously scented stock of sensible solutions is brought to you courtesy of the following almighty Honorary Pilgs:

Timothy Bell, Jamie Tillman, and Brian MacGregor

Kentilla

To fly over to Tylon's castle make Timandra and Zelda meet and then go to the front of Tylons castle. Timandra and Zelda will eventually come, so CLIMB ZELDA and you will be transported to the castle. To open smooth doors pull arm of the gargoyle statue.

To open chest, dip gold key into the barrel to turn it to iron and now open chest. At the waterfall edge tie rope to stalactite.

Examine green emerald in the dark, you will find some words, say these words and... The boat has a giant hole in it so try balancing the water with the chalice. Drop moss in plains then look.

Never Ending Story

Drop coin by Wraith. Say please to open doors leading to the Empress's quarters. Wait till the Sphinx's blink and run south.

Seabase Delta

To wake hen. Go into the room with the basket, open basket, examine basket, a hen will walk out. Now get the chewing gum, go back to hen, chew gum, blow bubble (this will eventually pop) and then the hen will wake up and lay an egg.

The Bards Tale

When mapping, the first map of any sequence enters at the southwest corner, subsequent levels are stacked. Get rid of the thief and get a monk instead. On later levels he will do more damage than any other. Also, he is very useful for carrying things as he is most dangerous unarmed. Are a enchant (mage Spell) is hopeless and doesn't work – don't waste energy on it.

Later levels have loads of blackouts so carry a torch or two. Howater will let you down when you need it most. Magic Items (eg Lorchelm, Harp of Healing, Soulsword etc) all have a limited number of charges and when 'used' by a character often summon powerful characters to join the party. Pet favourites are Greater Demons and the Old Man, both of which can wipe out whole groups at a time. Wipe out Dragons and Demons first – it is very easy for them to wipe out an entire party very easily. When smoke gets in your eyes strike another light. Always look for traps and use a magic compass.

TYPE-INS

Programs packing more punch than Mike Tyson

Pull down menus

And now - a pull down menu system for the 6128! With a few alterations (notably the use of COPYCHR\$: an RSX was printed in AA22) it works on the 464 as well.

Lines 10-630 are simply a demo program, whereas 10000 onwards

is the actual menu system.

Marcus Williams of Birmingham wrote this program - big, but very useful (the program, that is, not - as far as we know - the author!).

```

About Input Output Toolbox Options Exit

QUIT MENU
Catalog
Erase File
Change Drive
Change User Number

Calling all 464 owners!

If you don't have AA22 to hand, here's a quick summary.

The first thing to do is to insert these lines:

```
10015 RESTORE 10017:FOR t=&BF00 TO &BF06:READ
a$:POKE t,VAL("&"&a$):NEXT
10017 DATA cd,60,bb,32,07,bf,c9
10880 LOCATE x,y:CALL &BF00:un$=STR$(PEEK(&BF07))
:PRINT CHR$(211)
11700 LOCATE q,t:CALL &BF00:a$=a$+STR$(&BF07)
```

Next, alter lines 10880 and 11700 as follows:

```
10880 LOCATE x,y:CALL &BF00:un$=STR$(PEEK(&BF07))
:PRINT CHR$(211)
11700 LOCATE q,t:CALL &BF00:a$=a$+STR$(&BF07)
```

Now it's your turn. Lines 11110-11250 contain some commands with extra parameters. In general the third parameter is the temporary graphic ink colour, and the fourth is the printing mode.

A similar effect can be obtained with PRINT CHR\$(23); CHR\$(x), where x ranges from 0 to 3 - 0=NORMAL, 1=XOR, 2=AND, 3=OR.

Good luck!

```

Here, have some money!

Send us your listings and not only do you stand a very good chance of getting in print in your favourite magazine, you could also earn yourself £100. Every Type-In we publish is paid for, and £10 is the absolute minimum. So what are you waiting for? Send your tape or disk - and a printout if you can - to **Type-Ins, Amstrad Action, Future Publishing Ltd, 4 Queen St, Bath, BA1 1EJ**. And here's a few tips you may find useful:

- Send only your own original unpublished work;
- Use lower-case, not capitals, for variable names;
- REM statements make the

program easier to understand;

- Don't use letters that look like numbers as variable names (O and 0, for instance, or l and 1);
 - Avoid lengthy multi-statements. Short lines aid debugging;
 - And ensure your name and address are on every piece of paper, cassette and disk you send.
 - If you'd like to reach an even larger audience, declare that you are putting your contribution into the Public Domain.
- Oh, and one final thing. Good luck!

Program Notes

Line 10010 sets up the machine code routines as well as the user defined graphics and similar bits and pieces. It needs to be called at the beginning of the program - as should line 10160, which creates the menus. Needs the number of menus in no%, and the data statements for the menus, as lines 100-150. Line 10330 pulls down menu meleno% at x coord in x1. The screen is retained during this operation. Line 10420 moves the bar up and down the menu, and is controlled both by the cursor keys and space, as well as the joystick. Option selected is returned in oopt%. NB QUIT MENU option = option one.

Line 10620 displays a version box at coord in x (y position is fixed). This can be altered as desired. Line 10700 needs to be supplied with the options that are defaulted to (ticked) when the program first runs, and when a new option is selected. Line 10810 displays the copyright and Drive no. messages at Y coord. This routine needs the address changing to work on a 464. Line 10830 is the notepad routine. Again a few alterations are needed for Amstrad 464's.

```

Program Notes

Not much to this. Line 10 sets up the border and ink colours. Lines 20-30 perform the actual drawing of the pattern, and lines 40-60 perform some decision making on the pattern. Finally, line 70 loops to line 20 to draw the next bit of the pattern.

Memkit

Mark Baldwin has hacked out a program to help out all you hackers in your hacking. It adds six new RSX's to Basic, and should help out when you're looking around memory, because it's much better than using PEEK and POKE.

These new commands consist of:

- |MDUMP, address, lines, rom
- Dumps the contents of RAM or a ROM to the screen from the given address.

The **lines** parameter is the number of lines to dump and must be in the range 0-255. (0 is treated as 255.) The upper **rom** number can be included.

● |MTYPE, address

Similar to |MDUMP: prints memory contents in Ascii format. Press any key to stop the dump.

● |MFILL, address, length, byte

Fills the contents of memory from the given **address** with the **byte** value. The length must be from 0-65535.

● |EMOVE, source, destination, length

Moves a block of code. The **source** is the start address, the **destination** is the target address and the **length** is the size of the block in bytes.

● |DOKE, address, integer

Places a 16 bit integer value in the the given **address**. Can handle values from 0-65535, and pokes them in low byte first, then high byte.

● |DEEK, address, @variable

reads a 16 bit value into an **integer** variable from the **address**. Declare the variable before you use the command!

```

Program Notes

This is a standard RSX loader. Line 10 reserves memory and then starts a looping procedure. Lines 20-50 continue this loop, with line 40 checking each line against the checksum at the end. Line 50 calls the machine code and clears the machine using NEW. The machine code DATA statements run from 60-250.

AA Buyers Guide

Part one:

Word processors, databases and spreadsheets

Databases

AtLast Plus

Rational Solutions **056681 511**
£39.95 • CPM+, 6128 only

• reviewed AA30

Powerful database that has developed into what users require. Data capacity is restricted only by disk size, and splitting fields into smaller pieces (elements) is supported. Printed output is impressive. Unfortunately calculations on fields is missing. Strongly recommended for sheer processing ability.

ATLAST PLUS

DATABASE PROGRAM FOR AMSTRAD PCW512, PCW512B,
 PCW512 AND CPCV728.

What they said about the ATLAST:
 Searchable indexes and fast recall. Subroutines
 available in the menu system.
 Mathematical functions, word processing features all
 particularly valuable.

to tie records together, saving space and time. Screen layouts and reports are menu selected and not for the faint-hearted, but results are good. Only field totals can be records, other calculations being unsupported.

Random Access Database

Minerva Systems **0392 37756**
£29.95 disk only • reviewed AA6

Very good mathematical and string operations make this a database to watch for. Random disk accessing gives speed combined with power – and you can opt for a 40 or 80 column screen. Can be a little unresponsive to keys.

Ultrabase

Beebugsoft **0727 40303**
£14.95 tape, £17.95 disk

• reviewed AA6

Keeps all data in memory, giving fast search and sort options but reduced capacity. Record format is fixed, making entry a little tiresome. Excellent price for a database, though, and featuring 'fuzzy logic' search option.

Masterfile III

Campbell systems **0378 77762**
£39.95 CPM+

• reviewed AA30

Possesses a genuinely useful feature – parent/child records, which enable you

Even so, Pendown lacks many features, and one day you're going to want to move up.

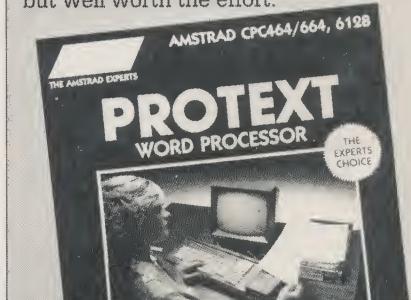

Protext

Arnor **0733 239011**
£19.95 tape, £26.95 disk, £39.95 ROM

• reviewed AA3

One of the first word-processors written especially for the Amstrad. Protext is lightning fast at all tasks involving the screen. True merging from separate files and disks to the cursor position is very easy, and the program supports standard CPC RSX's like DISC, TAPE, CAT etc.

Having software on ROM available at the touch of a key is excellent. Bad points: maximum file space is limited to machine memory – about 22K on disk and 38K for the ROM version. And a little daunting to get to grips with: but well worth the effort.

Word processors

Brunword 6128

Brunning Software **0245 252854**
£16.50 tape, £25 disk • reviewed AA24
 40 or 80 column mode; in-built spell checker loaded into extra memory. Can be used by expanded 128K machines. Superscript and subscript effects appear on-screen.

Some on-screen operations such as centering and cursor movement can be a little slow. And files cannot be loaded into other word-processors.

NewWord

Newstar **0277 229509**
£69.95 CPM+ • reviewed AA7
 Similar to Wordstar in many respects, and the two can swap documents. It is so big that two disk drives are needed to make the most of it. Again the manual is huge.

One of the more desirable features (and there are an awful lot of those) is the ability of the program to display printer font styles on screen. So you can tell just where you have left them on accidentally.

On the other side of the coin, this is just about the most expensive word-processor for the Amstrad. Packed with features, it runs at the same rather sluggish speed as Wordstar.

Pendown

Logotron, **£19.50 disk only**

• reviewed AA18

Pendown offers a complete tutorial in the theory and practice of the subject. It is a very open system, owing a lot to expensive DTP packages. Generally more people learn about the subject by means of Tasword: but Pendown is a lot more fun. Built into the product are different fonts to print with. You can't see them on screen but they make the end result much better.

Pyraword

Discovery **0742 753423**
£14.95 tape, £17.95 disk

• reviewed AA18

This program is similar in use to Pyradev, also from Discovery. When starting up it loads a profile of inks, printer codes and the character set. Word counting, changing disk drives etc – the housekeeping tasks of any program – are handily located. The program uses the extra memory of 128K machines for spooling printed documents and storing text.

Unfortunately true merging of files is not possible, and the control keys are a little strange at first. The margins cannot be set further apart than 80 columns, although placing a printer control character at the right hand side will allow wider documents to be printed.

Tasword

Tasman Software 0532 4388301
464, 464D, 6128, £19.95 tape, £24.95 disk

● reviewed AA1

A veritable herd of different releases. 464 is the tape based version, exactly the same as Amsword. 464D has a few enhancements for a disk drive. 6128 makes full use of a 6128's extra memory. The latter pair include a mailmerge facility as standard. If you are new to word-processing then this is worth a look. It is very easy to get to grips with and comprehensive help screens are available when needed.

Many people never find a need to change from *Tasword*. But the screen operations are fairly slow, and reformatting text is done one word at a time. If you want speed, look elsewhere.

Wordstar

Microp/Cumana 0483 571666
£49.95 disk only (CPM) ● reviewed AA1
'Pocket Wordstar' is what this really is. But anyone who has seen an incarnation of the real thing on a CPC can tell you it's a dinosaur. Be glad the faster *Pocket* version is available. One good feature: files can be as big as the space available.

A fully professional program, *Wordstar* has a manual bigger than some printers and a layout reminiscent of mission control. If you want a function, it is in there... somewhere. Not fast.

Mini Office II

Database Software 0625 879940
£14.95 tape, £19.95 disk ● reviewed AA6
If you don't need full specification *Mini Office II* is the one to buy. For what is a remarkably low price you get a word-pro-

cessor, database and a spreadsheet, plus other goodies such as comms software. Packaging and documentation good, and programs work in a menu environment. Worth considering if you're short of pennies (and who isn't?).

Spreadsheets

Cracker

Newstar Software 0277 229509
£49.95 disk CPM+ ● reviewed AA9
Spreadsheets must be created from scratch. Documentation well written; command sequences are soon learned. Mathematical functions very well catered for, and include random numbers. Files limited to 17K long - you soon run out of space, and formulae programming is not well implemented.

The Cracker user's manual

Mastercalc 128

Campbell Systems 0378 77762
£33 disk, 128K machines
● reviewed AA4
Can display two different parts of a

spreadsheet at the same time. Includes notepad and calculator. Easy to use, but the mathematical formulae can only consist of the four basic arithmetic options. It slows down as more data is entered.

Matrix

Audiogenic Software 0734 303663
£34.95 disk ● reviewed AA18
Uses disk to store data - hence good capacity but poor speed. Graphic options on *Matrix* shame other spreadsheets. On screen prompts are rare, making it hard going at first. Calculating power good.

Supercalc 2

Amsoft/Sorcim 0277 230222
£49.95 CPM+ ● reviewed AA4
Originally this program cost £200, but was soon cut. Documentation is first class. Calculations can be determinative, - they will be performed on whether or not a cell's contents match a given value. Help prompts plentiful if needed and arithmetic functions excellent.

AA Buyers Guide

HEY!
Buy any game on this page for £6.95 on tape or £11.95 on disk.
(See next page for Order Codes)

Your CPC is alive. To make sure it's kicking subscribe to Amstrad Action. Now!

What's really going on in the CPC world? How do you know if you're really getting the most out of your CPC? How do you get hold of the best bargains? Get all the best advice, plus tactics and games hints, pokes and help which adds new life to your existing software collection and lets you make your future choices wisely: news, features, comms, the letters pages (!) - all this by subscribing to *Amstrad Action*.

For just £16.50 you'll get the next 12 issues delivered straight from the presses to your door. And in every one of them the chance to pick up bargains you'll never see repeated elsewhere.

But that's not all. To make sure you get a proper AA kick-off we're giving away one of these four US Gold games - your copy will arrive two days after your subscription order. **But there's more!** In a moment of pure folly we're throwing in a copy of Firebird's *Enlightenment* to those who choose tape rather than disk! In other words, subscribe, pick a game from the four listed below. If you want it on tape, you get *Enlightenment* thrown in free! We can't do more than that for you. But you have to want that machine to come alive. Contact us on (0458) 74011 or fill in the order form on the next page.

Do it now!

BIONIC COMMANDOS

Firebird's ENLIGHTENMENT

(Druid II) - just £3.95 (RRP
£8.95)

**Just £3.95 -
only through
*Amstrad
Action!***

ENLIGHTENMENT, the game which subscribers get free of charge when they choose a tape rather than a disk game, is now available to all **Amstrad Action** readers for just £3.95. It's a Firebird game which was released in April of this year with the full title of *Enlightenment Druid II*. Complete with 22 page manual/initiation booklet, *Druid II* follows the quest for magical powers in the context of an icon-driven adventure which won praise from both adventurers and those more used to arcade action.

Definately a long-term project which will challenge your wisdom!

HACKERS HANDBOOK III

by Hugo Cornwall
£6.95 • Century Hutchinson

Here it is! The Know-All book about hacking - the art of exploring other people's computer systems - that will shock you with its frankness. When *The Hackers Handbook* first appeared in 1985 it caused a storm of interest and went straight into the best-seller lists because it revealed so much about the way computer systems across the world operate. This updated edition shows that as computers emerge further into mainstream life, the aspect of computer security has been thrust into the foreground of political, legal, military and business life.

Hackers Handbook III looks at modems, Prestel-type information systems and networks. It discusses some of the most famous incidents of the last ten years, from the Prince Phillip mailbox hack of 1984 to the millions of pounds that are lost by the banks and building societies annually. All together, a fabbo read which will get your brain twitching frantically!

Order Code AA343

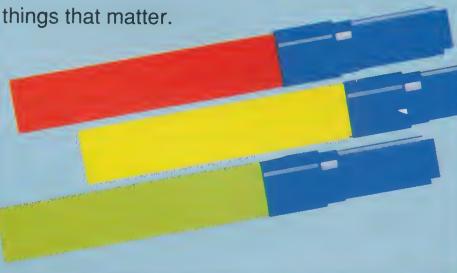

HIGHLIGHTER PENS

Three for £1.50

Anyone who uses computers a lot, can make use of highlighter pens. For marking the important lines in a document or printout or program listing. For ensuring a key sentence in a manual isn't forgotten. Or just for highlighting the main points in an Amstrad Action article.

We're offering a set of three different-coloured AA-stamped pens in a clear plastic wallet for just £1.50. They're high-quality and long-lasting. A good way of focussing attention on things that matter.

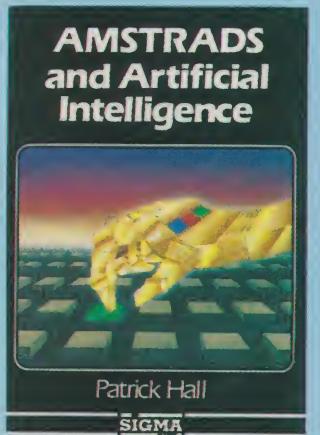

A VERY SPECIAL OFFER!

Amstrads and Artificial Intelligence by Patrick Hall Just £1.95 (RRP £8.95!)

Published by Sigma Press, this book looks in detail at one of the most talked-about topics of our generation - artificial intelligence. Is it really possible to build a computer program that comes anywhere near the capabilities of the human brain?

Amstrads and Artificial Intelligence isn't a philosophy book though - it's a book that discusses the requirements of AI AND offers several program listings that allow you to start tackling the issues at the practical level. Didn't think you could get AI on your CPC? Well think again - then buy this book. Topics include expert systems, computer vision, robots and learning, game playing and knowledge representation. All this for just £1.95 - saving SEVEN POUNDS on the original price! An excellent book for anyone who owns a CPC and wants to take it further than ever before.

Order Code A895

HOW TO ORDER

Just use the order form on the left hand page. Use the order numbers listed with the product, OR, for a subscription, look at the Subscriber Code box next to the Order Form.

Otherwise telephone us with your credit card details on 0458 74192 (24-hour answerphone).

ATLAST PLUS

CP/M database program for the CPC6128 for just £29.95 (RRP £39.95)

"Superb value for money and hard to pick holes in" we called the first version of *AtLast*. Now, with the release of *AtLast Plus* by Rational Solutions, you have the chance of buying one of the best (and probably the best for the 6128) databases for £29 - £10 less than the full retail price!

AtLast Plus runs under CP/M, and features include up to 32,000 records, ten files per database, 20 fields per record, 99 elements per field and up to 79 characters per element. User-definable report and screen layouts, full on-screen control of data entry, impressive indexing/sorting facilities and automatic data re-organisation are all included in this latest version. As well as this, unused data space is not saved to disk marking out *AtLast Plus* as an essential database for serious 6128 owners.

The package includes disk and full 120 page manual - altogether one of the most suitable programs for organising club-type membership lists, and unbeatable value for money - only through *Amstrad Action*.

SPECIAL
OFFERS

BACK ISSUES

Expand your Amstrad Action collection!

If you're one of the thousands of readers who've joined *Amstrad Action* only recently, you'll want to catch up on some of the good things you've missed. Here's how to do it. We have limited numbers of the back issues listed below, which we're selling at cover price with post and packing free.

Issues 8 and 16 may be of particular interest, as both include free cassettes packed with good software. Two series also went down very well. Andy Wilton's programming course in Basic for absolute beginners ran from issues 8-17, while a series of articles on the CP/M operating system ran from 10-17.

All issues contain numerous game reviews, Type-Ins and Pokes, all making up the best in *Amstrad Action* past and present.

ISSUES 1-6 SOLD OUT!

ISSUE 7 • £1.00 • Educational software reviewed. Tips on *Elite*.

ISSUE 8 • SOLD OUT!

ISSUE 9 • £1.00 • Four-page playing guide to *Batman*. Printer reviews.

ISSUE 10 • SOLD OUT!

ISSUE 11 • £1.00 • Pokes for *Batman*, *Bounder*, *The Covenant*, *Tau Ceti*.

ISSUE 12 • £1.00 • Big disc drives, *Starstrike II*, Programming Pascal.

ISSUE 13 • £1.00 • 7-page music special, *Knight Tyme* playing guide.

ISSUE 14 • £1.00 • Art Studio review, maps of *Dan Dare*, *Price of Magik*.

ISSUE 15 • SOLD OUT!

ISSUE 16 • £1.50 • COVER CASSETTE containing free level of *Druid*, plus utilities.

ISSUE 17 • £1.00 • *Pagemaker* review. *Red Boxes* review. Numerous Type-ins.

ISSUE 18 • SOLD OUT!

ISSUE 19 • £1.00 • Cheat Mode special. ROMs and EPROMs.

ISSUE 20 • £1.00 • Survey of ingenious gadgets and add-ons.

ISSUE 21 • £1.25 • Type-ins special including *Card Trick* program.

ISSUE 22 • SOLD OUT!

ISSUE 23 • £1.25 • Launch of Word-Processing series. Utility Type-ins.

ISSUE 24 • SOLD OUT!

ISSUE 25 • £1.25 • Create your own Trivia quiz program. *RODOS* reviewed.

ISSUE 26 • £1.25 • Special on Midi music interface.

ISSUE 27 • £1.25 • Midi and Teletext. Build an RS232. Red L.E.D.

ISSUE 28 • SOLD OUT!

ISSUE 29 • £1.25 • Six top printers reviewed. Spreadsheets.

ISSUE 30 • £1.25 • Discovering databases. How to upgrade a 464 to a 6128.

ISSUE 31 • £1.25 • CP/M software section starts. Basic programming reaches part five.

ISSUE 32 • £1.25 • Educational software survey. CP/M on ROM. Word processing.

ISSUE 33 • £1.25 • Loads of hardware projects! - joystick, splitter, I/O port etc.

Comms.

ISSUE 34 • £1.25 • Simulation software from space shuttles to bikes. Small business?

ISSUE 35 • £1.25 • Joy of hacking scrutinised! Buyers guide to computer books.

ISSUE 36 • £1.25 • Micronet - worth it? Code Masters? Printer selection.

ISSUE 37 • £1.25 • 3rd birthday cover tape includes *Dizzy D & Der's get Heroes of the Lance*.

AA DUST COVERS

2-piece set only £6.95

Let's face it, computers don't like dust. Over a period of time it can make them very ill indeed: disk drives and cassette decks in particular can suffer serious, sometimes fatal damage.

A set of dust covers provides a neat solution. And there's the added bonus of smartening up the hardware's appearance when it's not in use.

The specially-commissioned *Amstrad Action* covers are made from high-quality, water (and coffee) proof PVC. They're coloured a gentle beige with smart blue trimming and matching AA logo.

You can order a 2-piece set tailor-made for your CPC system – just choose the correct order code from the list next to the order form.

A Foul Move

BECOME THE WORLD CHAMPION – BY FAIR MEANS OR FOUL

A realistic boxing simulation. You can even cheat... if the ref's not looking!

You're behind on points and time is running out. The ref looks half asleep. A quick head butt and a sly punch below the belt and your opponent is toppling over. But as he falls, his knee strikes you a paralysing blow. "Foul" shouts the crowd, and your opponent is disqualified.

You've won, but in the next championship contest you meet a boxer who knows more dirty tricks than you. It needs skill and cunning, lightning responses and deadly strategy. Have you got what it takes to become the World Champion – By Fair Means or Foul?

39 ACTION TEST BEGINS WITH THE EMPIRE STRIKES BACK

The second of the *Star Wars* trilogy provides the opening to this month's action-packed bumper instalment of CPC activity.

40 GAME OVER II

Dinamic proudly present the sequel to... that's right, *Game Over!* They've had second thoughts about the dubious advertising, however - and decided to use it a

No business like show business...

So that was the 1988 PC Show. We've a special report in *Amscene*, with photos and details of the most important new games releases coming up for the Christmas rush.

And then there was Amstrad's new machine - 'The Sinclair Professional Series PC200' (bit of a mouthful, huh?). You'll find the details inside, but in short it's a low-cost PC compatible that's going to be sold (or not, as the case may be) on the claim that, 'It's both a games machine and a serious machine'.

Ring a bell? Yes of course it does! It's the CPC story, all over again. The image we're to form in our supposedly gullible minds is of the computer that gets its joystick wagged all day and its keypad bashed all night, as junior gives way to parent home from a busy day at the office.

But hang on a minute: is it really a games machine? Four colours? Hopelessly inadequate sound? It seems to us that anyone who's serious about games knows already that the low end of the PC range isn't the place to go for a good waggle.

So the verdict on Sugar's latest enterprise must remain, at least for the time being, 'Not proven'.

Steve

43 THE TRAIN

Accolade steam in with a wartime simulation cum shoot-em-up that chugs along at a fair old rate.

44 ALSO IN ACTION TEST THIS MONTH:

Vindicator, GM Chess, Gold Silver and Bronze, Metaplex, Roadblasters, Thing and Vectorball.

68 PILGRIM

The caped crusader lays down his staff for another instalment in the annals of AA adventuring. Two big releases this month: Level 9's *Ingrid's Back* and *Lancelot*.

AMSCENE

PC Show 88 special – including the new PC200!

Amstrad launch new range

Amstrad have launched a new range of 'games/business' machines, the 'Sinclair Professional series PC200'.

The news came at a press conference immediately prior to the PC Show, held at Earls Court last month. The Show was the press and the public's first opportunity to see the range in the plastic, as it were. (A piece had already broken off the model your correspondent saw on the morning of the first day of the show – before the public had even been admitted!)

The selling pitch is that 'it gives you the best of both worlds – IBM-PC compatibility unlike any other home computer and an edge for games you won't find on any other PC, thanks to the built-in colour TV interface'. The generally low-key announcement of the machine at the Amstrad press conference, however, and its lukewarm reception by the gathered pundits and industry commentators, suggests that it is not the world-beater Amstrad must have been aiming for. And the launch of the machine as a Sinclair may further weaken its impact, for the title – bought lock, stock and barrel from Sir Clive – still conjures images of the wretched C5 and the like.

Spec/tackle

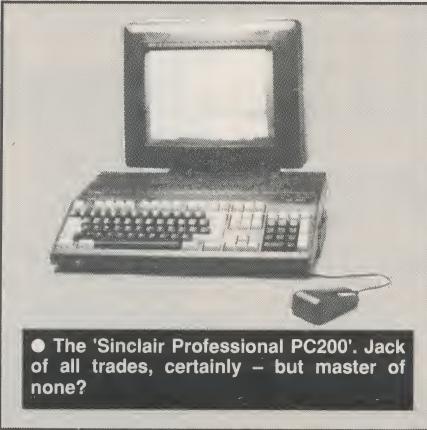

For the technically minded, here's what you get:

- 512K RAM
- CGA graphics,
- built-in modulator for use with TV,
- AT type keyboard,
- single 3.5 inch disk drive,
- expansion socket for 5.25 inch or 3.5 inch floppy disk drive,
- joystick port.

The machine comes with a mouse, Microsoft MS-DOS (a disk operating system very similar to, but not compatible with, CP/M), GWBASIC, GEM-3 (a disk handling suite) and GEMPaint (a graphics drawing system).

PC200 price list

without monitor	£343
with mono monitor	£458
with colour monitor	£573
– all three prices include VAT	

The Amstrad sales pitch attempts to present the PC200 as both a games machine and a serious machine (now where have we heard that before?). First impressions, however, are of something that is neither. Its four colours and poor sound ('beep') are what prevented the PC from ever being a world-beating games machine, while its decidedly modest processing power will not appeal to many business users out shopping for a 'serious' computer.

On the other hand, there is a huge library of PC software – the biggest of any machine ever – and the 3.5 disk format is set fair to become the industry standard for both games and serious software. And since it's often the breadwinner of the household who actually forks out the readies for a computer, a machine that can run PC software may be attractive.

One of the cleverest features of the PC200 is its expandability. The lack of expansion slots on the Amstrad PPC – a 'portable' ('luggable' would be more accurate) PC – have seriously hampered its success, and Amstrad have avoided repeating that mistake. The new machine features two easily accessible PC-standard slots for such things as a 20Mb hard card and 64 colour Enhanced Graphics Adaptor. (The only problem is that fitting full-length cards prevents you from closing the 'door'!).

The machine is expected to be available immediately – exclusively through Comet. It is believed this is the first time Amstrad has gone in for such a peculiar

New CPC launch

The announcement was made at the PC Show of the 'Amstrad Entertainment Centre'. The package, as predicted in AA36, consists of either 464 or 6128, colour monitor and TV tuner, clock radio, joystick, 17 games (*Monopoly*, *Scalextric*, *Cluedo*, *Trivial Pursuit* and *Scrabble* appear to be the pick of the bunch) and 'work station'. Billed as the 'ideal Christmas present' – unless you've already got a CPC, which you have – it's expected to retail at £399, a saving, in a round-about way, of £50. Whether the individual items – modulator, clock radio and 'work station' – will be available separately had not at time of writing been revealed.

arrangement, and may be an indication that this is principally a Christmas machine. How it does after that is anyone's guess.

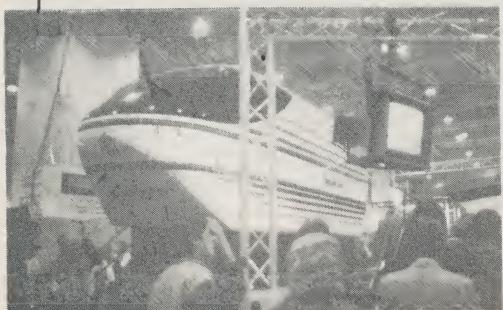

So the big question, of course, is: where does this leave the CPC? Superficially the machine looks to be the successor to both the 6128 and the PC compatible 1512, but since Sugar has already indicated that he has no intentions of dropping the latter it can be assumed he feels the same way towards the CPC. 'So long as people buy it', he has said, 'I'll sell it'.

One industry commentator who has seen it all before described the 200 as 'a turkey', and added wryly: 'Perhaps it'll sell at Christmas, then'.

PC Show '88

The 1988 Personal Computer Show, held for the first time at vast Earls Court, attracted huge crowds, most of them apparently having sharpened their elbows and bought toe-crushing boots especially for the occasion.

Some statistics: display space: 12,000 square metres (that's 50% bigger than last year); attendance, about 100,000 (up on last year's 73,000). Each visitor is believed, on average, to have acquired 79 pieces of paper, 64 plastic carrier bags and eight bruises of varying degrees of intensity.

It was, shall we say, a little busy on Friday, Saturday and Sunday the 16th-18th September. The tube disgorged crowds at approximately two minute intervals, and the harassed security staff shouted themselves hoarse just trying to herd people towards the appropriate doors, and away from the despairing clutch of the 'Junior Fashion Show'. It is estimated that 3,500 fashion-conscious teenagers found themselves playing Savage rather than finding out about the latest in partywear. What happened to the computer buffs who ended up in the wrong exhibition is, alas, not known...

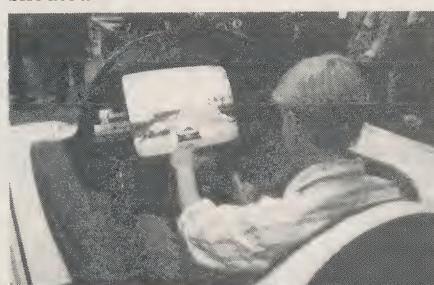

Display of wealth

Once inside, people were bombarded with a barrage of light and sound from the increasingly over-the-top games stands. Microprose had their 'multipassenger simula-

tor Super X' in operation, and the queues never subsided. (The trip, by the way, was good – but not that good. The screen itself, onto which was projected film of hang-gliding, motor-cycling, big dipping and aeroplane flying, was of surprisingly poor quality, though the bounciness of the journey partially made up for it.)

There were the usual enormous displays of wealth from the likes of US Gold, Mirrorsoft, Telecomsoft, Pepsi Cola (*Pepsi Cola?*), and the rest.

However it was Domark, whose appearance at the Show was apparently a late decision, who coolly upstaged everyone with a double-decker bus driven by a grotesquely over-inflated Rambo, complete with knots of blue veins and a bust that would put most of the girls on the US Gold stand to shame. Even better, they had a personal appearance from Her Majesty Dame Mrs Margaret Hilda Thatcher Herself, whose quiet understatement and gentle encouragement was a lesson to us all.

Absent friends

Electronic Arts and MediaGenic, however, chose not to grace the Show with their public presence at all, and there were mutterings in various quarters that the whole thing was getting 'too big for its boots'. The business/serious – games/leisure split was as marked as ever, and it seems likely that the two must eventually go their separate ways.

As far as Amstrad was concerned this was a high-profile show, with launches of big new business machines and the PC200 (see elsewhere in

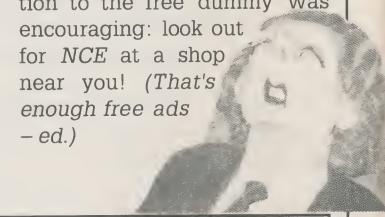

AmScene). Their stand was fun to watch, as dozens of puzzled punters tapped a few keys on the PC200 and wondered what a Sinclair machine was doing on the Amstrad stand (Amstrad bought Sir Clive out a couple of years ago). Reaction ranged from 'Looks like an Atari, pity about the screen', to 'Why the fuss?' and even, from one world-weary youngster, 'Sugar's flipped. It'll never sell'. Others, however, were more generous, and could be seen shrewdly

calculating Christmas present estimates.

And of course Amstrad Action was there in force, signing autographs, posing for photographs and fighting off the screaming hordes (after blood – ed). We enjoyed meeting so many readers, and perhaps even helping one or two of you. Thanks for all the suggestions, though one or two of them would seem to be physically impossible. If your idea is incorporated into the mag before too long, thanks!

Future Publishing also took the opportunity to promote the latest addition to its stable, *New Computer Express*. Reaction to the free 'dummy' was encouraging: look out for *NCE* at a shop near you! (That's enough free ads – ed.)

Level 9 bury £5,000!

The quest is back on for the Holy Grail, it was revealed at the Show. Yes, like you we thought all that business had been sorted out long ago – but apparently not.

The search for the £5,000 replica of the mug that gave Arthur and the boys such a hard time back in *The Old Days* is a publicity stunt – and a good one at that – to publicise the release of *Lancelot*, Level 9's adventure game out now on the Mandarin label. The item in question is seven inches tall, hand crafted from solid sterling silver and gilded inside with 22 carat gold and encrusted with amethysts, garnets and opals. And instead of nipping round to the nearest jewellers to cash in, 'Sir' Pete Austin and the other Level 9'ers have BURIED IT!

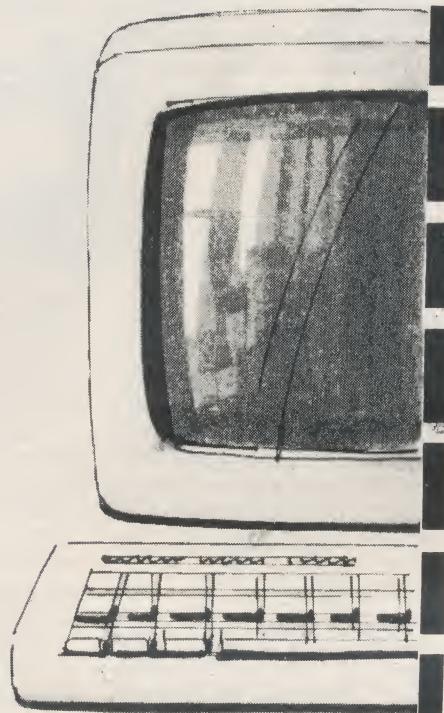

Four preliminary clues,

available on a special telephone hotline, reveal 'possible (but not actual) locations for the hidden treasure'. What use a 'possible (but not actual)' location is to anyone, we hear you ask? Well, the first 36 contestants to guess these locations correctly are to receive a second set of clues which will ultimately lead to the Grail's true place of rest.

● We feature a full review of *Lancelot* in this month's packed *Pilgrim*, which also reviews Level 9's other big release of the moment, *Ingrid's Back*.

When you buy a whole new Amstrad system, why use only half of it's potential?

A Message from Amstrad's Chairman

Dear Amstrad Computer User,

You don't need me to remind you that you have selected the best computer in its price range. Numerous journalists from the specialist press have now contributed to the opinion that Amstrad computers represent the best all-round machine you can buy.

One of the many reasons why computer journalists have received our products so enthusiastically is undoubtedly our careful attention to providing information on the system and its software.

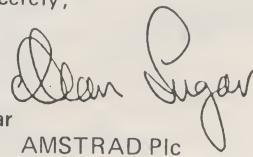

You can be a part of Amstrad's ongoing effort to inform and help users by taking advantage of this opportunity

1. 12 Issues of the Official Amstrad Magazine.
2. FREE access to our superb CPC Technical Support Service.
3. Discounted Software . . . best prices in the U.K!
4. Monthly Amda CPC Newsletter.
5. 24hr Ordering Service.
6. Welcome Pack.
7. Introductory Gift if you join TODAY! (worth between £3 - £7)

to join the User Club. Catering only for the Amstrad computer user, this specialist support club was initially formed by Amstrad solely for the purpose of assisting you with all your computer needs.

There are many immediate and direct benefits available, so don't delay before filling out the application form below and sending it back to Amsoft.

Yours sincerely,

Alan Sugar

THE OFFICIAL AMSTRAD USER CLUB

Bits & CPC's

- Microlink, the electronic mail system people, have announced that its subscribers can now communicate directly with the world's fax users - 200,000 of them in the UK alone.
- Electronic Arts have clinched deals to distribute for both the French Ubi Soft, of *Asphalt* fame, and the Spanish Dinamic, of *Game Over* and *Army Moves* renown (*Game Over II* is reviewed in this month's *Action Test*).
- Good luck to new venture 'Software Circus', which claims to be Britain's 'first speciality store selling only computer software' and which opened at the end of September in Oxford St. Over 500 titles are available.
- A Mr William Bailey has had the clever idea of establishing The Adventure Writer's Companion. The idea is to offer hints, advice and critical reviews to those people who've written adventures - whether GAC'ed, PAW'ed or in their own language. Reviews could be published in a newsletter and the word spread that a good adventure was available. Interested? Write (no adventures yet!) to: William Bailey (TAWC), 4 Worcester Rd, Hatfield, Herts AL10 0DX.

Hackers to be outlawed?

Legal moves are afoot to make computer hacking a crime.

At present you're not breaking the law if you bust into someone's computer security unless you actually commit damage such as fraud or sabotage.

The plan - and at the moment it's no more than that - is revealed in a paper for discussion published by the Law Commission, and would bring Britain into line with the United States, Canada, Sweden and France, where hacking is already specifically outlawed.

- Superior Software, who've concentrated until now on the BBC, have taken over Alligata ('software with bite' - geddit?), who did *Who Dares Wins II*.

First fruit of the union is *By Fair Means or Foul*, reviewed this month in *Action Test* and notable for allowing you to cheat with head butts, groin punches and kicks - so long as the referee doesn't catch you!

The Show goes on!

Recovered from the PC Show yet? Good, because you're just in time for the next one!

The Amstrad Computer Show returns to Manchester - to be precise, the G-Mex Centre, on October 21-23. Michael Meakin, head of the Database Exhibitions, which is organising the show, claims that with all the new features and the 70 companies exhibiting, 'This will be the most exciting computer show ever held in Manchester'. Exhibitors include Arnor, Brunning Soft-

ware, Database Publications, Goldmark and HSV, among many others. Siren Software will have *Micro-Design Extra*, 350K's of extra fonts and clip art costing £12.99. They'll also have a range of 3.5 inch CPC disk drives, offering 800K capacity per disk at £124.99.

Gimmicks promised include 'Amstrad Street', as well as the 'Amstrad Arms' and the 'Amstrad Office' (the possibilities are endless). Of more interest to CPC users

may be the 'Amstrad Advice Stand', manned (personned?) by specialists - including CPC boffins. There is also to be a 100-seat theatre, the setting for Question and Answer sessions with top experts and a 'Meet the Editors Forum' (Steve Carey's invitation is presumably still in the post...).

The Amstrad User Club will be on hand, and some surprises are promised: 'Wait and see', threatens Christine Lees, Database Exhibitions

operations director: 'We don't want to give too much away too soon' - a remark that can be interpreted in more ways than one...

The Show is also an opportunity for those who missed the Earl's Court bash to get hands-on experience of the PC200, and should prove a worthwhile expedition if you are thinking of splashing out in the near future.

After all, Christmas is just around the corner (what an appalling thought...)!

As ever, the PC Show provided the ideal opportunity for a whole host of releases, previews, demo's and promises (these last to be taken with a substantial dose of salt!). Here's just some of what's coming soon...

- Activision have just signed a three year worldwide deal for software rights to Games Workshop - well known for their roleplaying and board games. First fruits are *Warhammer Fantasy Battle* and *Warhammer 40,000*. Magic and monsters feature heavily in the *Warhammer Fantasy Battle* and the far future is the setting for *Warhammer 40K*.
- All three divisions of Telecomsoft have something heading your way in the coming months. Firebird

are to release *Savage*, which stars a homicidal axe wielding maniac on a quest to save his friends from a dank and

Games news

gloomy dungeon. Monsters must be bashed and objects collected as you run around the dungeon. It's due out November 2nd at £9.99 and £14.99 on tape and disk respectively.

Rainbird's contribution, *Fish!* is an adventure from Magnetic Scrolls, the people who brought you *The Pawn* and *Guild of Thieves*. You play the part of a goldfish (yes, honestly) out to save the world. It'll have the usual excellent graphics and will set you back £19.99 (disk only). No release date has been fixed yet.

A quintet of games from the Silverbird budget label are also heading your way: *Skateboard Joust*, *Hopper Copper*, *Classic Dogfight*, *Scuba Kidz* and *Turbo Boat Simulator*. All cost £1.99 on tape.

- A fast moving 3D shoot-'em-up with highly detailed graphics is being converted to the CPC. *Afterburner* is the arcade game in question and it's gonna take

some doing to get it running fast enough on a home computer: a 3 Meg. arcade game is getting squeezed into 64K pot! The release date is set for January.

- SDI should be on the streets by the time you read this. Nuclear war has begun and you have to stop the destructive missiles landing on your poor defenceless population.

R-type is another arcade action scrolling shoot-'em-up due very soon. Loads of different weapons can be strapped onto your ship as you zoom around killing everything in sight.

Finally there's *Time Scanner*, a pinball variant to keep you hitting the flippers. There are four stages to go through, each linked by a time tunnel. To gain entry to the tunnel you need some sharp pinball skills. January is when it's due. All four games cost £9.99 on tape and £14.99 on disk.

REACTION

Your letters, gratuitously headlined in tabloid style

Cassette scandal

As you can see, I'm returning the (almost) free cover cassette from AA37 as *Dizzy* totally fails to load.

Apart from duff 'free' gifts I think AA is excellent - I get it every month and read it from cover to cover. Keep up the good work!

**Peter Nunn,
Welshpool**

We are very sorry indeed to hear your cassette won't load, Peter, and we will of course send you a replacement pronto. We've had a few similar complaints, and if yours was one of them we extend the same sincere apology and promise to replace your tape.

What can we say? We issued almost 50,000 tapes, and if even one in a thousand fails, that still means disappointment for 50 of you. Turn to page 33 and Problem Attic for more details.

Commentator threat

If anyone out there is getting bored of *Matchday II* (because they always win by miles, and they get thrashed when they put the skill level up), here's the solution: commentator! I give my players names, like Stavros (centre forward) Loadsamoney (Winger) Harry Enfield (winger) and Buggerallmoney (midfield). You can really go over the top with commentating, or just go... 'Yop! yop! yooopp!' like David Coleman. I am brilliant.

Luke Storkey (11)

That's ehrr, remarkable! Actually I find *Matchday II* is fine as it is, but I've tried your solution, Luke, and it really does work. My favourite was the snooker commentator who said, 'And for those of you watching in black and white, the blue is the one behind the red...'

Does anyone else do anything to improves thing during a game (that we can print)?

AA foul language protest

I enjoyed your 'Whizzkids' article but please, in future can you please leave out some words readers of roughly seven will not wish to read.

**Martin Biggs (11)
Poole**

Interesting point. So you want us to falsify our quotations so they won't give offence? Surely when there is unpleasant violence and sexism in so many computer games, the odd only very slightly naughty word in the context of a lengthy and serious interview is not going to turn any seven year old off? Besides, I don't know many seven year olds who don't wish to see such words: generally it's their worried parents and teachers who try to protect them. But we take your point, and generally take great care with

● Computer games 'violence' horror

Last year you published in booklet form a collection of pokes, maps and tips which had appeared in your magazine during 1986/87. It proved a constant source of inspiration and an essential lifeline to my children and me at times when we would have otherwise given up trying to persevere with games because of intense frustration brought about by apparently inadequate dexterity and reduced mental capacity (probably exacerbated by rage at being constantly thwarted at the last as victory seemed to be within our grasp).

Your publication therefore not only saved the family's sanity, but also helped to greatly enhance the pleasure and satisfaction we gained for our money; it was also instrumental in preventing me from putting a fist through the monitor's screen in particularly stressful moments.

You will therefore not be surprised to hear that I have been looking forward to your publishing this year's edition, and understand my disappointment that, as yet, there has been no mention of its impending appearance. Was last year's booklet a once only offering or will you be making it an annual feature?

**I. Ellison
Gloucester**

At present we have no plans to do another Cheat Mode booklet, but if there was sufficient interest we might change our minds...

what goes into the mag - hands up those who said it sometimes doesn't look like it!

Loads of terror

Help! the other day I bought *Druid II*. I rushed home to play it, but to my disappointment it did not work properly. I loaded the other side but the same thing happened, so the next day I took it back and they kindly changed it for me. When I got home I loaded it straight away. It still didn't work and neither did the other side so the next day I took it back again. This time they loaded my tape on one of their Amstrads. It worked first time. They gave it back to me and told me to try it again, but it still wouldn't load on my computer. I tried it without any added peripherals, that included the joystick, but still no luck. The plot thickens, because I own a 464 and that was the model in the shop. My tape deck is clean, especially the heads and wheels, I

cleaned them only a few weeks ago. I have well over a hundred titles all originals and they all work perfectly. So something is definitely wrong and I just hope it isn't my computer. Please print my letter as I'm sure I can't be the only one with this kind of problem.

David Durrant
Peterborough

If Druid II does work in the shop, but not at home then your machine is to blame. The tape heads are probably out of alignment and need adjusting.

'Fish out of water' probe

For nearly two years I have been trying to purchase a copy of *Jack Charlton's Match Fishing* for the Amstrad CPC 464 (cassette).

I have been to many software stockists to try and buy this game, but none of them have it in. So I have ordered it many times in many shops, but nobody is able to get a copy.

I have enjoyed many hours playing this game on a friend's Spectrum, but since then I have moved houses and have tried loads of computer shops all over England.

I wrote to Alligata (who released this game) but had no luck. My letter to them was returned by the post office stating that this company had gone away!

Matthew Taylor
Bury St Edmunds

The rights to some of Alligata's games have recently been bought up by Superior Software, but a fishing game endorsed by Ireland's footy boss is not, unfortunately, one of them. Does any kind soul have a copy they'd like to sell, lend or even give to poor old Matthew?

Sensible suggestions shock!

As a father with young children who are becoming increasingly interested in the family computer I wonder if you might do a little more to cater for this in the magazine. The following are suggested:

1. An indicator on games reviews i.e. 'this might appeal to under 7'. Sometimes your reviewers mention this, could it be formalised? Some people might disagree but to my mind there is a difference between the 'killing' that takes place in say, *Kane*, to say, *Barbarian* and games like *Parky* or *Paperboy* manage to be good games without any death at all. The difficulty of the game-play would of course have to be another factor in any recommendation.

2. How about the equivalent of a 'Children's corner' somewhere in the mag? Perhaps containing a simple type-in or comic strip etc. This would enable the magazine to be shared rather than just being for dad.

3. Type-Ins seems to go from strength to strength but I wonder if there might be scope for those who can't write programs themselves to have a chance to indicate what they would find useful. Besides being of value to the sender of the idea it might prove stimulating to the 'typers' to try to deliver the goods. I'll start the ball rolling if you like by asking for a program that will make a library disc of the discs in my collection and allow me to add, delete, print etc.

L. Smart, London

1) Perhaps. The trouble is, young people are extremely sensitive if they think, rightly or wrongly, they are being patronised, and if we said, 'This game is great for five to seven year olds', five to seven year olds all over the country would be saying, 'I'm smarter than that, I can play loads of games fifteen year olds play'. Indeed, I have recently heard this argument used by software houses as their reason why they don't do the same.

2) We try not to ghetto-ise the mag more than is absolutely necessary: we know many 'serious' users play games, for example, and many alleged games freaks are greatly interested in word processing and so on. So our attitude to children isn't to say, 'Here, you get on with this while we grown ups do the real stuff. I know that's not what you're suggesting, but it's difficult for adults to get the tone consistently right for children. However, let us stress that we are particularly interested in this suggestion, and if any suitable contributions come our way we shall endeavour to use them. Young people out there: get working!

3) Now this is a marvellous suggestion, and contributions are warmly invited. What would you like to see in Type-Ins?

by SARKAR

REACTION EXTRA

Digital Integration's Dave Marshall and Romantic Robot's Alexander Goldscheider get serious

“ THEFT! Is shop lifting socially acceptable? Or burglary? Of course not! So how on earth can magazines such as AA support companies like Romantic Robot?

I refer to advertisements in your September issue (and many previous occasions) for the Multiface Two and other similar devices. To quote the advert, 'No program is safe, solid gold for hackers' – no mention of course that copying is illegal! So who cares? Perhaps we had better lay out a few facts and we'll begin to appreciate the consequences.

Software houses employ programmers, administrators, marketing managers. PR agencies etc. We have development costs, production costs, rent, rates and advertising and distribution costs. Our products are marketed through distributors and retailers at discounts that enable them to make a living too.

Imagine you have spent more than £250,000 developing a product over 18 months only to see an advertisement for a product encouraging the buyer to copy your software. Blow a fuse? How restrained... We spend time and effort trying to reduce piracy, not because we're mean and nasty – this is our livelihood at stake!

So what are the excuses? 'You need to have the device attached for the program to run'. Is copying no longer theft? This is sales promotion, not active encouragement of copying. In other words, as long as your friend has one of these devices, illegal swapping and playground sales are OK? What about making the device insert a serial number on the copied program to tie it specifically to that device? Too expensive, I suppose, or perhaps not in the manufacturer's interest.

Here's another one. 'People learn from hacking – how to write programs etc' A few articles on games design and programming techniques might be more in order and more usable to your general readership. And what making back-ups and changing media? Our policy has always been to help the customer by replacing damaged produce at a nominal

charge for p. & p. We also provide an upgrade service if any customer wishes to change from cassette to disk.

Surely we share a mutual interest in seeing copying services banned. Come to mention it, they will be illegal soon ... heard of the Copyright, Designs and Patents Bill?

Dave Marshall
Director, Digital Integration

“ Software – and hardware-piracy is a serious problem indeed. The problem with Mr Marshall's letter, however, is that in trying to find a suitable scapegoat he picks on the wrong party and grossly misrepresents the facts. His suggestion that we advertise a product encouraging the buyer to copy his software is ludicrous! Mr Marshall quotes a line from our ad referring to *The Insider*, and associates it with the *Multiface Two*. This is not only unethical, it is just plain nonsense. Furthermore, the quotes are misquoted and taken out of context. We do say, 'No program is safe', but continue, 'once *The Insider* gets in'. There is indeed no mention that copying is illegal because *The Insider* has nothing to do with copying. *The Insider* is a disassembler, it translates bytes into machine code mnemonics. Our ad just stresses its uniqueness – the fact that any program can be instantly disassembled at a touch of a button. This is fantastic for anybody working with m/code – and disassembling/assembling is what programming on Z80 is about.

Of course we are against piracy in any form. The important issue is to draw the line between personal backing-up and illegal piracy. Backing-up is an essential activity in computing. It is perfectly legal and I cannot imagine it becoming unlawful. Since the Lords' recently ruled that the use of twin tape decks – whose only reason of being is copying – is legal, how can personal copying of computer programs conceivably be banned?

The Multiface is, among other things, certainly an ideal backing-up tool. The fact that it can transfer between tapes and disks is surely welcome. I appreciate that Digital Integration may release programs both on tape and disk and even upgrade for a fee from tape to disk, but by far not everybody else does. It is also

far simpler and cheaper to do it yourself and to put even, say, four different programs on a single disk – hardly anybody would do that for you! Remember that only with *The Multiface* can one decide at which point to stop a program, back it up and continue from the same point next time.

Only *The Multiface* makes it possible to save/dump any screen at any point and is therefore used by many magazines for screen shots. Finally, *The Multiface* has an unparalleled Toolkit, again unique because it sits outside your computer and can show and change all the inside at any time. This is a dream for any serious programming just as it is for simple customising of programs, poking infinite lives, etc.

We have literally hundreds of letters praising *The Multiface*. It has universally received most favourable reviews, has won many awards in the computer press, has been voted the best peripheral, etc. Computer machines use it to review games, top software authors for writing programs – and so on.

But then, its quality is not in question: its possible misuse is. Admittedly, programs saved with one *Multiface* will run on another. Mr Marshall is quite right in saying it would be too expensive to serialise *The Multiface* – not for us, but for the owners as the retail price would jump up and be unrealistic. The serialisation is also highly impractical when it comes to upgrades, repairs, etc.

Above all we are convinced that *The Multiface* is a genuine and unique multi-purpose utility and not a pirating tool. We do not believe for a second that it would ever be used for mass piracy – cassette or disk duplication would. In fact, we welcome this debate as it may bring valuable and views and information from the public on the matter, and on the use of *The Multiface* specifically. As for our part, I can only most strenuously refute Mr Marshall's criticism of our products and advertising in relation to illegal copying. I hope we will again see more productive efforts from Digital integration than the misguided and poorly researched letter in question.

Dr Alexander Goldscheider

Has Mirrorsoft's *Fleet Street Editor* been worth the wait?
Why does its arrival mean the AA finally gets tidied up?
Pat McDonald answers these and many other questions

FLEET STREET EDITOR

Mirrorsoft 01 377 4644 • £39.95
6128 disk only

Welcome to the only piece of software ever to be left behind by history. Thanks to The Computer, virtually no newspapers are produced in Fleet Street any more. Mirrorsoft have been converting *FSE* for quite some considerable time now – it was mentioned as imminent as long ago as AA4! It's long been an AA office joke: the stock reply to avoid unpleasant jobs was, 'I'll get round to it when *Fleet Street* is published'.

Looks like a lot of odd jobs will get done now...

First Impression

The package is encased in an attractive bright red binder. Inside there's a looseleaf manual and two disks. Maybe it's a big program? What's it do?

Fleet Street belongs to that branch of software known as desktop publishing packages. These are used to lay out documents, both text and pictures, into a professional looking finished page or pages suitable for publication. Such software ranges in scale from that which would have difficulty in laying out a club newsletter to the industrial level which uses them to print real books and magazines (such as AA – produced on good old 6128's and Apple Macintoshes).

On this sort of scale, it's fairly obvious which end the CPC by itself is closer to – but don't be too quick to judge (see the article in this issue to see how well CPC's do.)

Get down to it

The manual is loose leaf, and starts out well with a hands on demonstration using a partly finished document. This is easy enough to do, and teaches the elementary controls very quickly – as well as offering a friendly welcome to the program.

It's a shame that the manual doesn't help as much from then on. Rather than giving similar tutorials on further features of *Fleet Street Editor*, you are left with a long descriptions of lists of features and not much else. A pity really, because what's there is well written and presented.

I've dealt with the manual, but what of the two disks? Both sides of each of them is used: one contains the main program, the other contains lots of graphic libraries to use in your own document. There are plenty of these, although they are mostly small logos rather than digitized action.

Good stuff

The program has three distinct sections, arrived at via a front end screen showing three icons. The cursor keys or space bar moves the marker from one to the other, and RETURN selects it.

The first part of the package is the graphics section, used to organize the artistic element of a document. It accomplishes this

Press option

If so far you've got the impression that *Fleet Street* maybe isn't the best thing since sliced bread, you could well be interested in *Stop Press*.

Stop Press (*Pagemaker* as it was then called) was originally announced in the same issue as *Fleet Street*. It too was late (it was reviewed in AA17), it too had bugs. But Advanced Memory Systems took note of the huge response from users, and fixed the more obvious bugs. It is to be hoped Mirrorsoft do something similar: we'll let you know when they do.

What makes the difference between the two is that *Fleet Street* has three complete modules, which rarely necessitates the programs accessing the disk drive and so is relatively fast. This is in complete contrast to the AMS offering, which loads virtually every function from a program disk. So although using lots of different functions is slow, the way they operate is more sophisticated, because the disk has more space for programs than the memory.

The most fundamental difference is the dot resolution on the printed page. The maximum Epson dot resolution uses quadruple density graphics to produce 1,920 dots per line. *Stop Press* can print a page out on this screen, using the whole width of the page. By contrast, *Fleet Street* prints out a page across just a quarter of the page. In other words, the dot resolution is much less. This means that there's less you can physically put onto

Fleet Street and the output looks cruder.

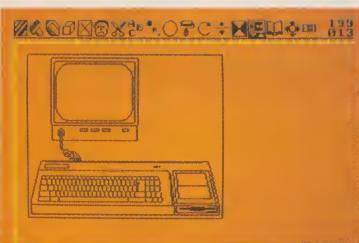

In addition to this, there are lots of little things that make *Stop Press* just that little bit special – you can load extra fonts, plug in a video digitizer, use graphics from outside much easier, scroll around faster, and so on.

This is unfortunate, because Mirrorsoft's product is much friendlier and easier to use. The way the individual parts all load – allowing you to get on with editing – together with the way you can adjust the baselines of columns, make the product fairly novel. Text editing, bugs notwithstanding, is much simpler. And it's cheaper, retailing (with its graphics library) for £39.95: compare that to the AMS price of £74.98 (price includes *Extra!* *Extra!*, the *Stop Press* library).

Even with the price difference, *Stop Press* is still head and shoulders above the competition. Hard luck Mirrorsoft, congratulations AMS.

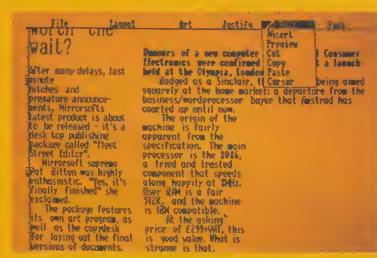

Desktop Publishing

Setting up artwork...

Setting up the headlines...

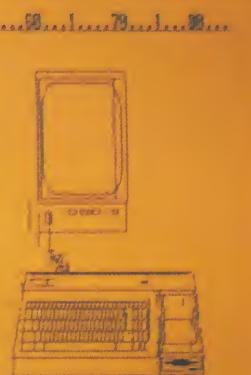

Main text should be well spaced...

HOLD THE FRONT PAGE!

Well, not quite. Here's how *Fleet Street Editor* copes with a page of Amscene

File **10** **20** **30** **40** **50** **60** **70** **80** **90** **100**
to be released - it's a
desk top publishing
package called "Fleet
Street Editor".
Mirrorsoft supremo
Pat Button was highly
enthusiastic. "Yes, it's
finally finished" she
exclaimed.
The package features
its own art program, as
well as the copydesk
for laying out the final
versions of documents.
Hard-bitten
Technical Editor Pat
McDonald was cautiously
impressed with the
program's performance.
It's quite easy to
grasp, unlike some desk
top publishing software"
she said.
"And it's powerful."

That could be of concern to the manufacturers
is the sophistication of the new machine's rivals.
Their sound and graphics are of a very high
standard indeed.

Adding graphics, then finally reshaping the text. The page is complete!

through simple two tone pictures. As every Amstrad owner knows, Mode 2 is the black and white high resolution mode, yes? So the program should use mode 2, yes?

Well, no, actually. Instead images are read into the machine using medium resolution mode 1. The reasoning, apparently, stems from the fact that the pixels are square, rather than rectangular, in this mode. Artwork and drawings are thus easier to get into proportion.

The cursor/pointer used in the art package is a nifty little item, featuring the usual cross hairs and a flashing dot in the middle. If the dot doesn't flash, it means the machine is busy doing something. The **SPACEBAR** is used to confirm decisions (why?), rather than the **RETURN** used in other parts of the package. The above is used to control the WIMP environment which stands for (all together now!) Windows, Icons, Mouse and Pointer/Pull down menus, depending on where you heard it.

Running across the top of the screen is the usual row of icons. By the left (wait for it!)... **Brush size adjustment**, **paint**, **pencil**, **boxes**, **eraser**, **undo**, **scissors**, **text**, **zoom**, **circle**, **fill**, **rotate**, **mirror**, **invert inks**, **disk access**, **library**, **re-size** and **exit**. Also on the screen are the **screen co-ordinates**. For an exciting, dynamic explanation of what they're used for, read on.

Freehand

Doodling on the screen is easy – and fun. The regular drawing functions are there: line drawing, circles and boxes created with 'elastic lines', so exact positioning is not difficult, though most of the time you probably won't be so finicky. Other aids to getting your artwork just right are the screen co-ordinates, which can be remembered when drawing point-to-point. Drawing the edges of shapes, then, is more or less trouble free.

Filling these shapes with patterns – to give the effect of shades of light and dark – is also no problem. The fill command gives a list to choose from, and you can define your own pattern. The brush command is similar, but the pattern only goes where you put it, as opposed to fill splattering 'ink' all over your design. The brush size is adjustable in both width and height. Regrettably, a spray-can function has not been included.

The graphics libraries stored on the second disk can be accessed from the art program simply. They can be loaded into a spare screen, and the artwork you desire can be moved into the

main editing area with the minimum of fuss.

Text is fairly easy to add onto a piece, although there are drawbacks with this function: characters can be printed in any direction, but no extra fonts can be added, and text always remains in the same size. And because shift is used to swap between icons, capitals must be selected using **Caps Lock** – not the easiest thing to remember. The **Copydesk** should settle most of these deficiencies.

A copy of the screen before the last operation was completed is always held in memory, so experimentation is not fraught with danger. The icon, strangely enough, is a face.

Job done

Finishing off artwork can be laborious, and the editing operations that help with this are good. Mistakes are erased with the paint brush option using a blank pattern. Large rectangular areas of the screen can also be cleared, and wiping the whole screen has to be confirmed by pressing **y**.

Moving areas of the screen about – cut/paste operations to the technical – is efficient, if somewhat slow. Similarly, mirroring and rotation can be done on small parts of the screen. Zooming in for some fine detail is just as convenient to have, although **RETURN** has to be pressed to finish it, not **SPACE**.

There is a re-size function to enlarge or compress an area, and distortion of the image is minimal.

Finally, artwork can be saved out as a cut, or box, saved to disk in a compressed form – a full screen might use as little as 8 or 9K. These cuts can be included on a page.

Problems, problems

Using this art program is easy, but importing graphics from outside ranks with turning your 464 into a 6128 for difficulty. The problem lies in the fact that ink 0 is used for the foreground (ink colour) and ink 1 is used for

the background colour. So images that you load look like photographic negatives.

Admittedly, writing a Basic program to invert the inks (or even process them) is not too difficult, but it shouldn't be necessary in the first place.

Copydesk

This part of *Fleet Street* deals with actually producing a page, using some fairly traditional methods. Sitting comfortably? Then we'll begin.

Until a few years ago, printing masters were set up by typesetters, who used to insert characters made out of lead into a blank page board. This would be set up manually to have the correct layout, with the margins set up, and so on. It was a time consuming and extremely skilled task.

In a superficially similar way, *Fleet Street* lays out the text across a grid-like pattern that conforms to the page layout. The grid is alterable, so that you can place pictures on the page, and have text flow around them. This is a very fundamental feature – the program remembers the text and pictures independently of the screen memory. If the layout is changed, the page is redrawn from this backup buffer to conform with the new pattern.

When you've loaded (and turned over the disk) you can select the margins. A wide margin looks better, but gives you less space to work on. After that, you select the number of columns – the page you are reading has two.

The screen setup is similar to the art program, in that there is an options line across the top of the screen. This contains the words (no icons): **File**, **Layout**, **Art**, **Justify**, **Edit** and **Font**.

Incredibly slow

Edit is probably the most used. It contains the option **Insert**, for getting at the text. You must first select which column you wish to edit – they are all independent of each other. That way, a mistake on one doesn't generally mess up the others as well. There are also some cut and paste options, which work very well for editing text. You can even examine the cut and paste buffer, to check that you're moving the right thing. Oh, and you can get a preview of your work – although this takes minutes, and involves saving the page to disk.

Inserting text is probably the most time consuming part of using the program. The scrolling up and down of the page is so incredibly **slow**. You can almost see the program thinking, 'Hmm... Shall I scroll a bit more?'

The program supports a fair range of fonts, all selectable from one of the pull-down-menus. They include both serif (with tails) and sans (without). The full list is West End, Ritz, Italic, Cube (science fiction), Full, Engraved, Olde and Stencil. – the names are loosely descriptive of the fonts' various appearances. A bold option is included, as well as 16 point and 24 point size characters for headlines and straplines.

Unfortunately you cannot load or design any alternative fonts – you're stuck with the above. It may seem a lot, but only four fonts for headlines? Methinks two pages produced with this by two different people will look almost identical.

Justification of the document is configurable, in that you can choose between left justified (ragged edged), centre (so everything is central) and full out, which makes lines fit across the screen as much as possible. The trouble is that this function is global, i.e. if you redraw the screen, all the text appears using the one justify option! You can get round it, but it's tricky.

Inserting text is all very well, but the pages are generally formatted around the pictures. These are loaded from within the **File** menu, and put onto the screen using the **Art** menu. Positioning is accurate down to the character scale which is always onscreen, so getting it right isn't difficult. Problem: at present, loading graphics corrupts them! What you get is the original picture, with extra lines cutting it at random. Not good.

There are also two art commands, line and box, which can be used to surround text to good effect. The hassle (and positioning graphics is just as bad) is you can only place artwork on what is onscreen – which means scrolling down to the relevant part of a page. Once you have some artwork, you'll probably have to tidy up where the text goes, so that the two don't overlap. *Fleet Street* is good at this. You can choose to do a whole change, which changes all of the text column widths at once: a single line

Head to head

	<i>Stop Press</i>	<i>Fleet St Editor</i>
Editing Area	911 X 557	640 X 640 (approx)
Scrolling Speed	Good	Fair
(Page top-bottom)	4 secs	1 min 30 secs
Print options	Yes	No
Standard screens?	Yes	No
Page length in bytes	69632	37888

The evidence is incontrovertible: *Fleet St* is hopelessly underpowered compared to *Stop Press*.

change, good for irregular columns (wrapping around graphics): and above or below the cursor line, so you can setup boxes of text quite easily.

In a similar vein, you can adjust the 'leading', an archaic term which refers to the spacing between the lines of text – the 'baselines' (we've increased the leading in this paragraph to illustrate what we mean.) Spreading your text vertically in this way makes it much easier to read.

Finally, the **File** options generally do the housekeeping tasks necessary to keep the system working. These include the obvious features – loading and saving text and pages, and loading graphics – as well as the more novel...

If a column overloads with the text, the excess can be placed in an overflow buffer. This is similar to the cuts buffer, but it can be retained if the screen is cleared. So you can put more text onto a second page if you run out of space, although you must finish with the first page first: you can only edit one at a time.

The limit

One of the problems with *Fleet St* is to do with the way it remembers everything that goes onto a page. Inclusion of lots of graphics is not possible, because the memory fills up relatively quickly. Two 9K pictures won't fit at the same time. You can't just load one, put it up, delete it and load the next either – it's wiped from the page as well as memory when you delete it.

The printing options are fair. Both draft and quality prints are supported: put simply this means that the print head prints either once or twice.

All in all, I can't say I'm terribly impressed with the **Copydesk** part of *Fleet St*. The problems aren't just the bugs, which are fairly awful in themselves: no, it's the slow speed of scrolling, and the lack of memory for graphics.

I did say that there were three parts to this, and the **Administration** is the last module. It is used for mundane tasks like setting the default drives, changing the screen colours etc, and also for converting four colour mode 1 screens into two colour mode 1 screens. It makes no attempt to interpret the image, so you're generally left with a negative image that's unusable.

Finished?

In conclusion it must be said that, even for a pre-production copy, this program is useless for desktop publishing. The only purpose for which people would buy it is as a challenge: make up a page **despite** the bugs and user unfriendliness...

GOOD NEWS

- Relatively cheap.
- Manual is well written.
- Easy to edit text.

BAD NEWS

- Bugged beyond belief.
- No extra fonts.
- Not exactly fast.

WITH AN AMSTRAD CPC TV & COMPUTER SYSTEM YOU'LL WANT TO BE SENT TO YOUR ROOM MORE OFTEN.

COLOUR TV & COMPUTER MONITOR

Not only is the monitor great for playing games in glorious technicolour, when used with the Tuner you have a brilliant 14" colour TV. So after a hard day blasting aliens you can relax and watch your favourite TV programmes.

17 GAMES

You can get started right away with the 17 Games included in the package. There's all the best titles (Trivial Pursuit®, Monopoly®, Cluedo®, Scalextric® and Scrabble® to name just a few) so the fun starts as soon as you get your hands on an Amstrad CPC TV & Computer System. (Cassette boxes shown for illustration.)

CPC 6128 COMPUTER

A state-of-the-art disk drive computer. So if it's power you want, the CPC 6128 has the memory of a whole star system. The disk drive gets you loaded and ready to fire in seconds.

WORKDESK

The Workdesk keeps everything in one place. So you have the complete TV & computer system at your command all of the time.

Amstrad CPC TV & Computer Systems turn any bedroom into a nerve centre of pure excitement.

A colour-TV, colour-monitor, clock/radio, CPC computer, with disk or cassette drive, 17 games, joystick and a workdesk to keep everything tidy, all add up to the best home computer package ever offered.

If you've got an Amstrad CPC TV & Computer System in your bedroom, being sent there is never a problem.

AMSTRAD TV & COMPUTER
SYSTEMS FROM

£399. £499.

Available at participating branches of: Alders, Clydesdale, Comet, Currys, Dixons, Hobbyte, Hughes TV & Video, Laskys, Peter B Ledbury, R.V.S. Ltd, and all good stockists.

FULL RANGE OF PCW & PC
SOFTWARE AVAILABLE

ABSOLUTE BEGINNERS

More Basic the easy way

Even if you're crazy about numbers, that last program probably didn't get you too excited. Well, let's see if we can do something a bit more interesting. Try this:

```
10 FOR a=1 TO 50
20 CLS:MOVE 320+a, 200-a
30 DRAW 320+a, 200-a, 1
40 DRAW 320+a, 200-a, 1
50 DRAW 320-a, 200+a, 1
60 DRAW 320-a, 200+a, 1
70 NEXT a
```

It's a modified version of the square-dragging program from last time, only this time the square stays in the middle of the screen, starting as a point of light and gradually growing larger. You could use the STEP command to make it grow faster, the way we did last time. Try modifying the program to read like this:

```
5 a=1:b=2
10 FOR c=1 TO 10
15 a=a*b
20 CLS:MOVE 320-a, 200-a
30 DRAW 320+a, 200-a, 1
40 DRAW 320+a, 200-a, 1
50 DRAW 320-a, 200+a, 1
60 DRAW 320-a, 200-a, 1
70 NEXT c
```

Now you'll find the square grows faster and faster, as if you're flying towards it. So what's changed?

The variable 'a' controls the size of the square. In the original program 'a' was the loop variable, so it increased by a fixed amount each time. In the modified program on the other hand, 'a' doubles each time. That's what the '`a=a*b`' in line 15 does. It's the same technique we used in the 'powers of 2' program you typed in earlier on, only here the variable 'b' is used instead of 2. It works the same way

though, because line 5 set the value of 'b' equal to 2.

The only problem with this modified program is that it's a bit fast. If we want to slow it down, we're going to have to reduce 'b' a little. Try changing line 5 to '`5 a=1:b=1.5`'.

Now edit line 10 so the loop repeats a few more times: '`10 FOR c=1 TO 20`' is about right, but the precise number isn't too important. To slow the program down still further, just set 'b' to some even smaller number - but keep it greater than 1 - and alter the loop count in line 10.

Print

The **PRINT** command is pretty cumbersome to use. Try this little program:

```
10 FOR b=1 TO 10
20 PRINT "This is message number"
30 PRINT b;
40 PRINT "out of total of ten"
50 NEXT b
```

Even using question marks, that's a bit long-winded for such a simple operation. If you wanted to do all that printing in one program line, you'd end up typing.

`"This is message number ";:?b ;:?"`

`out of a total of ten"`

Notice the way you have to put semicolons to stop the CPC from moving down a line, immediately followed by colons to separate it from the next **PRINT** command.

In fact, you don't have to do anything so complex. If you want to print a whole load of things on one line of the screen be they messages, variable values or whatever - you only need one **PRINT** command for the lot of them. That dreadful line above becomes.

SUMMARY

We've seen that many commands have numbers which control them: these numbers are called operands. In the last few instalments we saw how variables can serve as operands. This time, we've seen that an operand can in fact be an arithmetical expression like '`a+10`' or '`c-d+32`'.

You can perform all the normal arithmetical operations, but some of them use unfamiliar symbols. While 'a' plus 10 is just '`a+10`' and 'a' minus 10 is '`a-10`', 'a' times 10 and 'a' divided by 10 are '`a*10`' and '`a/10`' respectively.

Expressions aren't just useful as operands. They can also be used in assignments - the commands which assign values to variables. Things like '`a=b`' or '`a=45*b`' are fine. You can take this even further with assignments like '`a=a+10`' which increases 'a' by 10, and '`a=a*2`' which doubles 'a'.

`??"This is message number";b;" out
of a total of ten"`

This time you don't need any colons, because you're not trying to separate different commands. The only command in the line is the question-mark at the beginning, meaning '**PRINT**'. The rest of the line is just the material you want printed - we call this the *printlist*. The semicolons between the different items not only separate them, but also make sure the CPC prints them all on the same line of the screen.

Although **PRINT** was one of the very first commands we covered, we saw it there only in its simplest form. When we met **FOR-NEXT** loops a couple of issues back, we came across another use of **PRINT**. This little program shows both forms of **PRINT** command at work:

```
10 PRINT "And now for a whole
load of numbers"
20 FOR a=1 TO 10
30 PRINT a
40 NEXT a
50 PRINT "That's all folks!"
```

The **PRINT** commands in lines 10 to 50 each put a message on screen, while the one in line 30 prints out the value of the loop variable 'a' for each pass through **FOR-NEXT** loop.

This much you've seen before in other forms. Now try typing in a new line between lines 20 and 30.

`25 PRINT "Number";`

Note the semicolon at the end of the line. Don't put a colon there by mistake, or you'll miss the point of the exercise.

You won't be surprised to find that line 25 prints the message 'number' on screen. Up till now, each **PRINT** message has gone on its own separate line of the screen.

Every time the CPC gets a **PRINT** command it puts the message (or variable value or whatever) on screen and then moves down a line.

It does this because the CPC assumes you'll want the next message printed on a separate line. You can see this very clearly indeed if you add this new line 35 to the program:

`35 PRINT`

When you now run the program you find it leaves a blank line after each 'Number' message. The **PRINT** command in line 35 makes the CPC move down to the next line of the screen, even though there isn't any message to print.

As we've seen, the CPC assumes that it's supposed to move down a line after each **PRINT** command.

The semicolon on the end of line 25 tells the CPC to stay on the same line, and this means that line 30 prints the value of 'a' on the same line as each 'Number' message.

Next month we put our newly acquired knowledge of printing to work

WHAT USE IS A CPC?

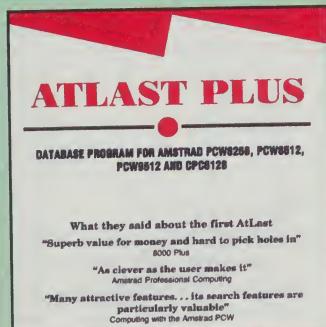

So you can shoot aliens with it. What else can you do?
Steve Carey hears the views of some serious users

In the month that sees the launch of The Sinclair Professional Series PC 200 (see AmScene), it is worth pointing out that the CPC itself is used by precisely the groups of people the Sinclair is aimed at. On the one hand there are the games aces, who value the CPC's sound and graphics capabilities; and on the other there are the serious users, who

know that the CPC has been greatly underestimated as a small business/word-processing machine. But don't think that the two groups are mutually exclusive: some of the fiercest joystick waggles by night are respectable business users by day, and many Protect and Tasword users play a mean game of Driller or Bard's Tale when they think

no-one's looking!

So Steve Carey set out to discover just what serious CPC'ers do with their computers. And he was surprised to discover just how diverse are the businesses and enterprises that depend on CPC - from magazines to burglar alarm catalogues, and from indexing slide collections to teaching computer literacy...

Rational Solutions' *AtLast Plus* is the brainchild of Mike York, who wanted to write a decent accounting system, but found himself dissatisfied with the database programs available at the time for the CPC.

'It's quite normal on CP/M database programs', says Mike, 'to have to re-sort an entire file - which can take hours on longer ones - after adding a new record or editing a key field, because automatic index updating is rarely incorporated. And often you have to use upper case names if you want alphabetical sorting, because normal ASCII sorting puts all lower-case letters after all upper-case letters!'

So Mike wrote his own. 'Getting a new program on the market when you are a one-person business and have no reputation is a very difficult task', he recalls: 'My biggest problem was getting people with influence to take a serious look at it'.

'One way and another the accounting program has been indefinitely postponed, since publishing, marketing and maintaining *AtLast Plus* has taken nearly all my available time. Anybody out there want an administration and marketing job so I can get on with some programming?'

Peter Dance - who admits only to being 'on the wrong side of 40' - bought the original *AtLast* when he bought his CPC. (He discarded his green screen monitor, by the way, and installed a Philips amber screen instead - even though Amstrad told him it couldn't be done!) 'Over the two and a half years since then', he says, 'I've found that *AtLast Plus* has

subtly added features, making printer control easier, for example, with fewer keystrokes and so on'.

Peter - 'I never play games on my CPC: it's policy' - uses *AtLast Plus* to run a colour slide library for Air-Britain (Historians), an amateur historians' organisation, of some 6,800 items (allowing for duplicates it's nearer half a million!). They're indexed by slide number and aircraft type, for instance, and the instant, no-sorting method of *AtLast Plus* is a big boon.

Peter - a busy man, clearly - also uses it to run a kit car owners club database (CCLUB) for the Charger Club,

and admits that a properly relational database might be of assistance, but claims to manage perfectly well without it.

He's done cheque reconciliation on *AtLast Plus*, too - 'Some people use spreadsheets, but with a bit of ingenuity a database is quite sufficient' - and has clearly experimented and tested it to its full potential. 'Certainly from the point of view of general usefulness there's no application I've required on my CPC that *AtLast Plus* hasn't been able to perform'.

See Special Offers at the back of this issue for a very special deal on *Atlast Plus*

Win the pick of the pack!

Perhaps we've whetted your appetite, suggested some possibilities you've never seriously considered before?

We have? Good. Because we have a whole heap of software to give away, and very soon the first half dozen names we pull out of the AA bag will be opening a large parcel containing the following pile of CPC software goodies:

Competition not open to employees of Future Publishing, any of the participating companies or their relatives. Sorry mum.

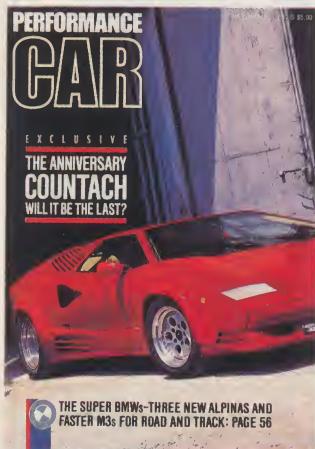

- Mini Office II, the best-selling budget word-processor-cum-data-base-cum-spreadsheet-cum-comms...;
- Money Manager, the financial management package ideal for personal/small business use;
- Parrotty Plus, the art package Pat 'Picasso' McDonald rated as 'one of the most useful programs ever

released for the CPC range'; ● and Protect, the word processor used here in the AA office (but don't let that put you off!).

So simply send your name and address on a postcard or the back of an envelope (positively no envelopes opened!) to: AA Serious Comp, Amstrad Action, 4 Queen St, Bath BA1 1EJ, before November 30th 1988.

CPC performance!

Jesse Crosse, editor of *Performance Car*, is convinced that, the CPC, with *Protext* and *Promerge*, is 'vastly underrated. There are things you can do on it and with it ten times better than with the 16-bit business machines everyone's always raving about - and they cost ten times the price!'

Jesse knows what he's talking about. He introduced the CPC and *Protext* into AGB Specialist Publications which now uses about 50 of them to do everything a publishing company has to do - 'from journalists writing copy, to secretaries typing letters and sending out individually addressed letters to competition entrants'.

Jesse has written a number of programs himself to exploit

the full 'vast potential' of *Protext* and *Promerge* - which, as he points out, can be made to double as a database with full multiple criteria search facility.

All the journalists on *Performance Car*, as well as many other people working in the company, use Jesse's specially devised phonebook program. 'Even with ROM-based *Protext*', Jesse points out, 'you can have a bootup, as we do, which loads my phonebook onto a split screen, so it's effectively memory-resident while you work on the top word processing.'

It works using *Promerge's* mailmerge facility with the printout, obviously, to screen. And you get around the file-length limitation by having 26 files entitled

ADDRESS.A, ADDRESS.B and so on. That also helps cut down on the search time that's inevitably a problem with hundreds of entries. (Of course the real drawback about such a

phonebook program is persuading people to spend the time keeping it up to date!')

The most amazing thing Jesse has so far done with *Protext*, however, is a truly remarkable roadtest generation program. As you'd expect, a magazine that tests Porsches and Aston Martins every month (it's a hard life!) must produce an elaborate 'Roadtest Specification' that details such things as fuel consumption, acceleration, bhp per ton and per litre and so on. So Jesse wrote a program...

It's the car journalist's nightmare, that simple little panel. It used to take 41 calculations and easily several hours' work. So over a period of time I wrote something in *Promerge Plus* that runs to 13 feet of printout to do it all for you. You simply key in the data and it does all the calculations for you - it even asks you whether the test vehicle is automatic or manual, and adjusts the figures accordingly!

'Then it merges the results into a standard form file and prints out all the results in panel form.'

Have you considered making such a program commercially available? 'Oh no. The thing is, it's obviously limited to magazine work, and more particularly car mags - in

See here!

- AA13: seven page special devoted to making music with your CPC. (And see also AA26 for everything you ever wanted to know about Midi.)
- AA18: comparative review of: Pyraword, Protext, Tasword, Mini Office II, WordStar, NewWord, and the educational package Pendown.
- AA23: set of excellent tips for Tasword, Protext and Wordstar.
- AA29: six top spreadsheets compared - Cracker, First Calc, MasterCalc 128, Matrix, ScratchPad Plus and SuperCalc 2.
- AA30: five top databases compared - Random Access Database, Ultra-base, AtLast Plus and Masterfile III.
- AA32: survey of available educational software.

other words, the competition. And I'm damned if I'm going to let them have the advantage we've got!'

So the CPC is capable of more than it's usually given credit for? 'Absolutely! It's a fantastically powerful machine for the price, and it's tragic that everyone's underestimated what it can do. With a CPC and *Protext* you can run a ridiculously cheap operation - actually I would say it's superior to something like *Wordstar* on an IBM, but no-one would believe me!'

Frankly, no-one's even remotely plumbed the depths of what *Protext* can do. If you look in the nooks and crannies of the manual (very well written, by the way), you can find all sorts of things - invoicing using *Promerge*, for instance - that most people don't even dream of doing. You really don't need a very big brain to make it do some very interesting things'.

So why have so few people in business tumbled to all this? 'Probably because it's not the industry standard. Everywhere you go you find IBM PCs - but look at how much they cost!'

TELETEXT

A world of information
at your fingertips

A Microtext Adaptor turns your 464 or 6128 into a sophisticated Teletext Receiver. Giving you access to any of the hundreds of free pages from Cefax or Oracle. As well as up-to-the-minute news or football results, there's the local weather or even bargain holidays. And Teletext caters for special interests, like computing, motoring, or gardening, you'll find things to do and places to go in your area plus much more.

But unlike a Teletext TV, a Microtext Adaptor allows you to do a lot more with the information, you can save a page to disc or cassette, perhaps to keep a watch on share prices, or print pages like what's on TV. There's free software too! Amstrad software is broadcast in a special format on Channel 4 for Microtext users to download. Plus you can access and use Teletext data from your own programs, providing endless possibilities.

The Microtext Adaptor fits neatly on the expansion port, it comes with software and is very easy to use. Just connect it with the lead supplied to the VIDEO OUT or AV socket of a video recorder and change channels with the controls on the video or, there's our own Tuner which has been specially designed to provide the signal that the Adaptor needs, plug in an aerial, it tunes itself in (!) and channels are selected from your keyboard. Tune into Teletext, a world of information at your fingertips.

'A well thought out product that performs admirably.'
Amstrad Action Sept. 88

A Microtext Adaptor for use with a video is only £74.95 Adaptor and Tuner just £124.90 Prices include p/p & VAT.

Instructions are provided to transfer software to disc. Disc's are available for £5.00 extra

MONEY MANAGER

SAVE £5 on RRP of £29.95 when you order direct from Connect Systems

ONLY £24.95

Incl. VAT, P&P

Financial management software for personal and/or small business use

Money Manager is an easy-to-use system for recording all financial transactions, and for analysing them in a number of very powerful ways in order to facilitate sound financial management. It is ideal for controlling the finances of a small business, or for users wishing to control their personal finances in a business-like way. Use it to check bank statements, keep track of expenditure, monitor cash flow, make budgeting forecasts, prepare business financial statements, pacify your bank manager, convince the tax and VAT inspectors, avoid nasty surprises, etc. etc.!

12 months of entries are kept in a file stored on your disc. At any time, you may load a file into the computer memory, add to or edit the entries, analyse them, print statements, and then save the updated file for later use. Entries may be historic (for record keeping) or forecast (for budgeting). You may have any number of separate files, and make copies of files for archive purposes. You may advance the period covered by a file month by month.

- Up to 100 separate transactions may be entered per month. Each entry consists of:
- The day of the month, e.g. 23rd of June.
 - An account number, one of up to 9 defined by you to suit your circumstances e.g. 1=Barclays, 2=Visa, 3=Halifax etc.
 - Reference, e.g. ABC123 for a cheque number or invoice reference.
 - A class code, one of up to 50 defined by you to suit your circumstances e.g. h0=Household expenses, h1=Mortgage, h2=Rates or p0=Production, p1=Raw materials, p2=Assembly, p3=Packing, etc.
 - A description so that you can see what each transaction was for, e.g. "New gearbox" or "Box of 10 discs."
 - An optional single character mark which you may include for further classification, e.g. b=business, p=private, etc.
 - The amount of the transaction, which may be plus or minus.
 - A marker to indicate whether the entry is exempt, zero rated or taxable for VAT, or alternatively the actual VAT paid.

You may select categories according to account, class and mark (e.g. all entries, or all motoring expenses for business using a credit card, etc.) and produce reports on the screen or printer as follows:

- Full detailed statements, showing each transaction for any month or for the whole year.
- Detailed monthly VAT statement showing input and output amounts excluding VAT, the actual VAT and the total amount, plus totals and net VAT due.
- Tables showing the totals in each class for each month of the year.
- Tables showing the totals in each class for each account.
- Tables showing monthly maximum, minimum, average balances, turnover, cashflow etc.
- Bar graphs of any category month by month.
- Pie charts of annual totals for various categories (CPC version only).

Plus: standing orders—entries optionally sorted into date order—item search facility. Comprehensive manual and full set of practice data included. Full telephone support.

Send cheque or credit card number or phone for immediate despatch

Write on with your CPC!

Protex, written by **Gavin Every**, was first released back in August 1985, with **Prospell** and **Promerge** emerging (sorry) in April of the following year. Talking to **Mark Tilley** of **Arnor** is a breath of fresh air, for he claims that **Protex** is still selling in 'respectable quantities', and indeed boldly asserts that it has overtaken its rival, **Tasword**, as the biggest selling CPC word-processor. (For the remarkable story of how a whole publishing company runs on **Protex** on CPC, see elsewhere in this article.)

Chris Garrett – yes, the **Garrett** of the AA cartoons – runs a whole business simply using **Protex**. Chris has an enormous stock of pop music magazines of the last thirty years featuring artists from the Beatles to Bros (whoever they are), hotly sought after by fans all over the world. (He's having an extension built to his house just to contain

them!) He simply searches his **Protex**-based catalogues of some 4,000 items (and rising) and copies references into a separate file, printing them out and sending them to the person who made the request.

But what about the file length limitation? Well, I can get a run of about eight or nine years of a music paper onto one file, and that's quite sufficient. As far as I know, I'm the only person in the country doing it this way, he claims: 'there is someone else in the same line of business – but he still does it all on typewriter! I could cry when I think of the wasted effort: **Protex** is only a word processor, but it's ideal for shuffling round vast wads of indigestible material'.

Still, even Chris baulks at using **Protex** for his accounting!

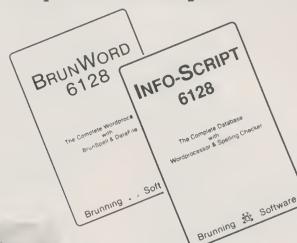

Rev. Peter Amies, a Baptist minister who is one of ten area representatives for the Baptist missionary society – and they all have CPC's! – has used both **Brunword** (recently upgraded to **Infoscript**) and **Tasword**,

and comes down very firmly in favour of the former. (He does, however, miss one **Tasword** feature, which indicates whether you're in lower or

upper case and can convert upper back to lower at a stroke.)

Rev. Amies, 61, had some previous experience of computing, using a Spectrum for a number of years. Nowadays, however, it's the CPC and **Infoscript** that helps him word process articles, sermons and seminars. He also uses **Taspri** for producing notices and captions for photographs.

The update to **Infoscript**, he says, was a 'marvellous' idea, with an 'excellent dictionary that's fabulously fast compared to **Tasword**'.

Peter Ashton runs **Pass Alarms** with the assistance of **Brunword**, and more recently has upgraded to **Infoscript** – which integrates the word processor with a database.

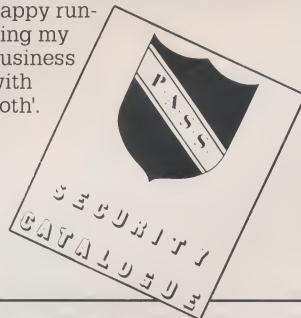

Peter, 31, runs an alarm installation company by mail order, and runs his catalogue on **Infoscript**. He has two databases, in fact: one for installation details, servicing

and so on; and another for my catalogue'. And he uses **Brunword** to draw up wiring diagrams (!), with numbered wires and grid matrices of dashes and dots.

I had previously used **Tasword**, Peter recalls: 'but I found it lacking when it comes to justification and spell-checking. I saw **Brunnings**' offer of a week's free trial and decided to take them up on it. And I got hooked'. The main difference, he finds, is sheer speed, which he finds 'quite remarkable' in **Brunword**.

One problem Peter shares with many users of databases is the time it takes initially to enter the data: 'Getting things going is time-consuming. Every house is different, of course, and I've amassed lots of different estimates. But I'm beginning to find now that I can patch and paste pieces from already existing files to make up new ones'.

'It's a super program', he concludes, 'and the CPC is a super machine. I'm perfectly happy running my business with both'.

Taste for accounting?

Accounts programs for the CPC are something many of us imagine we could probably write if only we had the time. Indeed, they typically get written for the benefit of the author him/herself – another one, called disarmingly *Simple Accounts Routine* is out very soon (£15 from Douglas Thompson, 8 Hyholmes, Bretton, Peterborough PE3 8LG).

The story of *Money Manager* is typical. Gavin McHamish, who wrote the program, has an engineering background and wrote the original program for his own benefit when he found there was nothing commercially available to do what he wanted. So in 1986 *Money Manager* was born. Now in its third incarnation this 'financial management soft-

ware for personal and/or small business use' is still going strong.

Our review, way back in 1986 (remember reviewer Bertram Carrot?) judged that *MM* has 'detailed analysis of accounts' and makes 'good use of screen displays and graphics'. The main reservation – a general one about accounts/personal finance packages – was to wonder how many people have the self-discipline to continue updating their figures after that initial surge of enthusiasm has gone.

We spoke to John Willrich of Southampton, who has been using *MM* for eighteen months and finds it immensely useful. Not only does he use it for keeping up to date with his own incomings and outgoings, but as an executor of a relative's will he found *MM* indispensable.

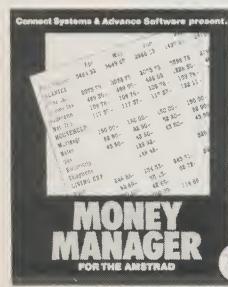

Recently John (who's 56 and works at the Motor Museum at Beaulieu) went on holiday to the States and decided to calculate just how much it had really cost him.

Using *MM*'s class code feature, which enables the user to sort by type, he discovered that he'd actually spent something like twice as much as he'd thought!

Although in general he's delighted with *MM*, there are two niggles he has: the column for entering the description of the item of expenditure could be a little larger; and once a reference – such as a cheque number – has been entered, it cannot be completely erased: something (a zero, for instance) must remain.

'Obviously you don't rush to your CPC every time you buy a stamp, but if you keep a record of your cheques and credit cards, standing orders and so on, you can keep a good track of how much money you really have left.'

All in all, John finds *Money Manager* 'super', but adds: 'It's only as good as you are. If you're prepared to stick with it, it's excellent. But if you're not, you might as well carry on working out your expenses on the back of an envelope!'

Mini Office II

Talk to Database, the people who produce the bestselling *Mini Office II*, and you'd think the CPC was going to make a late surge to take over the world. This combined word processor, database, spreadsheet, graphics, label printer and comms package has sold by the lorry-load.

When the enhanced version of *Mini Office* appeared in early 1986 it was claimed that 26 man-years had gone into the programming. Whatever

the truth behind that claim, the money was certainly well invested. It's sold in tens of thousands across a variety of formats – with Database claiming the unbelievable total of 400,000 total sales!

Now they've planned extensive advertising and offered an extra discount to dealers – which suggests a refreshing faith in the CPC marketplace.

Martyn Newman, 35, is Deputy Manager of Stockport's YMCA Information Technology Centre, and he has used *Mini Office II* to train YTS workers in basic computer literacy. For two years he took ten or a dozen trainees at a time on a City and Guilds Course developed in conjunction with the CBI – a course he has successfully sold to a number of YTS managing agents. If anyone knows *Mini Office II*, he does.

'It's a very robust package', he says: 'and while you get only what you pay for – as always! – it's very good value for money.'

'Of course, it has its limitations. When you're used to *Supercalc II*, as I am, a spreadsheet which is limited to so many columns and so many rows, and in which reformatting a sheet is so difficult, takes some getting used to. Similarly the database is restricted in that it's all memory based, dependent on RAM capacity rather than disk space.'

'But perhaps I'm not applying the correct standards here. *Mini Office II* is a tremendous package at the price – it can't be beat. And for people who've never touched a computer keyboard before – the people I'm teaching – it's an excellent tool.'

'It's like the CPC itself, really. For 80% of individuals and small firms it's ideal, especially if you haven't the funds to splash out £2000 or more on a business machine'.

Art for CPC's sake

Treasure Island first released *Parrotty* in late 1986, and *Plus* in May of last year. When we reviewed *The Informer* (AA33), the latest in the Treasure Island stable, Pat McDonald called it 'one of the most useful programs ever released for the CPC range'. But a dynamic program such as this is not far short of impossible to demonstrate without you seeing it in action, so **Merv Rogers** – who wrote the programs – has recently had the bright idea of boosting sales by selling a £3 demo disk of what this art/display package is capable of.

Barrie Knight of Mortimer, Berks, produces his Christmas cards using *Parrotty Plus*. The pattern was drawn on a FACIT 4550 A4 6-pen plotter, driven by a utility produced by Treasure Island. He's very happy with the results.

Among art packages, **Rainbird's Advanced Art Studio** is one of the best and certainly one of the most popular.

Martin Christmas, 25, who's in retail management, is very impressed. 'I use it, for example, for editing and printing out loading screens of games', he says. 'The only trouble I've found is getting to grips with the various colours – that took a while to master. And the pass-word protection, while I can understand why they did it, is a real pain. Still it's excellent value for money'.

Chris Raby, also 25, of Nelson has been using it for 18 months and still returns to it

regularly. 'It's exceptionally good', he says: 'My only complaint is that when you change between modes the picture you're working on tends to get scrambled'.

Benjamin Nugent agrees. Ben, 11, got it a year ago as a present (for passing an exam!), and still uses it 'quite often'. He sometimes loads in loading screens from games (*Paperboy* current favourite) and prints them out. He's impressed with the quality of print-out, though he wishes it had a greater magnification than 8x8, and hates typing in the password every time! All in all, he considers it one of his favourite pieces of software.

As does **Geoff Balding**, a postgraduate student. As a user rather than a programmer, he relies on other people's efforts, and when he read the consistently favourable reviews of *Advanced Art Studio* he decided there must be something to it.

'Getting used to the way it works takes some time', he says, 'especially the drop-down menus. But I'd used *Screen Designer* and *Melbourne Draw*, and this is better even than them'.

Any problems? 'Yes, one or two. Setting things up to do a hard copy isn't as easy as I'd like to be – especially with my printer (DMP2000)! Scaling is difficult, and you've usually got to try a few goes to get it right'.

Sounds good

Although the CPC's sound is not perhaps anything to write home about, in *The Advanced Music System* Rainbird have still managed to produce a popular and much appreciated package.

Scot Allan MacBain, 23, bought his about nine months ago. Even though his job as an Assistant Scientific Officer in the Civil Service doesn't allow him much time for such things, he's been putting musical scores onto CPC and adding the words underneath. He's a guitar player, and appreciates the opportunity this allows him to hear what songs should sound like.

'It needs getting used to', he says, 'but after two or three weeks you're away. Of course with only three channels you're never going to get great sound from the CPC, but that's a limitation you just learn to live with'.

And **Ben Nugent**, 11, whose instrument is the piano, is happy copying music onto computer, even if it is time consuming. He's still using it quite frequently after a year, and reckons anything that you're still using after that length of time must have something going for it!

Apologies to all those who sent photos, many of which were held up by the postal dispute. And perhaps the gentleman who sent in two large black and white photos in an envelope postmarked Ruislip might write and tell us who he is...

SOUNDS SPECIAL

Now you can be in harmony with your CPC – Pat McDonald takes centre stage and conducts a review

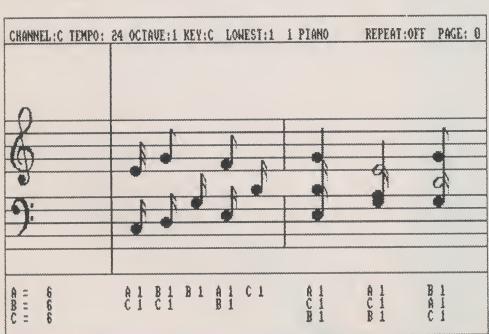

MICRO MUSIC CREATOR

First Byte Software • £9.95 tape, £14.95 disk, £24.95 ROM
71 Barn Glebe, Trowbridge, Wilts. BA14 7J2 • 0225 765086

First Byte Software is one of those low key, low budget operations that occasionally advertise in the AA Small Ads. That sort of pedigree isn't widely regarded as a hallmark of brilliance, so the question is: does this product have anything going for it?

Micro Music claims to let you compose your own pieces using up to three voices. All well and good – other programs have similar claims. But this one is special, in that you can play back your tune under interrupt, that is as a background task while you type in listings, write letters or whatever.

That's not all, because a sound sampler or digitizer is included too. That's hardware and/or (as in this case) some software that can pick sounds up from a tape played into the computer, analyse it and then reproduce it at a later date. The sound can be changed around, speeded up or slowed down and even played backwards. Theory the for much so (think about it!).

• If only you could hear this! (If only we couldn't – ed)

In practice

The tape/disk/ROM has a colour label, rather than a handwritten scrawl. Documentation for the product – an A4 manual – is good, though it's a pity it's photocopied rather than printed. An amendment sheet is included as well – tut tut!

You are presented with a menu of options featuring the above two functions, a sampled demonstration, a 'free' game and a help program. Selection is by number, and your Amstrad mumbles, shouts, squeaks, grunts or says that number when you press it.

Using the 'Compozer' (why spelt wrong?) is easy. I tried the usual test of attempting to use it without reading the manual, and it was a piece of cake compared to some of the other music programs around – a big achievement given its complexity.

Graphically you are presented with a central stave area, and a status line above and below. The top one reads: **Channel** (A to C), **Tempo** (value from 2-100), **Octave**, **Lowest** (note), **Piano** (which envelope selected), **Repeat** (On/Off), and **Page** (no.). The lowest window keeps track of the number of notes used in each channel – up to 500 in each – and indicates each note's channel and envelope value.

The musical stave is full height, so music can be transcribed across four octaves. Note values range from demisemiquaver to semibreve, which should cope with most musical pieces.

Dah dah dah DUMM

Putting music into the system is easy. The cursor can be moved to any part of the stave, and you use it to decide on the pitch of a note. Numerical keys 1-6 dictate the duration of the note. The

channel in which the notes is played can be changed either by using the numerical keypad or through a pull-down-menu.

Micro Music automatically scrolls when you reach the edge, and a faint shadow line is drawn to indicate overlapping pages. All bar lines have to be put in manually, but that will probably come in useful for irregular time signatures.

Envelopes can be edited and swapped around within a sub-program of the Compozer. This section is not well documented – understandable given the pages devoted to the subject in every CPC user manual.

For someone who's virtually tone-deaf, like me (*I'll second that – ed*), the program is informative. Certainly it can be used for ad-hoc education on the subject. I doubt if it will prove as popular as Rainbird's *Advanced Music System*, which can print pages out and has more features in general – but then again, that program doesn't have a sound sampler.

Singing CPC

The ROM version has a small idiosyncrasy – when the machine starts up, a sample of a manic laugh plays. An original start to anyone's working day...

The onscreen design is up to the same high standard of the rest of the page. The top part has two menus: when a sample is recorded, it is displayed in the middle/lower section as a series of vertical lines, apparently drawn at random. After messing about with the package for a while, it dawned that the start and end points of a sample were fairly easy to work out from this.

Using the package is so simple I'm only giving it one paragraph. First, you record a sound onto a tape. Then you select the **Record** option, and play the tape. Your CPC reads the sound into memory. After that you can edit where the sound begins and ends, change its speed and even play it backwards. The playback option can be used to check it's all going well. Sample standard is a bit hit and miss, and you'll need to experiment with sound level to get the clearest results. Permanently storing the sample on tape or disk is a cinch.

So what can you do with these weird and wonderful sounds? The manual explains how to play them from within your own programs, and your next version of Pac Man will knock spots off the competition – you can really hear the munching and gobbling noises... As an example, the 'free' game, *Empty Tummy*, is a really worthwhile little maze game, made special by the samples. Similarly, including musical compositions to play within a game (under interrupt!) is also well detailed in the manual. That makes *Micro Music* attractive to programmers – it's the one feature the competition, including AMS, lacks. For professional music composition, however, I'd still recommend the Rainbird package.

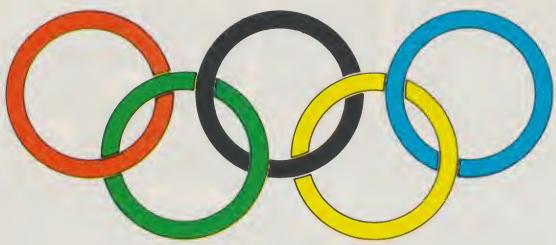

Most of the Amstrad owning population should go for *Micro Music Creator*. It's user-friendly, fast, has a large note capacity and the ability to sample. But above all it's a damn sight easier (and more fun!) to use.

GOOD NEWS

- Value for money.
- Sampler and free game.
- Sounds can be played while doing another task.
- Available on ROM.

BAD NEWS

- 'Compozer' lacks some features.

Will the Olympics come to Manchester?

The gold medalist of computer shows is on its way back to Manchester's imposing G-MEX centre.

Amstrad and more than 70 other exhibitors will be displaying the latest products for you to try before you buy.

Need some technical help? Leading experts will be on hand throughout the three days to answer all your queries.

With hundreds of special show offers available, every visitor could end up a financial winner.

You can even save yourself a £1 before you get there by using the advanced ticket order form.

How to get there

Driving? G-MEX is in the city centre - only one mile from the M602 - with ample parking available. It is also within easy reach of Victoria and Piccadilly railway stations, and Chorlton Street bus station.

WE WILL!

AMSTRAD ST.

Be prepared for a warm welcome in "Amstrad Street" - a brand new show feature area, specially constructed for the event.

Take a stroll down the street and see how Amstrad machines are playing a major role behind the scenes in the current northern boom.

- Drop in on the "Amstrad Arms" our answer to the "Rover's Return".
- Visit "Amstrad School" and observe how students in the north west are benefitting from the new technology.
- Check out what's going on in a local company where Amstrad machines are providing them with the competitive edge.
- Inspect the Amstrad innovation workshop.

And much, much more.

It will be an unforgettable experience.

Zenith Software offer you £3 off Z-Pack
If you order from them before November 30th,
Don't forget to enclose this coupon and say AA sent you!

HACK PACK

The complete Z80 machine code tool-pack, according to hack P. McD.

Z-PACK

Zenith Software • £10.95 disk • All CPC's • 11 Bude St, Appledore, Bideford, North Devon EX39 1PS

Sharper readers may have noticed a few ads for Z-Pack in AA over the past few months. Zenith is a small company based in out-of-the-way Bideford – but they could be going a long way, judging by Z-Pack, a new product aimed at the more serious enthusiast. It's a toolkit for examining the routines hidden away in machine code programs, and could well prove popular among those many people who enjoy hacking for fun and for *Cheat Mode*.

On the disk are two slightly different versions – one suitable for 64K machines, the other containing more features to explore the extra memory of a 128K machine. Enclosed with the disk is a small, A5 manual, printed rather than photocopied. Well written and informative, it explains well just what you get for your eleven quid.

• Taking a quick peek at the disk ROM

The memory of an editor

When you run Z-Pack, you are taken to the first option, **Memory Editor**. A bewildering array of information is placed onto the screen. Time to get the manual out to decipher it all... In a memory editor (we've printed some in AA) you have a pointer that indicates a particular byte in memory. Onscreen a list of the bytes is displayed, generally in Ascii as well as hexadecimal. Using the cursor keys increases or decreases the memory pointer, and the screen display scrolls to show the new memory locations.

Typing with the numbers 0-9 or the letters A-F (upper or lower case) alters the contents of the byte which the memory pointer is looking at. The memory pointer is automatically incremented, so that typing large amounts of data can be done at a fair old speed.

Using it is easy: you just scroll around looking for a likely piece of code. Ascii messages are easily seen, so changing program start up messages, high score tables and similar data is pretty simple. For the technical, pressing the **CLR** key toggles between interpreting bit 7 of the data and ignoring it. Similarly, **TAB** lets you alter the Ascii interpretation of the memory as opposed to the default hex.

Running across the top of the screen are some useful tidbits about the program. (If you're not into assembler they won't mean very much, and can safely be ignored.) First there's the version (64/128), update number and the address of the memory pointer. Next comes the byte's contents in hex and binary values, and then the address made by combining the present byte with the next byte in standard 'lo-hi' format, displayed in hex and decimal.

Once you have found some code to look at, the **disassemble** option is ready and waiting for you to start looking at it. The

While we're on the subject

More block commands to exploit are included, enabling you to Alter a series of bytes in a similar way, for instance dividing them by two or ANDing them with a bit mask. You can also Move blocks of memory around.

Searching for a given set of bytes is also possible, though it's a bit of a bind – the program defaults to hex, and Ascii characters must be preceded by a dollar sign.

Finally there are the Print/Save blocks, which behave much as the **disassemble** functions. They deal with bytes rather than assembly instructions however.

options available with this function are good: you can **semi** to **screen**, which means disassemble to an onscreen window: **Full** to **screen**, where you use the whole display for disassembly: **Block to printer** and **Block to disk**, where a file is sent to the relevant device. In the latter case, this could enable you to load the source code into an assembler – necessary for larger scale changes to code.

Actually marking a block out for the two previous features is no hassle. All you have to do is go to the start of where you wish to mark, press a key, then go to the end and press a key.

Of final note in the league of major features is the ROM/RAM selection. The lower ROM can be switched on and off, as can any of the upper ROM's, from 0-251. (If anyone actually has 251 upper ROMs connected, we would be delighted to hear from you. Four megabytes is, as we technical bods say, a *fair old bit of memory*.) If you have extra RAM banks these can be paged in on the 128K edition, and the screen base set to either the normal (49152) or lower (4000) setting. The manual's explanation of the extra memory, however, is disappointing.

Leftovers

Other commands have been included to help you control and understand Z-Pack better, including a help page, the ability to access nearly all the Amsdos commands (exception=USER), start execution of a machine code program, set the memory pointer without endlessly scrolling the text, and so on. Breakpoints are also implemented, although they are not conditional.

Most interesting among these is a rather nifty hex calculator. How often, when machine code programming, do you reach for a pencil and paper to do a quick sum? Not only can Z-Pack add, subtract, divide and multiply but it can also perform logical operations – **OR**, **AND** and **XOR**. The answer is displayed in hex, decimal and binary. This function is genuinely useful, and it's the first time I've seen it in a disassembler.

Without doubt this is one of the best disassemblers around. The screen update is fast, the disassembler can scroll up as well as down and the calculator saves messing about. Z-Pack lacks conditional breakpoints, however, which can be vital, and it takes a lot of memory – around 10K. It can't break into machine code on its own – other programs must be written or bought for that. Any chance of a ROM or Multiface version, Zenith?

GOOD NEWS

- Fast, easy to use, soundly priced and good manual.

BAD NEWS

- Non-conditional breakpoints.
- Breaking into programs is your own problem.

WORDS WORK

Pat McDonald celebrates the timely end to the postal dispute

What's that familiar shape striding through the morning gloom? Can it be, yes it is, a postie! Carrying a huge sack, wow hasn't Christmas come early this year. One problem - all the letters are marked Words Work. In the absence of anyone of that name, I suppose I'd better open them...

Enquiry

Have you ever reviewed Microfile/Microword in your magazine? They came as part of the package when I bought my CPC6128 and I wondered how it compared with other word-processors and databases. Looking back through my old magazines I can only find one mention of it in a reader's letter.

I am new to computing (no printer to try them on until the end of the month) but I found both programs reasonably easy to use, and I would like a spelling checker that would work with it. Do you know of one? Or would I be better off buying a new system?

Margaret Hague, Rotherham

We reviewed Microfile in AA9. In short, it stated that the program was good from a beginner's point of view. It had a

well written manual and was quite easy to use. It lacked sophistication, but was a good starting point. I'm unsure whether that is the same as what you are referring to - it was by Cornix software.

Prospell, the spell checker from Arnor (0733 239011) costs £24.95 on disk or £34.95 on ROM chip, and works well with most word-processors.

Inspiration

For months, since I got my Copal SC-1000 printer (secondhand and without instructions), I've tried to fathom out how to do underlining. I guess the machine is capable as it has the sophistication of proportional spacing so surely must have the everyday 'common-or-garden' underline! I've tried all codes with no luck at all.

Suddenly I've hit upon an alternative successful idea. Sending 27 51 x sets the line spacing to x/216 of an inch. I tried sending zero, and - you've guessed - the print head stayed where it was. I can then send the usual underline character (you know: shifted 0) as the next line. It works a treat. Then use 27 51 36 to revert to normal. The same trick can be used for double strike by holding the line spacing and repeating the same line

of data.

It's a relatively simple matter to alter word-processor printer control codes - two are necessary for the above. In Tasword go to the Customize program option, and reply Y when it asks if you want to change the printer control codes.

Great stuff for a beginner, eh? Of course, if anyone can out there can supply the genuine codes for the Copal, that would be better still.

Jeff Ison, London

C'mon everybody!

Words Work is hugely popular. So if you want thousands of people up and down the country to laugh at, criticise, or (the majority) appreciate your word-processing tips and problems, send them in!

We want your mail! This section of the magazine depends on you. Get your contributions sprinting towards:

Bath BA1 1EJ

Write on

The cheapest printer on the market is the Citizen 120D, which I used for 18 months or so until I moved upwards (?). It is quite fast, printing a packed page of text of 4000 characters or so at a measured 19 cps in pica and 21 in elite. It boasts a good range of facilities: IBM characters, 8 bit control codes to use them, double height and reverse print, auto-feed for single sheet and a very good handbook. It costs around £140, including VAT - but you'll have to look hard for them.

The only sour note is the NLQ, which at least is better than the DMP2000/3000. (Then again, there's not a lot that isn't - Pat.)

Of the 24-pin machines, the NEC P2200 is worth investigating.

Compared with the Amstrad LQ3500, it is faster, has better print quality, more facilities, is easier to use and has a much better handbook. At around £350, it sells at much the same price as the Amstrad.

I strongly advise anyone buying a printer to shop around and, most importantly, try one running in a shop. Run a page of text through it and time the result. The effective speed of many printers is much less than claimed, and I encountered one which ran at little more than half its alleged speed. Check from the handbook, or better still by running test pieces through it.

Also check the facilities it has and whether they work in

NLQ as well as draft. Quite often they don't. If you're looking at an LC10, do make sure that it works with the CPC - some earlier ones didn't.

If the printer can recognise the eighth bit toggle codes, as most do, there is little need for the KDS port. I have been producing the IBM characters for the past two years or so without any need for it. The device is valuable when data is being sent to the printer, rather than characters.

One instance is in redefining character shapes. With the standard CPC, only the bottom seven characters can be defined. Using an 8 bit printer port all of the top eight bits and the bottom one can be selected. (That's why redefined characters with only seven bits appear two rows below normal text.)

However, 8 bit printer ports come into their own when used with print enhancers (such as Qualitas). The reason for this is that such products (and screen dumping programs as well) use graphics, which are unaffected by the eighth bit toggle.

M Catton, Gosport

That's one reason why I don't like the Citizen 120D. The graphics commands are non-standard: many readers write in asking for special screen dump programs. Unfortunately they never give details of their printer's graphic codes...

Mind you, from a word processing point of view, it's an acceptable printer.

That's the way you do it

In September's Reaction, R. Corbett seemed to have a problem with his *Tasword 464*. Your answer, unfortunately, was incorrect. It is nothing to do with the 6128's memory; it's the disk drive. I had this same problem with my *Amsword* when I purchased the DDI-1 disk drive and tried to transfer it to disk. When the Basic program loaded into memory, it came across the **|DISC** command in line 130 and switched to disk operation, then tried to load the **TASWORD.BIN** plus **AMSWORD.BIN** programs from disk. There are no files with this name on the disk, so it comes up with the error.

The answer is to load the Basic loader and delete the **|DISC** command (you could **REM** it if you have Basic 1.1 but the 464 will not allow you to use a **REM** statement), and then run it. When the machine code is loaded and run, return to Basic, add the **|disc** command back again, type **RUN**, and select 'SAVE Tasword (or SAVE Amsword)' – it should save to disk.

By the way, *Tasword 464* does run on the 6128, although it does not use the extra 64K available. If you want to upgrade to *Tasword 6128* from *Tasword 464*, then send Tasman £13.90, plus your *Tasword 464/Amsword* tape. They will return the tape, together with *Tasword 6128*.

As I'm in such a generous mood, I feel that I can help Stephen Godrich with his disk drive. I had exactly the same problem – although it was all my own fault. Playing with the sector editor given away free with the Christmas cover tape, I discovered how

to copy sectors from one disk to another. So I did this with my free copy of *Matchday II* from your subscription offer – I copied the bootstrap program (Track &090, Sector 41) onto a blank vendor disk.

Then, being such an idiot, I ran this (by typing **|CPM**) and my drive made the most horrendous noise. After that it wouldn't load anything. As you may have guessed I was not too pleased since I had bought it just two weeks before!

Now this is the good part – how I recovered the drive! I put a CP/M 2.2 system disk into the drive and typed **|CPM** – the motor started but nothing else happened. So I hit the top of the drive with my wrist. Suddenly it worked! It wasn't just the drive either – I did it twice! Don't ask me how it works – I don't know!

Could you help me on one small point? I bought the VDE 2.31 text editor from WACCI. As you may know it is configured to run from CPM+, but the **VDE.DOC** tells me that it will run under CP/M 2.2.

Using VINST23, I have made it run reasonably but I can't find the codes for 'Scroll up a line' and 'Scroll down a line' for the CP/M 2.2 operating system – it's not in the DDI-1 disk drive manual.

Martin Bullivant, Altringham

Sounds like you may have worked a screw loose somewhere in the drive. I remember having to tighten a screw on the external drive occasionally: vibration loosens it regularly.

AA CASSETTE UPDATE

Tan Kwong Peng of Singapore contributed a rather useful disk formatter program, which could restore disks with bad sectors to full health, to last month's cover tape. The tape was of course tested before being sent to the duplicators. The program consisted of a helpfile, a Basic program file and a machine code program that was used to do clever things to the disk operating system.

The three filenames were: **FORMHELP.BAS**, **FORMPROG.BAS** and **FV.BIN**. Unfortunately, on some copies of the tape the last one was saved by the duplicators onto a tape master using:–

SAVE "FV.BIN",B,&8000,&(110:filename length truncated it.)

Instead of: **SAVE "FV.BIN",B,&A000,&110**. This has resulted in the Basic program **FORMPROG.BAS** being saved again. Bit of a mess up, in fact, and while it was the duplicator's fault we still feel bad about it.

So what can you do?

What you can do

Either: type in this program, and save it onto the tape at the point where the bad file begins. **Or:** send it to Interceptor Ltd, Mercury House, Calleva Park, Aldermaston, Berks RG7 4QV and have it replaced. **But please please please remember to include your name and address so we know who to return it to!** We've already had some people destined to be disappointed because they omitted to let us have this vital bit of information.

BAR CPM

First Steps – part three with Richard Monteiro

Winners of Graduate's goodies will be announced next month. Due to the postal strike the competition entries have only just started to arrive. So come on, you have several more weeks to write your name and address on a postcard or back of an envelope and send it to: **Richard Monteiro's Bar CPM on ROM, Amstrad Action, 4 Queen Street, Bath, BA1 1EJ.**

What do you mean you didn't read the October issue (ahem, September mark II (yes, OK Monteiro – ed)) of Bar CPM and haven't a clue what we are talking about? What were you doing? The prizes on offer are 10 vouchers worth £5 off any of Graduate's products and a totally spondititious copy of CPM on ROM.

DIR is just scraping the surface of CPM's built-in commands. There are five (six in CPM Plus) so-called built-in commands. Many other transient commands exist. Transient commands reside on the system disk and are loaded in and executed when needed. Built-in commands are part of CPM and are always available for your use regardless of which disk you have in the drive. Built-in commands reside in memory as part of CPM and consequently execute faster than transient commands.

Those are the built-in CPM commands. Get used to them: you're going to hear a lot more about them.

We've done DIR to death, so moving down the list we have DIRSYS. (This command isn't available to CPM 2.2 users, but the transient command STAT is. This allows you to do everything DIRSYS manages plus a whole lot more.) Most built-in CPM Plus commands can be abbreviated to the first three characters – four in DIRSYS's case.

Typing DIRSYS, or DIRS, at the A> prompt causes the computer to display all files tagged with the SYS attribute. These files are normally hidden to the standard system and aren't shown when DIR (or even Basic's CAT) is issued.

ERA next. To use this command you have to copy your CPM system disk. CPM Plus users use DISCKIT3. 2.2 fans use DISCCOPY (if you have two drives then use COPYDISK). Full instructions for copying disks are in the User Instructions – check them out before doing anything.

Put the copied CPM system disk in the drive and start CPM. **What you are about to do is irreversible. Make sure you are using a backup of your system disk!** Type DIR at the prompt and hit Return. You should see a display of all the files on the disk. You're going to get rid of some of them. ERA does the job: it

DIR

Catalogues a disk. All filenames are displayed except those marked with a SYS attribute.

DIRSYS*

Displays filenames with SYS attribute.

ERA+

Erases a given file or sequence of files from disk.

REN-

Allows you to change the name of a file.

TYPE

Renders the contents of an Ascii file on your screen.

USER

Changes the active user area.

* CPM Plus only.

+ CPM Plus version is ERASE

- CPM Plus version is RENAME

Line-editing control characters

Anything entered after the A> prompt is known as a command line. Using Control-plus-key sequences it is possible to perform time-saving edits on the information entered after the prompt. For instance, the cursor can be moved left or right through the line, characters to the left of the cur-

sor can be deleted, the previous command can be recalled and so on. CPM Plus naturally has many more of these short-cuts. These sequences are guaranteed to be on every version of 2.2 or Plus on any micro; keys other than the QWERTY standard are not.

Here is what's available:

Key sequence	Effect
Control-A*	Moves the cursor one position to the left.
Control-B*	Places cursor at the beginning of the line without effecting the contents of the line. Cursor is moved to the end of the line if it was originally at the beginning.
Control-C	Special one this. It is used to log-on new disks. Particularly important in CPM 2.2. If this operation isn't carried out once a new disk has been inserted, 2.2 can get very confused. Also used for breaking out of programs or transient commands.
Control-E	Forces a carriage return, but does not inform CPM. Sneaky.
Control-F*	Moves the cursor one character to the right.
Control-G*	Deletes the character under the cursor.
Control-H	Erases a character and moves the cursor left by one position.
Control-I	Places the cursor at the next tab stop.
Control-J	Has the same effect as Return (Enter) or Control-M.
Control-K*	Deletes to the end of the line from the cursor.
Control-M	Return.
Control-R	Places a hash at the current cursor location, moves the cursor to the next line and redispays any text typed in so far.
Control-U	Discards all characters in the command line, places a hash at the current cursor position and moves the cursor to the next line.
Control-W*	Recalls the previously entered command.
Control-X	Discards all characters to the left of the cursor and moves the cursor to the beginning of the line.

* Not available for CPM 2.2 line-editing, although other software may use the key sequences described here.

erases files. Be warned: once files have been erased you can't get them back. CPM 2.2 users enter ERA AMSDOS.COM and press Return. CPM Plus users enter ERA SAVE.COM and press Return.

Now type DIR, and you find that the files have gone – for good!

Well, that's more than enough drama for one month. Drop in next issue when you'll find out how to erase lots of files in one go. And also how to change file names. Can you wait?

HOT TIPS

Tips, get your tips here

ROM not on

Recently I bought A DDI-1 disk drive for my 464. Within minutes of plugging it in to my Rombo romboard I found that when I typed CAT or some similar command the disk drive catalogue was corrupted. I tried cleaning the connectors - no luck. It got to the stage where the computer crashed if I tried to access an Amsdos format disk (I also have Rodos, which performed perfectly).

Eventually I had the idea that the signals from the disk

ROM were somehow being corrupted by the rather old Rombo. So I carefully opened the disk interface and removed the disk ROM (marked AMSTRAD 40015) and refitted it into socket number seven in my Rombo. After reconnection the problem ceased. What bliss!

Matt Cawley, Deeside

Yes, it could have been caused by the Rombo, but a more likely explanation is that the DDI-1 Rom slot was either underpowered or had a dry solder joint somewhere.

Pot pourri

Some tips for the *Micro Music Creator* (reviewed in this very issue - we don't hang about here on AA!). To turn the 'music repeat' on or off, the manual quotes two rather obscure pokes. Contained within the ROM version are two RSX's that do the same job - these are |REPON and |REPOFF.

Do you want your GAC adventure to look like an Infocom one? It's quite simple - use embedded control codes. First, switch off graphics. At the beginning of the adventure, in the description of the first room, insert the following characters: CTRL-D, 2, (SPACE). You can use simi-

lar techniques for messages. Suppose you wanted to highlight a message. Put CTRL-X, your message and finally another CTRL-X. Try exploring the codes described in your manual for the various effects possible. (464 Ch9 P2, 664 + 6128 Ch7 P3).

When editing a program using the cursor keys, pressing CTRL as well moves the cursor to the very edge of the line in that direction.

James Pinto, Hook

Errors - what errors?

In AA36, Type-Ins printed my variable list. Soon afterwards I got a letter from someone who typed the proggy in to be confronted with **Type Mismatch**. He'd typed **od** instead of **0d**. I sent him instructions to check for **0s** and **os** in the data, which others may find useful when typing machine code data.

1 Enter **SYMBOL AFTER 79**. If the machine says **Improper argument**, cry, because you'll have to do it by hand.

- 2 Type **SYMBOL 79,170,85,170,85,170,85,170,85:SYMBOL 111,170,85,170,85,170,85,170,85**
- 3 List the data. Any **0s** or **os** will be replaced by a graphic symbol of dots.
- 4 Alter the mistakes and type **SYMBOL AFTER 240**
Alternatively, before typing data type the following:
KEY 141,"Error":KEY DEF 34,1,141,141
Any **os** entered accidentally will be printed as **Error**.

Byte oversight

Thank you for publishing my tip in AA36, titled 'The great bank heist'.

Unfortunately there was one small error at the top of the second column. The four bytes to be typed into **&8000** should be
00,80,8C,C0
and not
0,80,0C,C0.

CL Naylor, Penparc

Replacing Honeyview

The 32K ROM in the Amstrad RS232 interface occupies four ROM slots (that's what I call bad design). Many people find the *Honeyview* Viewdata emulator rather limited, and turn to the *Cage Comms ROM* instead. If you want to keep on using *Honeyterm* for scrolling services, you have to keep this 32K device plugged in, gobbling up four slots, because it won't fit into a conventional ROM board...

Well, for a start you can if you own a Rombo device, because pin 27 on that is connected to Vcc. This always selects the upper part of the ROM anyway, i.e. *Honeyterm*.

Problems arise when using a ROM board which leaves pin 27 unconnected to any voltage, such as the Britannia Super ROM plus. What you do is to get a 28 pin IC socket. Solder pin 27 to pin 28, using *as little solder as possible*. Make sure the connection is right up next to the plastic body. Now plug that into a ROM socket, and stick the Commstar ROM into the doctored socket. Use all the usual anti-static precautions while doing this.

When you switch the computer back on, the ROM will log on as *Commstar ROM 2*, and you can call up *Honeyterm* by typing **|HT**.

Mike Brown, Liverpool

KEY DEF 34,1,111,79

The above will return to printing **os**.

M Gledhill, Tavistock

ACTION TEST

And to review them - heeere's Gary!

We kick off with the CPC version of the second in the *Star Wars* series - and some bad news for Domark.

Raves this month include *The Train* and *Vindicator*. But

what about Mastergame? There isn't one, that's what!

There are some neat compilations out (p. 49) and some genuine turkeys - but perhaps we should leave you to find them...

THE EMPIRE STRIKES BACK

Domark • £9.95 cass, £14.95 disk
joystick/keys

Long ago, in the early years of the second age... (that doesn't sound right) ah yes... Long, long ago in a galaxy far, far away (that's better) there was a movie called *Star Wars* (OK, it was Earth 1977). The film did megabucks at the box office and subsequently, inevitably, there was a sequel, *The Empire Strikes Back*. Arcade games appeared of both films and furthermore *Star Wars* came out for the CPC, but not in that great a version. Now *The Empire Strikes Back* has arrived. Have they done a better job this time?

Most of the screen is taken up with a view through your cockpit and the rest is a status area. The evil forces of the Empire are viewed in 3D vector graphics as they attack. The status area has the number of shields, score, wave number and the number of enemies to shoot. You have five shields to begin with and death results when they disappear.

The sequence of events loosely follows the plot of the early part of the film. There are four stages: probots, imperial walkers, tie fighter attack and the asteroid belt. In the probot stage you have to stop a message reaching Darth Vader which informs him of the rebel

bases location. To do this you have to blast the messages as they leave the probot, and destroy incoming fire and the probots themselves. Eventually the message does get through and it's time to blast the walkers. There are two sorts of walker: AT-ST's and AT-AT's. AT-ST's are small bipedal attack craft that are easy to destroy. AT-AT's are much bigger and more tricky, but you can fly through their legs for bonus points.

Stage three is a blast-the-tie-fighter sequence similar to the Death Star approach in *Star Wars* and the asteroid

SECOND OPINION

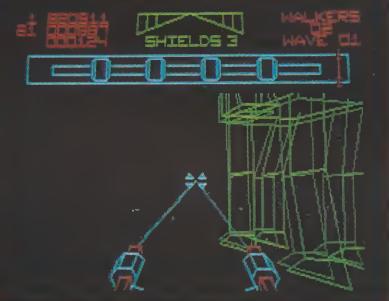

"Here we go again, saving the universe by taking on some rather basic bad guys, who look like they come from an etch-a-sketch factory.

The problems with Empire are that it has poor design, not enough stages, is too easy and occasionally crashes. Save your energy for a more intellectual pastime. Like fly swatting." PbM

GREEN SCREEN VIEW: OK

belt is a matter of dodging out of the way of the big rocks that hurtle towards you. If you complete a specific task in each stage you're awarded a JEDI letter and if you collect all four you become temporarily invulnerable to enemy fire.

There are three difficulty levels and a rebel instruction manual, which just gives you a bit of information on the enemy that you're about to face. The vector graphics move a little slowly and there's some flicker. Colour is not used very well either, there being only a handful on screen at any one time. Fast vector graphics are essential in a game of this type and unfortunately they're absent. A good tune plays throughout the game, but sound is simple and ineffective.

• An AT-AT just inviting you fly through its legs

A couple of years ago this would have been a good game, but it looks dated badly. It's an improvement on *Star Wars*, but the lack of speed lets it down considerably, because fast reactions is what the *Star Wars* games are all about. What will they do with *Return of the Jedi*? GBH

FIRST DAY TARGET

Complete wave four

The Verdict

GRAPHICS 47%

- Vector graphics are a little slow.
- Some flicker too.

SONICS 58%

- Very good continuous tune.

GRAB FACTOR 55%

- Easy level to get you going.
- Little variation from stage to stage: just the enemies change.

STAYING POWER 48%

- Three difficulty levels.
- Too easy, even on hard.

AA RATING 51%

- You'll get more fun hiring the video.

GAME OVER II

Dinamic • £8.95 cass, £12.95 disk
• joystick/keys

Game Over was favourably reviewed in AA25, and now (with similarly subtle artwork – why is the software industry so sexist?) here comes the sequel. As a bonus – and a substantial one at that – you get Game Over free.

At the end of Game Over, devotees may recall, the hero Arkos had defeated the evil Gremla and there were wild parties everywhere that lasted as late as, ooh, half past seven. Unfortunately in the

• Approaching Phantis

general merry-making the hero was forgotten about and when no-one was looking he was captured by Gremla's heirs. Poor old Arkos was shipped off to the terrible prison planet of Phantis and shoved into a deep, dark dungeon to rot. Letting the hero die is not really on, however, and a rescue mission is launched by yet another hero (go on, guess).

There are two different parts to the game, loaded separately, and a

password – which you get by completing part one – is required to enter part two. Part one is divided into four phases: approach, volcanic, underground and swamps.

Bonus lives are awarded every 25,000 points and you're gonna need them to

• Low-flying magma

get far. In the approach to Phantis you encounter the suicidal hordes who fly and shoot at you, and they're definitely not aiming to miss. Asteroids are just as deadly, but like the enemy ships they can be blasted with some well aimed laser bolts.

After flying along for a while you reach the area of volcanic activity in which balls of magma, bombers and missiles endeavour to destroy you and then reach the underground cavern and its snaky occupants. Three shots in the head are needed to brain the serpents. Phase four is just after landing in the swamp infested landscape. After capturing Adrec you can ride around stabbing at bad guys with your photonic blade and eventually you get the password to the second half of Game Over.

Now you have six levels to pass through before reaching the prison cell: surface, alien base, underground forest, inner lake, magma and prison. The planets surface is very mountainous and is occupied by some not so friendly aliens

called the Pelotrones. They die with the aid of your own rebel Pelotrone. Once you're inside the alien base you have to take control of the Ionic turbo laser and its proton loader to arm you to full power. Hidden in the underground forest is a

• Riding on your Adrec

medallion which you need to open the Blue door that leads into the inner lake. Piranhas and dinosaurs lurk beneath the hot waters and care has to be taken as you head towards the heliport.

Once inside the helicopter you have to fly through a hazardous cavern filled with molten rock and you finally reach the prison level.

Some little devils are guarding the prison and once they've been dispatched your mission's over.

SECOND OPINION

"Some really nifty graphics on this one, really mean for the CPC. The gameplay is pretty frantic at first: you'll need a good joystick. Far too easy though. More! More!"

Pbm

GREEN SCREEN VIEW:
Bad choice of colours makes things tricky to see

A pleasant little tune (if a bit tinny) plays on the title screen, but there isn't one during the game itself. Sound effects are alright, though they too are a bit on the tinny side. Horizontal scrolling is fine and there's plenty of colour, although a large portion of it is blue. Green screen players, may have occasional problems seeing things.

Game Over was fun shoot-em-up, and this is a good game too. Getting the original and a sequel makes it good value for money if you haven't already got Game Over, and it's not so bad on its own anyway. My only doubt is the difficulty factor: your first few games will be short lived, but it doesn't take long to get to the end of the first part of the game. Worth a look, without a doubt.

GBH

FIRST DAY TARGET:
Complete part one

The Verdict

GRAPHICS 65%

- Smooth horizontal scrolling.
- A bit too blue.

SONICS 56%

- Reasonable title tune.
- Tinny effects.

GRAB FACTOR 69%

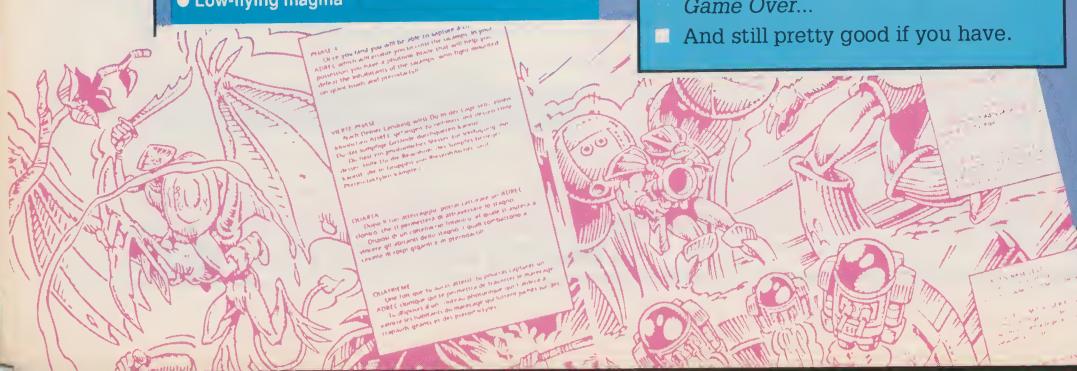

- Too difficult at first.
- Free copy of Game Over on the flip side.

STAYING POWER 63%

- Two parts to each of two games.
- Not that difficult to complete with practice.

AA RATING 69%

- Great value if you haven't got Game Over...
- And still pretty good if you have.

VINDICATOR

Imagine • £8.95 cass, £14.95 disk
• joystick/keys

A poor defenceless insignificant little planet, known as Earth (what a dull name!) is yet again under attack from hostile alien forces. You, the Vindicator, stand between alien domination and victory for the Earth. You've managed to infiltrate the alien fortress and now all you have to do is to find the hidden bomb components and blow the aliens into little pieces.

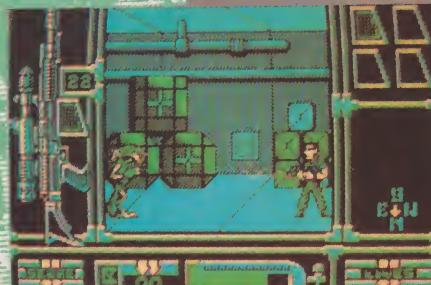

• A stupid alien...

In the centre of the screen is the playing area with various other bits around it. An oxy-gum indicator, your lives and score are at the bottom of the screen. On the left is a gun symbol with a figure to show how much ammunition is in it and to the right are your magazines, a display of objects carried and compass direction.

The bomb components are hidden within the four level complex, each level being a maze of passageways. Doors lead into rooms which contain computers, ammunition, lift passes, oxy-gum or computer passes. The last four are generally guarded by aliens who come in two flavours: stupid and mean. (All resemblance to AA staff living or comatose is purely intentional - ed.)

To access a computer you need a computer pass. An anagram is displayed and you have to solve it in order to get hold of

• And a mean one

the map showing your position and the location of a bomb bit. Lift passes are needed to move between floors and oxy-gum is essential to stop the toxic atmos-

sphere killing you. Oxy-gum keeps you alive for a limited time and when it starts to run out you need to find more.

Stupid aliens always shoot at the same height, so duck and they miss: but the mean ones fire directly at you no matter where you stand. When they die they drop any equipment that was on them and you can pick it up. Mean aliens take more shots to kill and the different magazines that can be loaded into the guns come in a variety of powers. More powerful ammunition finishes off the bad guys quicker.

SECOND OPINION

"The graphics look really terrific – even if they're a little bland. In a weird way this helps create a gloomier atmosphere – as does the sound."

I liked playing this game a great deal, but I have to admit the controls got right up my nose. Why on earth didn't they have simple left/right/up/down? It's too complicated and you find it doesn't work 'naturally'.

The difficulty level is just right, and I'll be playing this for a good few evenings to come."

PBM

GREEN SCREEN VIEW:

There's lots of green on the colour version, so no problem

After escaping from the maze and getting all the parts of the bomb you go for a fly and take on the mechanised legions of aliens. More aliens await your destructive powers in a jeep race across the land and finally you enter the catacombs where the Giant Guardian must be defeated. Passwords allow you to go to the later stages of the game, avoiding the tedium of having to complete stage one all over again.

An atmospheric tune plays on the title screen and throughout the game, and another plays briefly before the action starts. Sound effects are adequate. Sprites are large and well animated with colour used reasonably well, though it would have been better if there were more.

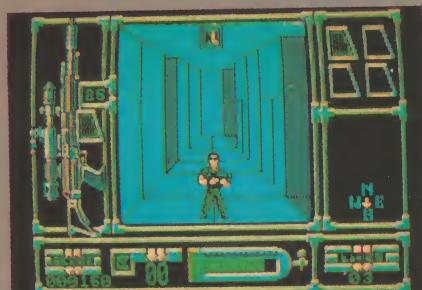

Though it's not the most sophisticated

• The computer room

program ever it does at least have some variety. The anagrams may not be difficult to solve (MALEK MIB=MIKE LAMB), but it gives you something to think about for a while instead of just blasting everything. It gets confusing when you push the joystick up because you turn through 180° and if you don't keep an eye on the compass you're soon lost and very disorientated. Apart from that it's a pretty good game with plenty of action to keep you playing for weeks.

GBH

FIRST DAY TARGET:
Complete stage 1

• Wandering down a corridor trying not to get lost

The Verdict**GRAPHICS 82%**

- Large, well animated sprites.
- A little too green for my taste.

SONICS 36%

- Excellent tune plays throughout the game.

GRAB FACTOR 77%

- Puzzles to solve as well as some not very mindless blasting.
- Initially very confusing with the 180° rotation.

STAYING POWER 83%

- Three stages to complete, with the action varying in each one.
- First stage in the maze is disorientating and tricky to complete.

AA RATING 74%

- A good mix of puzzles and action make a good game.

GOLD, SILVER, BRONZE

Epyx • £14.95 (3 cass), £24.99 (3 disk)
• joystick/keys

Winter Games was first reviewed way back in AA9 and won a Rave. Now it has returned in a bumper sporting bundle complete with *Summer Games* and *Summer Games II* – neither of which has previously appeared on CPC.

All three come on separate disks/tapes and the events are loaded individually. There are 23 events, eight in each of *Summer Games* and *Summer Games II*, and seven in *Winter Games*.

With each of the three games you have a menu of options that consist of: Compete in all events, Compete in one event, Practice, See world records, Controls and Opening ceremonies. The opening ceremonies are pointless but a nice touch nonetheless and the controls

SECOND OPINION

"Winter Games was one of my favourite waggling compendiums, and I'm pleased to see it again. Summer Games also comes up to the same high standard in its graphics and game-play, though the sound isn't quite in the same class. Summer Games II is the runt of the litter, and appears rushed, with some very poor graphics and dull content."

I suppose at the price it's reasonable value, but I doubt many will be attracted to the idea of committing themselves so heavily to one theme. If you get this little heap home and find you don't like what you see you're in trouble!

The fact is, however, that most people who do buy Gold, Silver, Bronze will feel happy with their purchase." PbM

GREEN SCREEN VIEW:
A winner

• The Bobsled in *Winter Games*

• Equestrian from *Summer Games II*

• Landing on your head in *Summer Games*

option allows you to redefine the keys. It's best to use practice first to get you used to each of the events and then go for play one event. When you think you're ready you can go for the whole thing and play all events. If you do well enough then you get into the world records.

Up to four people can play and before you start you have to enter your name and choose a country. *Summer Games* consists of the pole vault, diving, 4X400m relay, 100m dash, gymnastics, freestyle relay, 100m freestyle and skeet shooting; *Summer Games II* has the triple jump, rowing, kayaking, javelin, high jump, fencing, cycling and equestrian; and *Winter Games* has figure skating, free skating, speed skating, hot dog aerials (ski stunts), ski jump, biathlon and bob sled. All that lot should be enough to exercise the most chair-happy of athletes!

Few of the events are wobble games and different approaches are needed to complete each. Many rely on you getting into the rhythm and moving the joystick in a particular pattern, whether left/right, up/down or even in a circular motion. Other events require fast reactions – such as the skeet shoot, for example, in which you have to hit clay pigeons (I didn't know pigeons were round and flat!).

Winter Games has the best graphics by far, but the graphics in the other two games are still pretty good. Some of the animation is a bit flickery and the graphics are a little small in the the two *Summer Games*, but there are no such problems with *Winter Games*. The national anthems of the country you represent are played well and there's also a good tune on the opening ceremony. Sound effects are terrific too.

Because of the vast price difference there should really be two ratings for this game, one on tape and the other on disk.

£25 for a CPC disk game is a lot of money – it's more expensive than most 16 bit software. There are three disks, but that's not enough of an excuse. The problem with multi-load games of this type, though, is that a disk version is almost essential – unless you don't mind spending more time loading than playing the game.

Lots of events, plenty of variation and loads of money. GBH

FIRST DAY TARGET:
Get into the world records list for all events in one game

The Verdict

GRAPHICS 68%

- Winter Games still has excellent graphics, even after two years.
- Other graphics are not up to the same standard.

SONICS 56%

- Some excellent tunes in all three games.

GRAB FACTOR 64%

- Competing against other players adds to the enjoyment
- Boring with only one player.

STAYING POWER 71%

- Loads of different events to play.
- Irritating pauses when waiting to load from tape.

AA RATING 66%

- Multi-load on cassette and high price on disk are severe disadvantages.

ROAD BLASTERS

US Gold • £9.99 cass, £14.99 disk
• joystick/keys

Yet another arcade coin-op game has been transferred to the humble home micro by US Gold. The setting is the distant future where rally-type races are all the rage. There is a deadly difference between these rallies and the twentieth century variety, in that your car is armed and you are free to blast your opponents off the road. (*M25 commuters sign here.*)

Your car sits on the roadway – which comes out of the screen towards you –

● Approaching a checkpoint

and there's a panel at the bottom with vital information on speed, fuel and, of course, your score. The fuel gauge is divided into main and reserve, the main tank being used until it runs out, at which point the reserve tank is switched in. Run out of fuel and you lose a life and when all lives are gone it's game over.

Your objective is to pass through all the checkpoints of the stage and continue onto the next one. In all there are 50 stages to go through and the hazards on each, as you'd expect, get progressively more frequent and deadly.

As you go for your casual 180 mph Sunday afternoon drive through the countryside you encounter other vehicles out passing time. They come in four varieties: **stingers**, **command cars**, **rat jeeps** and **cycles**. Ask them politely to get out of your way: pull your trigger and watch them go up in a ball of flame. Take care you don't collide with them though, because if you do you'll join in the flaming fun too. There are also some static hazards on the roads – mines, gun turrets, spikers and toxic spills.

● The support jet brings in an extra weapon for you

The Opposition

Stingers: lightly armoured cars despatched easily with a burst of machine gun fire. Worth 50 points.

Command Cars: heavily armoured, almost tank-like vehicles that need a cruise missile to destroy them. 100 points is your reward for their destruction.

Rat Jeeps: fast moving and evasive little guys. 50 points.

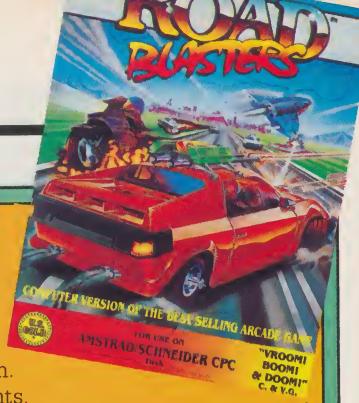

Cycles: the fastest moving and most evasive of your opponents. Because they're so difficult to hit they're 100 points worth.

Mines: to be avoided, otherwise you go boom.

Gun Turrets: fire as you approach. Only takes one hit to destroy the car. Can be blasted off the edge of the road.

Spikers: as deadly as mines and they're thrown off your opponents' vehicles while they're in front of you.

Toxic spills: to be avoided whenever possible.

COMPUTER VERSION OF THE DEA SELLING ARCADE GAME
AMSTRAD SCHNEIDER CPC
"VROOM! BOOM! C.R.O.C."

● Armoured cars are tricky to destroy

Not everything on the road is quite so deadly: you come across fuel occasionally – vital if you hope to reach the end of the stage. Help in another form is provided by a support jet that flies over at times and drops weapons onto you. If you catch them you stand a better chance of dealing with your opponents. The weapons are: **cruise missiles**, **nitro injectors**, **cannons** and **shields**. Crash and you lose any extra weaponry.

SECOND OPINION

"It's a racing shoot-em-up, really, and that's all there is to it. Like them and you'll like it, though I tend to think it does nothing Overlander didn't do better. If what you're after is good, old-fashioned mindless mayhem at a fair old lick, then Road Blasters should keep you in joystick cramp for quite a while, though when you're away from it you don't find yourself playing it in your mind all that much. And perhaps that's what makes a really good game – when it won't let you alone."

SC

GREEN SCREEN VIEW:
Fine in green

As you reach each checkpoint and the end of a stage your fuel tank is filled up. Extra fuel is added to the reserve tank at the end of a stage and bonus points are also awarded. Then it's time to go onto the next stage of the rally.

Sound is fine – there aren't any tunes but the effects are good enough. For some reason part of the sound disappears at times and then comes back later, but other than that there are no problems. Graphically it's not exceptional, but at least the road moves better than in US Gold's previous attempt at a car racing game, *Outrun*. The horizon scrolls smoothly as the car turns and there's little flicker in the graphics. The roadside features do seem to jump towards you a bit, but it's not that bad.

It's a cross between a racing game and a shoot-'em-up. In some ways it's very similar to *Overlander* by Elite: hostile cars and roadside hazards, a multitude of stages to go through and strap on weapons to improve your survival chances. Of the two games I'd say that this is slightly better, but it is just a bit too easy to play and it gets boring rather quicker than you'd hope.

GBH

FIRST DAY TARGET:
Complete ten stages

The Verdict

GRAPHICS 67%

- Colourful and fast moving roadway.
- Collision detection is a bit off.

SONICS 43%

- Good effects –
- but sometimes they vanish for a while.

GRAB FACTOR 73%

- Plenty to blast and easy enough to start with.
- Loads from tape or disk every few levels, and it gets a bit annoying for cassette users.

STAYING POWER 67%

- 50 stages to complete.
- After a while you can go for ages without losing a life.

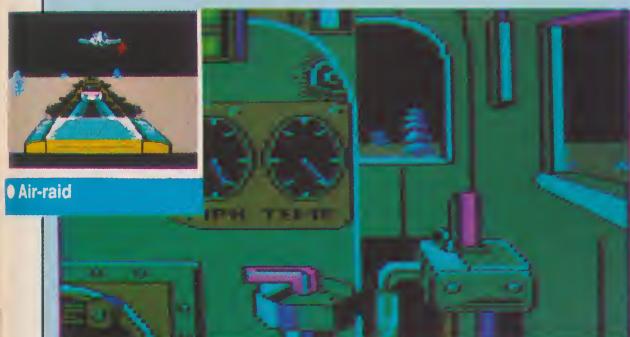

AA RATING 69%

- A good, hybrid shoot-em-up and racing game.

THE TRAIN

Accolade/Electronic Arts • £8.95 cass,
£14.95 disk • joystick/keys

First there was a tank, then came a hydrofoil. Now it's time to trundle off into the past at the footplate of a train, all courtesy of **Electronic Arts**. Their latest venture into the world of simulations is set in wartime Germany. You take the part of a resistance fighter who, along with a colleague, tries to steal a train with France's art treasures on board. ('Will the person taking the train from platform four please put it back?') The works of art are being shipped to Berlin to use as leverage in the impending German surrender.

• Steaming along in the engine

The question you, me and they want to know, though, is whether Electronic Arts make it four excellent games in as many months with their latest offering, or are they, as it were, run out of steam? Play begins at the station in Metz where you must first capture the train. You stand towards the rear of the train and give Le Duc covering fire as he tries to reach the signal box. Germans are hiding in the railway buildings and pop up occasionally to fire at you. Get your retaliation in first or the game's over. When Le Duc reaches the box you choose the **difficulty** level: easy, intermediate or expert. You then have to cover Le Duc as he returns: then it's time to depart.

The view switches to the inside of the train's cab and the simulation part of the game takes over. You have six things to operate in the cab: **throttle**, **furnace**, **brake**, **forward/reverse lever**, **steam blow off** and **whistle**. There are also three dials which indicate **steam pressure**, **engine temperature** and **speed**. When your engine is all steamed up release the brake, open up the throttle and away you go. Keeping the pressure up is essential, so periodically fill the furnace with coal: run out and you've had it. Keep an eye, too, on steam pressure, which can be released with the blow off lever - let it get out of control and the engine could blow.

To change direction you have to stop the train and move the **forward/reverse lever**. Don't flip the lever when the train's moving, though, because the gears will be destroyed and the train can only travel in the direction it was going when you switched the lever. (Signals are sent with the whistle, of which more later.)

There are four other screens which can be called up: **front gunner**, **rear gunner**, **map** and **status**. The gunner screens are used to shoot at any attacking enemy aircraft. On the map screen a small cross represents the train, blobs are stations and rectangles bridges. If a station or bridge is blue then the Germans (hiss) have control of it: pink means the resistance have it (hooray). A status screen shows the damage sustained by the boiler, brake and art and also how many of the enemy you've killed. Your **score** is calculated using these figures.

You have to reach **Riviere** before dawn and there are a myriad ways to achieve your destination. A network of railway lines covers France and there are many points at which you can change track. You need first to signal the resistance - who'll switch the points for you - with one, two or three blasts on the whistle.

As you travel towards your destination you need to stock up on coal and water, which can only be obtained at stations. Before you can refuel the station

The Verdict

GRAPHICS 68%

- Good engine room.
- Other graphics are sub-standard.

SONICS 36%

- Nice train effects.
- No tunes.

GRAB FACTOR 78%

- Combination of arcade and simulation works well.
- Air attacks are irritating.

STAYING POWER 82%

- Three levels of difficulty.
- Tricky to complete on all of them.

AA RATING 80%

- A very good game, but not quite up to recent EA standard.

• Taking it to the bridge

must be captured. The sequence is very similar to the start-up phase and more Germans stand in the buildings. If you capture the station you gain some intelligence information, often being a warning that parts of the railway network have been destroyed. A message can also be sent to the resistance to tell them to capture a bridge or station, or arrange for repairs to the train. You don't have to stop in a station: you can just go straight through.

Bridges are a much more dangerous proposition altogether. If the bridge is held by the resistance there are no problems, but German controlled ones are guarded by boats. Trying to go straight across a bridge is fatal, since the boats easily pick you off. To cross a bridge you must first stop at the bridge and then blast the boats out of the water. Once they've all been sunk you can safely cross. Too many hits on the train and it's game over.

Sound is fairly simple but good - just machine gun effects and several different train noises. The graphics of the cab are good, but the rest are more functional than anything else.

I had high hopes for *The Train* on Electronic Arts' recent record, but... It's still a good game, but it lacks that certain something to make it a truly excellent game. The mixture of arcade elements and simulation works OK, but you do tire of the regular air attacks.

GBH

FIRST DAY TARGET:
Reach Riviere on easy level

SECOND OPINION

"EA's simulators haven't been too realistic, at least as far as the CPC goes. The Train follows a groove that's getting too worn, a simulator with action sequences. If the latter were of high standard I wouldn't complain, but quite frankly they're not worth the memory expended on them. Let's hope EA's future releases display a bit more imagination and gameplay."

PBM

GREEN SCREEN VIEW
Station sequence is trickier,
but otherwise OK.

BY FAIR MEANS OR FOUL

Superior Software • £9.95 cass, £14.95 disk
• joystick/keys

The latest in a long line of boxing simulations has a twist that makes it different from all previous attempts: you can cheat! You don't have to, of course, but your opponents certainly will, and your chances of winning improve too.

In the centre of the screen is a boxing ring occupied by you, your opponent and the referee. Below it are two bars representing how many hits each fighter has taken and there's a clock that counts down to the end of the round. Above the ring is a board with the round number on and on either side of that is a score and a small figure. The figures have a number in the centre which tells you how many 'chances' you have left. Each player has five 'chances' which decrease every time you lose a round or get caught fouling your opponent.

The fight is split into fifteen rounds and to win you must have more points than your opponent at the end of the fight or reduce his 'chances' to zero. At the start of the round both damage bars are green and every blow taken by a fighter increases the amount of red in the bar. If the bar is completely red the fighter is knocked down and loses a 'chance'. The player with most red in his bar at the end of a round loses a chance. If both are

● Out for the count

A scroll down memory lane...

Boxing has long been a favourite subject for the simulation treatment, and *BFMOP* is only the latest in a series of attempts - some good, others not so - to get us punchdrunk. Remember these?

- *Frank Bruno's Boxing* (Elite). Opponents from around the world getting tougher to beat. Not the best, but fun to play - if the thought of mixing it with stupid stereotypes (an African with a bone in his nose?) doesn't bother you.
- *Rocco* (Gremlin, AA2, 36%). Also viewed from the rear. Unfortunately the opponents differ little.
- *3D Boxing* (Amsoft, AA3, 66%). Fighters are viewed from the ringside rather than behind, and it was the first one to have a two player option.
- *Barry McGuigan's Boxing* (Activision, Rave in AA5). Combat and a strategy part in training. Features two player option and is enjoyable still, especially if you want to think a bit as well as fight.

equal, then no-one loses anything.

Now to the important bit - cheating! The two

figures at the top of the screen can be one of three colours: **green**, **amber** and **red**. **Red** means that the referee has his beady little eye on you, **amber** means there's a chance of getting away with a foul and **green** means you can kick, butt and knee to your heart's content. Illegal moves are more damaging (and fun) than legal ones and so help you to victory. Once Mild Martin the junior champion has been defeated you go onto Steady Eddie the County Champion and work up to Deadly Dan the World Championship man. Each opponent gets progressively

● You can't win 'em all

tougher and more determined to win by foul means.

As with all combat games you have a wide variety of moves available to you, eight with fire pressed and eight without. Switching from legal to illegal and vice versa is a simple matter and you can also block punches when and if you feel like it.

All you get for sound effects are cheering crowds and the thud of glove on flesh, but that's really all you need. The boxer graphics are large, colourful and well animated, and *BFMOP* has a refreshing line in humorous graphics. Even the shadowy crowd looks good as they leap up and down in their seats at the end of a round. Colour is used well throughout.

First thoughts are 'Oh no, not another lousy boxing game', but fortunately it's much more than that. It's fun to play, the opponents are tough enough to keep you interested and, best of all, you can use unfair tactics to win a fight. Not the greatest game ever, but certainly the best boxing game.

GBH

SECOND OPINION

"As a boxing fan I have to look severely on this travesty of the noble art. How dare they allow kicking and illegal punching?"

Right, now I've got that out of my system: *BFMOP* is brilliant! It's amusing, enthralling and the range of difficulty is wide enough to keep beginners and old hands equally entertained. It ain't cricket, as Frank Bruno memorably put it - but it sure is fun!" SC

GREEN SCREEN VIEW:
Knock out

● Punch good: kick better

● Punch good: kick better

The Verdict

GRAPHICS 76%

- Large and well animated boxers.
- Good use of colour.

SONICS 35%

- Thud and cheer.

GRAB FACTOR 69%

- Fouling adds greatly to the excitement.
- One or two player game.

STAYING POWER 80%

- Six different opponents to beat
- As in real life, once you're World Champion the only way is down.

AA RATING 83%

- Superior have been quiet for a long time, but they're back with a bang. Know what I mean, 'Arry?

AMSTRAD PCW 8256 Word Processor pack
including Keyboard, Monitor,
built in Disc Drive and Printer

OUR PRICE - £345.00
(including VAT and carriage)

Any titles which are not yet released
when ordered will be sent on day of
release. No visitors please - we are a
specialist mail order company.

All prices include VAT and P&P in the UK.

Please add £1 to overseas orders for P&P.

Add 50p to your order if you require recorded delivery (UK only).

Please make Cheques/Postal Orders payable to **VECTOR SOFTWARE**.

Orders normally dispatched within 24 Hours. Send SAE for free Price List.

NEMESIS - THE ORIGINAL MEDDLERS

BONZO SUPER MEDDLER (FOR ANY CPC)
"THE BEST TAPE to DISC TRANSFER UTILITY AVAILABLE" WACCI 6/88

THE dedicated TAPE TO DISC utility

includes the devastating

BONZO's HACK PACK

BONZO SUPER MEDDLER is GUARANTEED TO TRANSFER MORE GAMES THAN ANY OTHER PROGRAM: THE FIRST PERSON TO FIND A MORE SUCCESSFUL PROGRAM WILL RECEIVE TREBLE THEIR MONEY BACK!! BONZO uses LESS memory, transfers MORE, COSTS LESS and gives REAL support to the user.

THE 1988 VERSION

Clearly the best in 1987, BSM & HACKPACK began 1988 with up to the minute refinements, **NOW EVEN MORE VERSATILE**. Return your old BSM DISC with £3 for a full upgrade.

** Details of **OVER 700 TRANSFERS** supplied. **

Other advertisers will tell you little gems about their utility handling AMSDOS filenames correctly, BONZO does too - big deal! Here's something more interesting, 50 out of the 700+ that transfer with the latest BONZO SUPER MEDDLER.

AVENGER, ANARCHY, ANTIRIAD, ARKANOID, ARMY MOVES 1&2, BARBARIAN BACK TO THE FUTURE, CAULDRON 1 & 2, COMBAT ZONE, CHP, BASKETBALL, COPOUT, DRILLER, EQUI-NOX, ENDURO RACER, FOOTBALLER OF THE YEAR, FROSTBYTE, GRAND PRIX SIMULATOR, GOONIES, HARVEY HEADBANGER, HERBERT'S DUMMY RUN, INTERNATIONAL KARATE +, JACK THE NIPPER, KNIGHTMARE, KILLAPEDE, LIVING DAYLIGHTS, LEADERBOARD, MICROBALL, MOLECLEMAN, METALYX, NEXOR, OBSIDIAN, PRO SNOOKER SIMULATOR, QUARTET, QUESTOR, REFLEX, SKATEROCK SIMULATOR, SUPERSPRINT, SIDEWALK, STARRAIDERS II, SOUTHERNE BELLE, STARWARS, SPACEACE, SPINDIZZY, SCRABBLE, TETRIS, THRUST 1&2, ULTIMA RATIO, VAMPIRE, WONDERBOY, XOR, ZUB, ZOIDS, 3D GRAND PRIX, SWORD SLAYER, BEACH BUGGY SIMULATOR, KIKSTART II, OVERLANDER.

Check these against your existing utility. 'NUFF SAID'

BSM & HACKPACK DISC £12.50 - Only

BONZO'S DOO - DAH

"This is the best I've seen in a long while.... I recommend it"

- AMSTRAD ACTION, JUNE 1987.

FEATURES BIGBONZO FORMAT

A REALLY USABLE 203K PER SIDE FORMAT, with all the support files to maximise its use. PLUS - All the disc housekeeping features that you could possibly want, including "Cloning", Directory & Sector edit, Disc search, Formatting, Read sectors, Filecopy, etc, ALL FUNCTIONS are effective on normal, enhanced, and the vast majority of "funny formats".

MANY UNIQUE FEATURES. Supplied on DISC - £12.50

BONZO BLITZ - NEW SPEEDLOCK'S to DISC!!

A TOTAL utility for SPEEDLOCKS, straight to DISC from TAPE!

ABSOLUTELY NO "JUGGLING" -

"HIGHLY RECOMMENDED", WACCI, 12/87.

WHAT CAN IT DO?

There's not many that it can't do! BLITZ works on a standard 464 as well as the 6128 & expanded machines. All our claims are based on user reports. A small selection for flavour!

GAMEOVER, SLAPFIGHT, MAGMAX, MARIO BROS., ARMAGEDDON MAN, ARMY MOVES, F15 STRIKE, GREAT ESCAPE, BLACK MAGIC, WARLOCK, SPACE SHUTTLE, METROCROSS, DIZZY, TRANSMUTERS, SHAO LIN'S RD, ARKANOID, COBRA STALLONE, DALEY'S SUPERTEST, TOP GUN, MIKIE, SCALEXTRIC, SARACEN, SHORT CIRCUIT, EXPRESS RAIDERS, XEVIOUS, TOURNAMENT LEADERBOARD, SCRABBLE, FREDDY HARDEST 1&2, MADBALL, MATCHDAY II, PHANTOM CLUB, SUPER HANG ON, DAN DARE II, SUPER STUNTIN, RACE AGAINST TIME, ATV SIMULATOR ETC.

Return your old BLITZ disc with £3.00 for full upgrade.

COMPILATION ROUND UP

A matter of course

LEADERBOARD PAR 3

US Gold • £14.99 cass, £19.99 disk
• joystick/keys

Take one box, put in two tapes or disks, maps of the courses, a pad of score cards and what do you get? Probably enough computer golf to keep you going for months.

Leaderboard was a Rave AA21, and some supplementary courses were provided for it in *Tournament Leaderboard*. *World Class Leaderboard* arrived in AA26 and also got Raved about.

All together there are twelve different courses to play, four to each game. The graphics are very good for a golfing game/simulation.

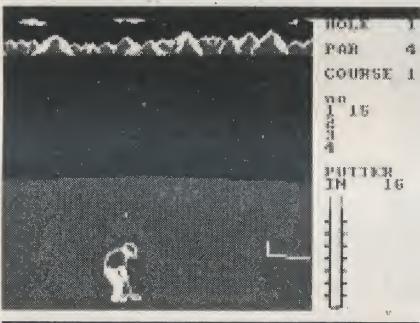

It's well presented and not just bundled together hastily for a quick buck. But then again it is expensive. You do

however get some extras in the scorecards and maps. Computer golfers will find plenty to do with this, but if you're not an avid player then you might find the compilation just a little too narrow in scope.

GBH

GREEN SCREEN VIEW:
Grass is green anyway

AA RATING 70%

● A hole in 15 – Nick Faldo watch out!

Summer – what summer?

SUMMERTIME SPECIALS

US Gold • £12.99 cass
• joystick/keys

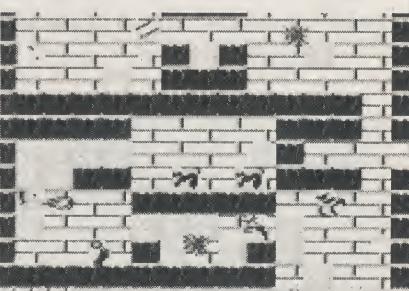

Six of US Gold's releases of the past year have been bundled together into a compilation: *Solomon's Key*, *Bravestarr*, *Captain America*, *Trantor*, *World Class Leaderboard* and *Rygar*.

Solomon's Key is a simple but fun platform game that scored 78% in AA26. *Bravestarr* is based on the cartoon series of the same name and is probably one of the easiest games ever to complete. It received 39% in AA33. *Captain America* was never reviewed, but had it been the rating would have been in the region of 53%. *Trantor* is a shoot-em-up with some huge and well animated sprites that earned it a Rave review in AA27. *World Class Leaderboard* is a golfing simulation reviewed in AA26. It's the second and last Rave game on the compilation. Bringing up the rear is *Rygar*, a poor coin-op conversion that scraped 56% in AA29.

This is a sort of which-do-you-want-the-good-news-or-the-bad-news compilation, with some outstanding and some decidedly average games. Still, six for the price of one is excellent value for money, and with compilations that's often the deciding factor.

GBH

GREEN SCREEN VIEW:
No problems

● Solomon's key, a good ol' fashioned platform game

GREEN SCREEN VIEW:
Kick-em-in green

AA RATING 73%

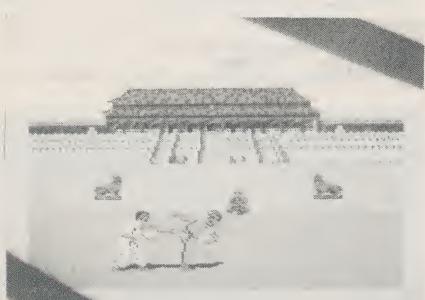

AA RATING 69%

The seven samurai, karate, kung fu...

KARATE ACE

Star Games • £12.99 cass, £14.99 disk
• joystick/keys

Combat games have been around for a long time now and martial arts are probably the most popular. The seven are: *The Way of the Exploding Fist*, *Bruce Lee*, *Kung Fu Master*, *Way of the Tiger*, *Avenger*, *Samurai Trilogy* and

● A piece of history: *Exploding Fist*, the first ever *Mastergame*

Uchi Mata.

The Way of the Exploding Fist was the *Mastergame* in the first issue of AA. It's a traditional kick-em-up for one or two players, and is still good even today. *Bruce Lee* was Raved about in the following issue and was more of an arcade game than a combat game. AA11 saw the arrival of *Kung Fu Master*, which notched up a respectable 72%. *Way of the Tiger* got 70% in issue 8 and the sequel, *Avenger*, got Raved about eight months later. *Samurai Trilogy* got the worst rating of all at 47% in AA24 and the compilation rounds off with 65% for *Uchi Mata*, reviewed in AA20.

If you're a fanatical combat gamer you'll find this compilation unbeatable, but seven combat games may be just too much for people with a more delicate stomach.

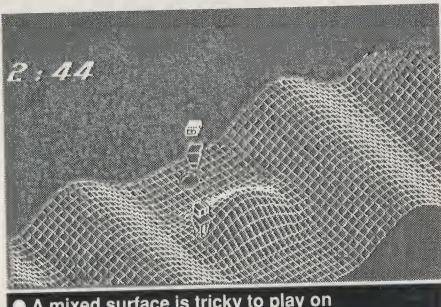

GBH

VECTORBALL

Mastertronic • £2.99 cass
• joystick/keys

A futuristic ball game, Vectorball is played between two robotic players over an irregular pitch. The idea is to score as many goals as you can and concede as few as possible within a time limit. Five matches are played, and you can play another person or the computer.

The playing area is viewed from slightly above and at an angle. It scrolls as the ball moves around to show the goals and the robotic players. A click ticks away the seconds on screen too.

• A mixed surface is tricky to play on

You move your robot around trying to catch the ball. If you're moving when you catch it then you carry on because of the momentum: otherwise you have to stand

SECOND OPINION

"The bizarre joystick controls on this drove me absolutely potty. Getting going is just so frustrating that I suspect many players, like me, won't have the patience. And why should they?" SC

GREEN SCREEN VIEW:
Mainly mono anyway

still. Once you have the ball you can shoot in any direction. Shot power is increased by extending your neck.

There are four different pitches to play on: hills, ditches, waves and mixed. With hills you have a generally flat pitch with some hills (more hills on higher skill levels). Ditches are the opposite of hills and waves are troughs that run both along and across the pitch. With mixed you have a jumble of all three types to give a very strange playing area indeed.

Colour's not used brilliantly, since most of the screen is black with white lines. Scrolling of the pitch is fast and the two robots zoom around. There's some flicker, but not enough to ruin the game. On the title screen there's a good tune, but effects in the game are simplistic.

You don't get a completely stupid computer opponent and so you'll play a good few games before you start beating it on a regular basis. The most irritating thing about it is waiting to play between games

The Verdict

GRAPHICS 63%

- Fast scrolling and well designed pitches.
- Lacking in colour.

SONICS 52%

- Tune on title screen.
- Few effects.

GRAB FACTOR 66%

- Intriguing game design.
- Confusing controls detract from the game.

STAYING POWER 55%

- Tough computer opponent.
- Will tire of it rapidly.

AA RATING 62%

- It's good, but not that good.

because there's a very long pause. Control is confusing as you switch from directional when you run around the pitch to rotational when the ball is in your possession. One or the other is fine, but not both. Not bad for a budget game, but that's all it could be. GBH

FIRST DAY TARGET:
Beat the computer

THING

Players • £1.99 cass
• joystick/keys

Planet Rombus has small spherical occupants composed of squashy insides and a hard silica shell. Their political advisor, the Ball, is off to see the Dingalinger Overlord. Thing is an intergalactic postie who's assigned to deliver the Ball, but the Ball is in a playful mood and refuses to go until Thing (you) has solved ten simple tasks. (Whaddya means sounds silly?)

You've a list of objects carried, commands, the day and a third of the screen with a horizontally scrolling playing area in which you stand. Ball floats just behind

The Verdict

GRAPHICS 56%

- Smooth scrolling graphics.
- Good use of menus and windows.

SONICS 57%

- Walking, and a better than average title screen tune.

GRAB FACTOR 47%

- Silly scenario.
- The most tedious game for ages.

STAYING POWER 29%

- Ten tasks to solve.
- See Grab Factor.

AA RATING 44%

- Worth a budget price – if only just.

SECOND OPINION

"For anyone above the age of, what, ten, it's dreary and dull – why have someone walking so slowly? – but perhaps for anyone younger than that who's easily amused it could be a hit. Just don't make me play it." SC

GREEN SCREEN VIEW:
Green

a different zone to the game. Objects are littered around the zones floating in canisters, and may be taken from them and carried to other locations to help you solve the ten tasks. Objects can also be examined and you can abort or pause the game. A status panel can be called up to let you know how things are going.

Little colour is used and the scrolling is smooth, but slow. The sprites of Thing, Ball and enemies are nice. Sound is footsteps and shots and a title screen tune.

At first it looks a cute game with nice sprites and some problem solving to do. After a few (very few) minutes however you get bored: all you do walk around (incredibly slowly) and try to find something to do. Unless you have the patience of a saint, look elsewhere for excitement, adventure and wild things. GBH

FIRST DAY TARGET:
Stay awake for five minutes

● Thing stands next to a phone box

1. R TELEPHONE BOOK.
2. NOTHING.
3. NOTHING.
4. NOTHING.
5. NOTHING.

1. EXCHANGE.
2. USE.
3. EXCHANGE.
4. STATUS.
5. ABORT.

ZONE 01
TIME 00:00:00

METAPLEX

Addictive • £2.99 cass, £6.99 disk
• joystick/keys

Garth is a naughty two headed monster with his mind set on the destruction of your home world. He lives inside a huge metal complex in the interior of an asteroid. Having arrived inside the asteroid you now

The Verdict

GRAPHICS 57%

- Fast moving and colourful sprites.
- Lacking in detail.

SONICS 64%

- Great title tune.
- Uninspiring effects.

GRAB FACTOR 52%

- Instructions are a little confusing.
- Too easy to get your ship damaged.

STAYING POWER 63%

- Huge complex to explore.
- A game that demands to be mapped.

AA RATING 56%

- Addictive should stick to strategy games.

SECOND OPINION

"Not the most innovative game that's appeared this year, but on the other hand they're not asking £15 for it. I don't think for £3 you can expect to be excited to death, and with Metaplex you won't be."

SC

GREEN SCREEN VIEW: OK

have the simple task of killing Garth and escaping from the asteroid.

The screen is split into two sections: a flick screen play area and an information panel. Included in the information panel are number of craft, object carried, laser power, acid level, shields and a three by three grid of boxes (more of them later). If laser power is out you can't fire and when your shields are gone you need to find a new craft.

There are three skill levels. Distributed throughout the complex are small flasks, which are initially empty, but which can be filled from the acid tank. If the flask is then dropped over a power unit its corrosive properties eats into the unit and drain Garth of power. When all four units have been destroyed in this way you can hunt Garth down, shoot him and leave by the exit as fast as possible.

It sounds simple enough, but

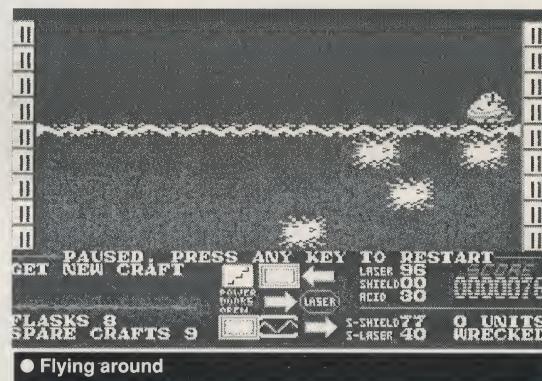

unfortunately the complex is protected by a security system. The system is twofold: it has nasty little droids who try to kill you, and there are sections of the base blocked off by electronic doors - which is where the nine boxes come in. They control doors, air flow, laser refill points, teleporters and also release droids into the complex. The condition of the boxes is altered by landing on a security panel and pressing fire.

The graphics are colourful, but lack great detail. Sound is simple, but there's a pleasant tune on the title screen and during pause.

There are plenty of things to shoot and problems to solve. In some ways it reminds me of *Dan Dare II*, but it's nowhere near as good. At £3 it's a reasonable effort. GBH

FIRST DAY TARGET:

Destroy two power units

GM CHESS

Camel Micros • £14.95 disk
• joystick/keys

Chess has been around for a very long time and computer chess for a few hundred years, for while the first chess computer may have been mechanical, it was still a computer at heart. Micro computer chess has been around since just after home micros arrived. There have been many attempts - some good, some indifferent and some plain bad, but there still seems to be an interest in producing more. Occasionally you do get chess games with a gimmick: speech synthesis, 3D displays and now there's one with music that plays throughout the game.

There are seven skills levels to play, ranging from easy to exceptionally difficult. Time between moves increases con-

SECOND OPINION

"I can't judge how good this one is at beating the Karpovs and Kasparovs of this world, but at my standard it's reasonably fast. At more advanced levels, however, it's hardly greased lightning."

Want to play chess and can't find a partner? This could be just the job." SC

GREEN SCREEN VIEW: You can alter colours, so no hassle

siderably on higher levels. You can choose from a wide selection of openings for the computer to start with or you can let it pick one at random. One or two people can play or the computer can play against itself.

Options to turn the music off, changes sides, change level and set up the board are included. From the main menu you can also load programs that cover rules, openings, mid game and endgame.

The tune is played throughout the game, except for when the computer is thinking. Sound effects are minimal, but it is a chess game after all. Graphically it's nothing out of the ordinary, with the board viewed from above and colours that

can be changed to suit your monitor.

What can you say about a chess program that hasn't been said a million times before? £15 isn't much really, but then it's not the best chess game around. That honour still goes to *Colossus Chess 40* by CDS (AA8: a whacking 92%). If you want music while you play, put on a record. GBH

FIRST DAY TARGET:

Beat the computer on level 3

The Verdict

GRAPHICS 47%

- Easily identifiable pieces.

SONICS 53%

- A tune in a chess program!

GRAB FACTOR 54%

- Reasonable introduction to chess.

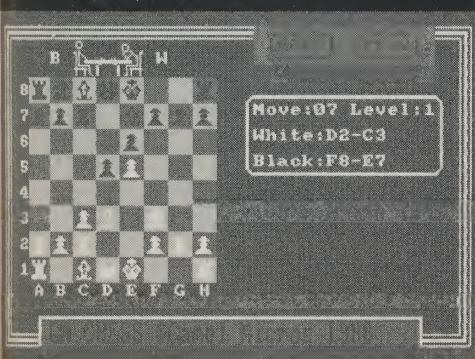

STAYING POWER 76%

- Chess programs never die.
- On high skill levels the computer take hours to make a move.

AA RATING 63%

- Appeal limited to chess buffs.

● Check it out, mate

FIRST BYTES

An assembly language series with Richard Monteiro

Welcome, assembler fans, to another feast of fun (*oh get on with it – ed.*). Ahem, by now you should have familiarised yourself with **Micro Assembler (MA)**, which was on last month's cover cassette. If you've forged ahead and tried writing your own routines you'll undoubtedly have come across many of the program's features (*quirks – ed.*). Expect a box most months detailing corrections, enhancements, patches and tips for **MA** – all contributions gratefully received. See below for this month's 'tweak'.

Now let's get on with assembly language programming.

Easy as A, B, C

All operations are performed on registers. A while back you learnt that numbers could be loaded into registers (in much the same way as values are assigned to variables). The general format is **LD X,Y** where X is a register (**A**, **B**, **C**, **D**, **E**, **H**, **L**) or register pair (**BC**, **DE**, **HL**) and Y is a number – between zero and 255 for registers and between zero and 65535 for register pairs. For instance, **LD A,27**, **LD BC,7328**, **LD E,167**.

Using a similar technique to the one detailed above, registers can be filled with values held in other registers. **LD A,B** places the contents of register B into register A; **LD H,C** fills H with whatever is in C; **LD D,D** loads D with D (useless, but possible nonetheless).

MA accepts the standard syntax of loading a register with a value. It also handles register-register loading, but without the usual comma: **ld a d**, **ld c c**, **ld h l** and so on.

Something else

You should also know that numbers can be retrieved from, and placed in, memory. Basic uses **PEEK** and **POKE**; assembler equivalents are very similar. For example, **LD A,(&8000)** loads the A register with the contents of memory location **&8000** and **LD (&8000),A** places the contents of the A register in memory location **&8000**. **MA** uses an odd syntax to simulate these commands (this will be altered soon):

ld a ,(&8000), **ld ,(&8000) a**.

Now for something new. If you want

to increment a BASIC variable by one, you might try something like **A=A+1**.

In assembler you would use **INC A**.

Next month you get the chance of writing a short assembly language program using the instructions you have learnt to date. Be prepared!

And Hacker's Only returns with a vengeance, with the 100 Z80 instructions Zilog don't want you to know about!

This increases the value held in **A** by one. Any register or register pair can be increased by one: **INC C**, **INC DE**, **INC BC**. While adding one to a register has its uses, adding large numbers to a register is generally much more useful. The instruction to do this is the appropriately-named **ADD** instruction. Only the **A** register can make use of this technique: **ADD A,20**, **ADD A,176**.

Add contents

Both the **A** and **HL** can have the contents of other registers added to them. **ADD** is opcode that makes this possible. Things like **ADD A,D**, **ADD A,L**, **ADD HL,DE** and **ADD HL,HL**. Note that the **A** register can only have 8-bit registers added to it while **HL** can only accept 16-bit registers (register pairs).

MA doesn't handle **ADD** instructions in the usual manner, so take care. If you are adding to the **A** register use the format **ADD,X** where **X** is any number between 0 and 255. All other **ADD** instructions mustn't have a comma splitting any part of the instruction. **ADD HL BC**, **ADD A B**, **ADD HL HL** are examples of how **MA** prefers things.

Tweak Micro Assembler

As you have probably found out, **MA** source code looks strange. For instance, dashes (-) are used to separate opcode from address or data and the right-pointing square bracket (]) denotes a label. Not only is this confusing to the beginner, but it's also wrong. Here are some remedies.

Change these lines to read:

```
2210 IF LEFT$(a$,1)=":" THEN 2690
2260 IF MID$(a$,t,1)="-" OR (MID$(a$,t,1)=" " AND MID$(a$,t+1,1)=".") THEN p=t-1:b$=LEFT$(a$,p):t= LEN (a$)
2390 IF LEFT$(e$,1)=".:" THEN 2590
2450 IF LEFT$(e$,1)=".:" THEN 2590
3110 IF n=2 THEN PRINT TAB(20);c$;",&;
HEX$(PEEK(a+1));:a=a+2
3120 IF n=3 THEN PRINT TAB(20);c$;",&;
HEX$(PEEK(a+2)*256+PEEK(a+1),4);:a=a+3
```

Add these lines:

```
3101 IF n=2 AND (PEEK(a)=&18 OR PEEK(a)=&10) THEN PRINT
TAB(20);c$;" &;HEX$(PEEK(a+1));:a=a+2:GOTO 3130
3102 IF n=3 AND (PEEK(a)=&C3 OR PEEK(a)=&CD) THEN PRINT
TAB(20);c$;" &;HEX$(PEEK(a+2)*256+PEEK(a+1),4);:
a=a+3:GOTO 3130
```

Load **ASMBPROG.BAS**, make the alterations and save the file as **AMCUSTOM.BAS**. Source code must now follow these rules:

- Opcodes and data are split by a comma (10 'ld a,27).
- Labels must start with a colon (10 ':loop ld bc,2000).
- CALL, DJNZ, JR and JP instructions no longer need a dash (or comma) between opcode and label – a space must be present (CALL :txt).

When an area of memory is disassembled, all the above rules are obeyed. Oddities still exist: these will be ironed out over the months. Source listings will appear in up-to-date-**MA** format and standard format. Be sure to alter **MA** when we publish modifications: if you don't you'll find the listings won't work. You've been warned.

PROBLEM ATTIC

Can Pat McDonald save the world again? Nope.

Even more basic

I have recently upgraded my 464 into a 6128 by having the 40025 Basic ROM fitted (by an authorized service agent). I now want to use the extra commands that a 6128 has in my Basic programs, but don't know how to.

I've been to my local computer shop (Soft Spot) but, although they tried very hard, they couldn't help and suggested you. Please tell me just what advantage I have now!

Martin Powell, Daventry

Basic 1.1 (which the 664 also has) is a fair improvement over the original. A full listing of the new commands would take up too much space, so I suggest you buy a 6128 manual. They're available from CPC Ltd, 0772 555034. They'll supply one for £12.83, which includes postage and packing as well as VAT.

Until you do splash out on such a manual, just try this one command. Put the graphics cursor somewhere on the screen using |MOVE, and then put in |FILL,inknumber. Also, when using RSX's, you can put data into the command, like this: |REN, "NEWNAME", "OLDNAME". Much better than a\$="OLDNAME": b\$="NEWNAME", and then |REN, @a\$, @b\$.

Death knell

Last night I switched on my CPC464 and promptly got an electric shock when I picked up my JY2. As a result of this my machine has stopped producing any sounds except for hisses.

Software loads into memory but no there are no in-game effects. What's wrong? Will it cost much to repair, and can I do it?

Mark Walker, Folkestone

I recently gave the office a cheap laugh when I attempted to repair a similar fault (considering how much it's costing to repair your repair, McDonald, I don't think 'cheap laugh' is quite right - ed). The problem lies in incorrect wiring inside the Amstrad that goes to the AY-3-8912 sound chip, which is also responsible for reading the keyboard and (naturally) the joystick. Occasionally

Main news of the day

I bought my CPC464 at the beginning of the year, and am slowly learning programming. Absolute Beginners is a great help. I have recently bought the October edition of Amstrad Action with the free cover cassette.

Side 1 - Dizzy - is OK, but the reverse side will not load. I keep getting the message **Read error b**. I wondered if any other people had wrote to advise you of this fault, or if it is just my copy. I would be interested to hear your comments regarding the cassette.

J E Audsley, Dewsbury

Many readers have congratulated us on the contents of the cover tape - and I'd like to extend a big 'Thank You' to everyone who contributed (Your cheques will be in the post soon!).

No copying process, however, is perfect. This page is being written two

weeks after the release of AA37. So far complaints received total 27. Allowing for one person in ten writing in, that means that perhaps 300 tapes did not work.

Out of 47,000+ reproduced, that figure is pretty good. So bad tapes occur less than one percent of the time. We'd prefer there to be no bad copies - but realistically, there always are some.

If you do get problems with loading, the first thing to do is just try listening to the tape. See if the quality of the tape is very bad. In general the CPC's can cope with all but the worst in quality - look for things like tape speed up and slow down, high/low pitch or volume.

Another problem is head azimuth alignment. The head that reads the tape works best when it's more or less at right angles to the tape, but the tape direction can vary. This is more of a problem with 6128's - the external recorder can be set to virtually anything, and need not nec-

essarily be a machine similar to the 464's internal cassette. Indeed, the vast majority of problems have occurred with 6128 owners.

If you have a reasonable quality of tape, then I suggest you try as hard as possible to get the tape working yourself. The way you do is the is to: a) try altering the volume, and if that fails, b) start adjusting the azimuth. Always apply tiny adjustments, and remember the position you started at.

If you still can't get any joy at all, then the only course open to you is to send it back to us, and we'll replace it for you. Bear in mind though, that although we test the replacements on a 464/6128 as applicable, there's no guarantee it will work on your system. Still, we'll hold the offer open for six months. Get your naff tapes back to: Duff tapes, Amstrad Action, Future Publishing, 4 Queen St, Bath BA1 1EJ. And once more, apologies.

static builds up on the joystick, and picking it up results in a voltage going through the chip that wrecks the sound.

Replacing the chip is a problem because it's generally soldered in. If there is a socket for the chip, then unplugging the chip and plugging in a replacement (widely available - try CPC if you have difficulties) is no problem.

De-soldering the chip is a lot trickier, and is generally best left to a decent repair service - Analytical Engineering are doing our 464 as I'm writing this. If your machine is under guarantee take it back to where you bought it.

Languages, actually - what about you?

I am preparing for going on to university and I am keen to learn a new language for a degree. I have heard it is best to learn Cobol as it is one of the main languages you use. Is this true? If so, can you recommend such a language, costing a maximum of £60?

If it best to learn another language, can you recommend any other packages. I have a fairly good knowledge of Basic but not machine code, and I own a 6128.

S D Griffiths, Harpsden

Depends. If you're going into a business orientated course, then Cobol will be taught to you anyway. Otherwise, who can tell? The best thing is if you ask around when you get there what will help you - there's not a lot of point me telling you to go and buy Pascal if you'll be using C!

Two companies who produce various languages for the CPC are HiSoft (0525 718181) and Arnor (0733 239011). Both produce fair quality languages, although Hisoft have a larger range. For your original suggestion, Nevada Cobol is very good. Also look out for Turbo Pascal - these languages run on CPM+, and so are OK for 6128's.

Another possible source is Wacci's excellent Public Domain Library. See the adverts in AA in recent months - just because the languages are cheap doesn't mean they're no good. Documentation (manuals and so forth) can be scanty though.

!! NOW SPEEDTRANS PLUS HAS EVEN MORE TO OFFER !!

SPEEDTRANS PLUS2

For CPC6128 (or 464/664 with DK Tronics 64K (or larger) Memory)
Once the programs has been transferred to disc IT WILL RUN ON ANY CPC.

SPEEDTRANS PLUS2 now handles the VERY LATEST Speedlock types automatically. No need to hold a key down at anytime during loading. SPEEDTRANS PLUS2 also saves 99% of opening screens and saves them in their full colours

FULLY AUTOMATIC – JUST ONE KEYPRESS * ONLY ONE PROGRAM TO RUN WHICH FINDS THE SPEEDLOCK TYPE AUTOMATICALLY * WILL TRANSFER ORIGINAL AND MANY OF TODAYS SPEEDLOCK PROGRAMS * NO FIDDLE OR MEDDLING – WRITTEN WITH THE AMATEUR IN MIND * AUTOMATIC DISC FILENAMES * NO WASTED DISC SPACE * SAVES THE CORRECT AMOUNT OF GAME CODE * SAVES 99% OF OPENING SCREENS * SCREENS SAVED IN THEIR CORRECT COLOURS * COMPRESSES SCREEN CODE TO SAVE EVEN MORE DISC SPACE * FASTER LOADING TIMES FROM DISC BECAUSE OF SHORTER FILE LENGTHS

SPEEDTRANS PLUS2 transfers over 200 programs to Disc, some of the latest it will do are MADBALLS, FREDDY HARDEST (both games) BASKET MASTER, MATCHDAY II, PHANTOM CLUB, GRYZOR (main program), SUPER HANG ON.

These latest Speedlock types can be identified by the whole screen flashing with horizontal bands of colour immediately after the first file has loaded. Do remember that **SPEEDTRANS PLUS2** does not save all the memory in the hope of having saved all the game. It saves exactly the right length of code. All screens are saved in compressed form – some as little as 4K (Basket Master) - thus saving even more disc space.

SPEEDTRANS PLUS2 is the most sophisticated Tape-to-Disc transfer utility for SPEEDLOCK protected programs ever published. It will certainly transfer more games than any other Speedlock transfer program on the market and with much greater ease. Other transfer programs require you to know how long the game code is so that you may run an alternative program for the long games which does not save the loading screen. This is done because they do not make use of the extra memory available on the CPC 6128 or from the use of an extra RAMPACK (DKTronics 64K or greater.) This program is highly intelligent in that it first reads the loader from the tape and establishes which type of protection is in use from 6 alternatives. At the end of the load then finds out how long the code is and if it is too long to be saved to one file it will move the excess code into the banked memory and save the game in two parts and write the appropriate loader program. The screen will also be moved into a bank and compressed before saving. This can mean screen files as small as 4K (Basket Master) depending on mode and content. All this adds up to a lot less disc space being used than with other transfer programs and you will nearly always get the loading screen saved. The exception to this is when there is no loading screen (as in SCRABBLE) or when the screen is blanked out and more code is loaded into the screen memory, as in BMX SIMULATOR and MADBALLS for example. Try getting a screen with Multiface or any other imager. These imagers are only capable of saving what you have in memory at the time the button is pressed. What happens in multi part games? you have to press the button for each part thus wasting precious disc space. They also save far too much code and therefore waste even more space and saving too much code means longer loading times from disc. Programmers are now checking to see if you have an imager plugged in and if you have the program will not load. Imagers also have to be in place before you can reload your program and saved programs can only be reloaded in to the machine in which they are saved. **SPEEDTRANS PLUS2** creates totally stand-alone files and if you have no other CPC even without extra memory they will run perfectly. It also displays the saving name on screen at the start of the load with all except the very latest games. In all cases the disc saving name is displayed while the save is carried out. To run the transferred game just RUN this name. Another intelligent feature of **SPEEDTRANS PLUS2** is that the very first thing it does is to find out which drive it is in. This means that if you have a two drive system you may run the program from drive B by typing RUN "B:DISC" or "B:RUN"DISC. However the saving will ALWAYS be to DRIVE A so with a single drive you must change the disc when prompted on screen.

DMP 2000/2160/3000/3160

The printer buffer presently in the DMP 200/3000 series is a 2K RAM. Most of this RAM is used by the printer's operating system leaving an average 1/2K as buffer space. Our upgrade kit contains a new static RAM chip which will increase the printer buffer by 6K (about 4 pages of text). This upgrade allows all Download Characters to be re-defined allowing the user to design special characters for use with scientific and other programs. The kit is supplied with full pictorial instructions to allow the amateur to carry out his own modification (the DMP2160 takes about 7 minutes). If you don't think you are up to it your local TV shop can do the job in approximately 15 minutes

UK £12.50 – EUROPE £13.75 – R. of W. £14.50

FIRETRANS

This utility will transfer a number of FIREBIRD programs from tape to disc automatically including most opening screens in full colour. FIRETRANS will work equally well from tape but will be more convenient to use if converted to disc with SAMSON/Transmat. It will transfer WILLOW PATTERN, RUNESTONE, CHIMERA, GUNSTAR, PARABOLA, REALM, SPIKY HAROLD, BOOTY, DON'T PANIC, GUNFRIGHT, STARGLIDER, NINJA MASTER, HELICOPTER, and some version of THRUST, HARVEY HEADBANGER and BOMBSCARA.

TAPE:- UK £5.00 – EUROPE £6.25 R. of W. £7.00
DISC:- UK £8.50 – EUROPE £9.75 – R. of W. £10.50

TRANSIT

TRANSIT is a disc-to-disc file copier which handles file upto 40K in length in one pass. It will copy from drives A-A, A-B, B-B and B-A making an ideal utility for use with 5 1/4" second drive.

TAPE:- UK £4.50 – EUROPE £5.25 – R. of W. £6.50
DISC:- UK £8.00 – EUROPE £9.25 – R. of W. £10.00

UTILITY DISC No. 1

This utility disc contains 5 programs, all menu driven. They are SAMSON, TRANSIT, QCLONE, VIEWTEXT and the fast disc FORMATTER.

DISC:- UK £15.50 – EUROPE £16.75 – R. of W. £17.50

Please write or telephone (0702 71529 for full brochure.

NIRVANA

Have you tried backing up your original expensive disc software and failed? Use **NIRVANA** before its too late! **NIRVANA** (meaning enlightenment) is an extremely powerful disc handling utility which has the following features: Disc to disc back-up copier which will handle most of the commercially protected discs available today. File copier for individual files. Disc formatter, much easier to use than CPM. Change file attributes. Erase files. Change filenames. Will handle all disc drive combinations

DISC:- UK £14.99 – EUROPE £16.25 – R. of W. £17.00

SHAREPLAY

THE STOCK MARKET SIMULATION
(All CPC's)

This is a serious educational program for 1 to 6 players and provides all the enjoyment of playing the stockmarket without any risk of personal bankruptcy!! Each player can buy and sell shares and the target is the first to reach £1,000,000. The program includes a stockholding portfolio listing the shares purchased, their number, cost and market value. Bank balances are also shown. Graphical representation of market fluctuations are given in the form of a bar graph. Also included is a high score table. Scores are automatically saved at the end of each session.

DISC:- UK £14.99 – EUROPE £16.25 – R. of W. £17.00

WORDSEEK

THE WORDSEARCH PROGRAM
(All CPC's)

This educational program will tax even the most agile mind. The aim is to find the hidden words in a 15 by 15 puzzle within a set time limit of 30 seconds. The time limit is extended for every correct letter of the current word found. You may create your own puzzle consisting of up to 10 words which can be saved to disc and used at any time. You may only retain one puzzle at a time but if you choose not to use your own puzzle then the program will randomly select one from the library of 50 on the disc. All of the puzzles in the library are made up of 10 words each consisting of 1x8 letter, 1x7 letter, 2x6 letter, 3x5 letter, 2x4 letter and 1x3 letter words. This ensures equal difficulty regardless which one is randomly loaded. The program contains a print option (for Epson compatible printers) allowing a hard copy to be made of any puzzle created. Keyboard/Joystick options are also available.

DISC ONLY – U.K. £14.99 – EUROPE £16.25
REST OF THE WORLD £17.00

TUNESMITH

TUNESMITH is a simple to use sound utility which allows you to use the keyboard to play and record your tunes. No knowledge of music or Amstrad sound commands is required all you need to be able to do is whistle the tune you play or record. The octave and period of notes is variable and the program includes synthesizer and vibrato effects. **TUNESMITH** will save any tune as a basic file which can be RUN, CHAINED or MERGED into your own program.

DISC:- UK £14.99 – EUROPE £16.25 R. of W. £17.00

SAMSON

SAMSON has been developed by us to transfer not only the normal programs but also many of todays where the code is much longer. **SAMSON** differs in many ways from other Tape-to-Disc utilities, the main differences being: * **SAMSON** retains original file suffixes (.SAMSON, SCN) will be saved as .SAMSON, SCN) * Improved file relocation method * Elaborate Tape-read/Disc-write system which reduces Tape Motor, Slave Replay and Disc Drive Motor wear substantially. * A large reduction in tape transfer time is also achieved in all but a few cases * NEW "SPLIT" option for todays longer games (we will be using this option in future routines) * All file information is displayed on screen and can be echoed to your printer if needed. **SAMSON** also transfer itself to disc.

TAPE:- UK £7.50 – EUROPE £8.75 – R. of W. £9.50

DISC:- UK £11.50 – EUROPE £12.75 – R. of W. £13.50

CHARACTER DESIGNER

(All CPC's)

- * REDEFINE YOUR PRINTER DOWNLOAD CHARACTERS
- * REDEFINE THE COMPUTER SCREEN FONT
- * REDEFINE ANY/ALL KEYBOARD KEYS (ASWERTY)
- * DESIGN SPECIAL SCIENTIFIC CHARACTERS/FONTS

Takes all the hard work out of character designing making it a pleasure. The printer part of the program will only work if your printer is capable of DOWNLOADING and is EPSON compatible – see your printer manual. Works with 7-bit or 8-bit output (8-bit port). All the designing is done "On-Screen" so you can see exactly what you are doing. You can save your newly designed characters to disc and reload them at any time into a basic program and into most Word-Processors. The program also allows the user to redefine any or all of the keys on the keyboard. This feature will be useful for those who require an ASWERTY keyboard. The disc also contains twelve sample fonts for experimentation

TAPE:- UK £7.99 – EUROPE £9.25 – R. of W. £10.00

DISC:- UK £11.99 – EUROPE £13.25 – R. of W. £14.00

FAST FORMATTER

The FASTFORMATTER will format one side of a disc in approx. 30 seconds with the choice of DATA, VENDOR or SYSTEM and its much easier than using your CPM disc.

TAPE:- UK £4.50 – EUROPE £5.25 – R. of W. £6.50

DISC:- UK £8.00 – EUROPE £9.25 – R. of W. £10.00

COMPACTOR

COMPACTOR will allow you to load a standard 17K screen, set the mode, border and ink colours and then save it as a compressed screen containing its own mode and ink colour information. Most screens compact down to an average of 9K which is an enormous saving on disc space. Loading time of compressed screens is also proportionately reduced.

TAPE:- UK £5.00 – EUROPE £6.25 R. of W. £7.00

DISC:- UK £8.50 – EUROPE £9.75 – R. of W. £10.50

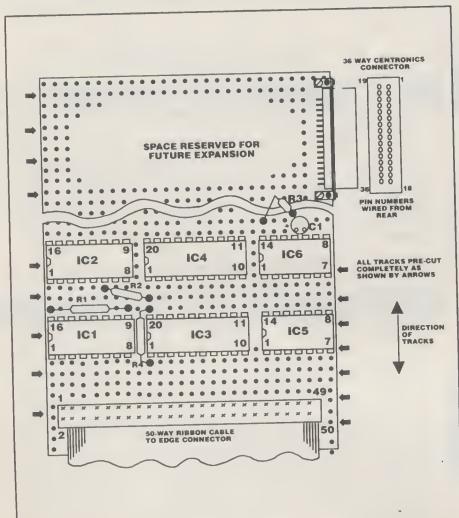

SOLDERING ON

Paul Calter presents another very useful project – an 8 bit printer port

This project is an 8 bit data port, which would normally be used as a printer driver. It's possible, though, to use it to communicate with any device which uses an 8-bit interface with strobed output and a high BUSY input.

The main advantage of this project over the standard 7 bit interface is that you can send codes greater than 127 without any problem – useful for sending IBM control codes, and also for Epson screen dump programs that use quadruple density graphics.

The end result is that what comes out of your printer looks even better.

Description

The circuit consists of only six chips. IC1 and IC2 (a 74-133 and 74-138) decode the address bus, and, together with \overline{IORQ} , produce two signals, SEL0 and SEL1. These are equivalent to I/O addresses &FBF8 and &FBF9.

SEL0 and SEL1 are gated with WR or RD on IC5 (a 74-02) to give three signals.

1. IC-5 pin 13 Causes a byte to be read, via IC-4, bit 0 of which indicates the state of printer BUSY.
2. IC-5 pin 10 Causes a byte to be written into IC-5, (74-273), an 8-bit latch.
3. IC-5 pin 4 This causes IC-6, a one shot timer, to produce a 50 uS strobe pulse (simplifies the program code.)

29	X						
30	X						
31	2-4						
32	5-11						
33	5-9						

This wire-list indicates which pins are connected to which. For example, the list says that IC2 pin 5 should connect to 1-9. Looking at IC1 pin 9, you can see it connects to 2-5, which is IC2 pin 5.

Where there are two numbers, for example IC5 pin 3, that pin connects to both pins listed, in this example A-8 as well as 5-2.

X means no connection to that pin. Pins 34-50 of the Amstrad connector should be left unconnected, as well as pins 12-18 and 30-36 of the Centronics connector. Pins 19-29 of the same should be connected to GND (0V).

Driving the port

The software provided works with Basic, and with any software using the standard Amsdos calls. Software which has its own driver routines (e.g. CPM and most word-processors) need to be patched to use this port. It's regrettable, but necessary for any piece of replacement hardware.

Construction

The circuit is built on Vero-Q stripboard, which has pre-cut etches especially made for IC use. A choice of edge connectors is offered. If the cheaper board mounted version is used, the components have to be

placed far enough up the board so as not to interfere with the rest of the keyboard. Also, it should be noted that the board is then vertical, and could obscure part of the screen.

First stage of construction involves soldering the chip sockets. These are fairly necessary for the project, especially for the 74-133 which is a CMOS chip and very vulnerable to static electricity.

Next solder in the 'discrete' components. That's the technical term for resistors, diodes, capacitors, potentiometers – basically everything that's not a chip or transistor. Make sure that you get C1 the right way round – use previous issues and deter-

mine which is the anode (positive leg).

The links are made of wire wrap. This is used a lot in prototypes/hobby use, and is necessary due to the large number of links in the project – using standard wire makes the project more difficult, because it's a little thick and unwieldy for this sort of job.

Once you have made all the links it's a good idea to check them properly using a multimeter, a device that can measure current, resistance and voltage between any two points on a circuit. A good link has a resistance close to 0 Ohms. If you don't have a friend from whom you can borrow one, then Maplin do a reasonable multimeter for £6.95 (code YJ06G). If you're intent on dabbling in electronics it makes sense to get one.

When you're happy about the connections, carefully insert the chips. If you can, try and touch a water pipe or similar metal structure, to earth yourself. That way any buildup of static electricity on you is

Use it!

When you have the device powered up, you have to type in and run the listing before you can use the port. Oh, and you need a new printer cable, Centronics to Centronics rather than the standard Amstrad edge connector/Centronics lead. Have fun.

drained and won't damage the chips.

And finally, before you switch on, do make sure that the IC's are connected with the dimple the right way round!

Who, me?

Grovelling apologies for last month's wiring diagram. Here is how it should have looked – honest!

All aboard!

No excuses – if you have a project, we want it now! We prefer, small, easy-to-build – and cheap – designs, but we consider everything. And we pay too: between £40-£60 according to quality and presentation.

It's a good idea to include full diagrams. Our skilled and dedicated art staff redraw them (*incorrectly*), so don't worry if it isn't brilliant – make it clear and easy to understand. Send your Cray 2 second processor to: *Hardware Projects, Amstrad Action, 4 Queen St, Bath BA1 1EJ*.

THE LOOK

An introduction to graphics – part two

Well, did anyone manage to decipher last month's conundrum? The byte-to-pixel arrangement is very strange indeed on the Amstrad, so I'd be surprised if anyone did manage it without help.

Mode 0 is perhaps the easiest to describe. A byte of screen memory (which runs from 49152 to 65535 – remember?) can be represented in binary form as eight bits, or switches, which can contain either a 1 or 0, on or off.

This screen mode is used a lot for games, because it has 16 colours. These are numbered from 0-15, and it just so happens that in binary this takes four bits, or switches. So it would seem that there is room to represent two colours in one byte: each colour would be used for one pixel, or dot.

The obvious way of using half a byte would be to cut it in two. CPC's don't take this approach – a pixel is represented by alternate bits in screen memory. Left pixels occupy bits 7,5,3 and 1; right pixels bits 6,4,2 and 0. So putting screen colours directly onto the screen is pretty difficult for your average human.

To illustrate, try this short listing:

```
10 BORDER 0:INK 0,0:INK 15,26:PAPER
 0:MODE 0
20 POKE 49152,170:CALL &BB18
30 REM Left pixel is now lit
   with ink 15 - press a key
40 POKE 49152,85:CALL &BB18
50 REM Right pixel is now lit
   with ink 15 - press a key
```

Mode 1 works along very similar lines. This only has four colours, numbered 0-3. A value of up to four takes just two bits to represent, so four pixels (four times two is eight – eight bits in a byte) can be represented in one byte.

From left to right, the bits used for inks are: 7 + 3, 6 + 2, 5 + 1 and 4 + 0. Weird isn't it? This might make things a little clearer.

```
10 BORDER 0:INK 0,0:INK 3,26:PAPER
 0:MODE 1
20 POKE 49152,136:CALL &BB18
30 REM Left pixel is now lit with
   ink 3 - press a key
40 POKE 49152,68:CALL &BB18
50 REM Middle left pixel is now lit
   with ink 3 - press a key
```

Take my breath away

Looking at this system for graphics, you might well look at your Amstrad in a new light. It has to process all of those ink changes, and put the right bit pattern onto the screen for the right ink.

Let's take a look at some Locomotive Basic commands that do interesting things to the screen.

PRINT: standard way of putting characters onto screen. It's generally followed by some characters held within quote marks, e.g. "This is a PRINT statement".

LOCATE: moves current position for printing to the two values immediately after the statement. Like so: 1,1 moves the print position to the top left corner of the screen.

INK: changes colour in a given pen. Flashing colours can be selected by inserting two colour values rather than just one.

BORDER: as above, but for border colour.

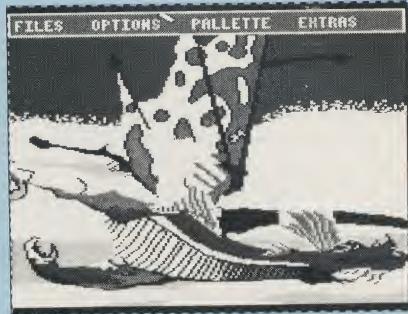

PEN: selection of the foreground colour to print with.

PAPER: as above, but for printing background colour.

```
60 POKE 49152,34:CALL &BB18
70 REM Middle right pixel is now
   lit with ink 3 - press a key
80 POKE 49152,17:CALL &BB18
90 REM Right pixel is now lit with
   ink 3 - press a key
```

I certainly wasn't planning on the postal strike when I announced the gallery last month. Still, congratulations to those who managed to get their contributions through, and initial reaction suggests that *The Look* is going to be very popular indeed. Watch this space...

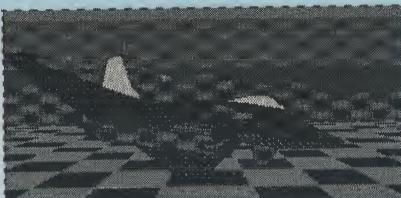

● Dragon – A pretty contribution done with Smart II. Mike Davies, Normanton

The gallery

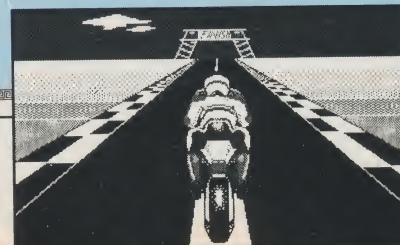

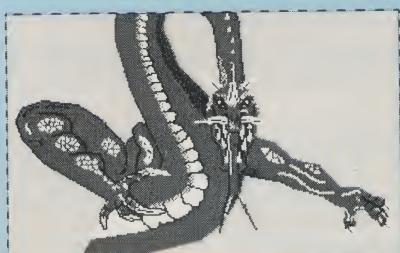

Reward: £20

Mark all entries with your name and address, state what art package was used (even better, do a Basic loader to set up the screen colours) then post them to: *The Look*, AA, 4 Queen St, Bath BA1 1EJ.

● EuroFighter – sometimes detail isn't as important as shape. J. Murray, Rayleigh

● Dragon, Madonna, Bike – A very good collection indeed. Well done C. S. Coles of Weymouth, you win £20

WIN WITH COURSEMASTER

THE COMPUTER HORSERACING PROGRAMME

NEW

- ★ RATES ANY RACE IN SECONDS - ANY DAILY NEWSPAPER IS ALL YOU NEED
- ★ NEVER out of date - Both N. Hunt and Flat - Fast data entry
- ★ AMAZING ACCURACY !! - Now you CAN BEAT THE BOOKIE !!
- ★ Works on the simple principle that FAST HORSES BEAT SLOW ONES !!!!
- ★ Clearly identifies best selection in every race plus these AMAZING Features :-
- ★ First, Second and Third choice shown for forecasts and Tricasts etc. Recommends most suitable type of bet.
- ★ Actually works out your Winnings on most popular bets including SINGLES and DOUBLES, win and each way, PATENTS, YANKEES, CANADIANS, HEINZ etc. Good EACH WAY and LONG ODDS bets clearly shown
- ★ Will PRINT out your BETTING SLIP for you
- ★ Maintains a BANK ACCOUNT - BET Like PROFESSIONALS Do!
- ★ PLUS !! - THE AMAZING COURSEMASTER SYSTEM. Try it! Can pay for itself many times over on the first day !
- ★ Supplied with 20 page BETTING GUIDE and MANUAL.

FREE HOT TIP OF THE MONTH TO EVERY PURCHASER

All For £14.95 inc Post + packing (Disc users please add £2.00 for disc) Available now for all Spectrums (inc + 3 disc version) Commodore 64/128 Sinclair QL, (add £1.00 for mdrive) Amstrad CPC, all PCW's BBC and Electron. Please state which.

£ PROFIT FROM YOUR MICRO YOUR OWN SMALL BUSINESS USING MICRO

- WHATEVER your MICRO is you can use it to make a good income! Even if you only have a couple of hours spare each week !
- We have put together a package of easy, sensible and practical business ideas which can easily be used by anyone with any micro. No computer expertise required !!
- Earn ££'s from home doing what you enjoy doing - using your COMPUTER! It doesn't matter which model.
- You probably already have all you need to start earning.
- THOUSANDS of potential customers in your area who will GLADLY pay for your services. We will show you how to find them!

Full step by step guide to EARNING MONEY FROM YOUR MICRO.

CHEAT MODE

Gets the toughest games going!

The Bard's Tale

After delving deeply into the cassette version of the game and working out which byte does what a poke for a super party was

conjured. Type in the poke and put a tape with a saved party in the cassette deck. Run the poke and the party is loaded and modified. Press a key to save the party back to tape and you find your characters are considerably more powerful, possessing lots of hit points, magic points, experience and gold. It also makes all spell casters capable of casting the four types of magic at seventh level.

The levels of the characters are not altered – neither are the statistics – but that's simple to rectify. Go to the Review

Board and choose Advancement. You have ridiculous amounts of experience and so you can make the character keep going up levels until you get bored. This further increases your magic points, hit points and statistics. Statistics level out at 18 for each one and won't increase beyond that.

If you want to enter the catacombs beneath the temple speak to the priest and say 'TARJAN'.

POKE METHODS ON TAPE

Here's how to input most Cheat Mode tape pokes – the instructions for each poke tell you which of the two to use. 664 and 6128 owners: first type 1 tape.

METHOD 1

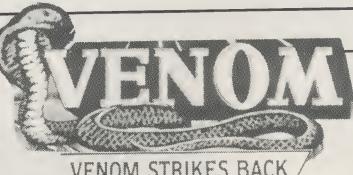

Rewind the game tape to the beginning, type in the poke listing and then type RUN and press the Enter key. (Don't use the key marked CTRL or Control, or the poke won't work.) Press the Play key on the cassette deck, then any key on the main keyboard - spacebar does nicely. The tape should now play through as normal.

METHOD 2

Skip the first bit of the game program. To do this, rewind the game tape to the beginning; type in the listing; now type CAT and press Enter. Start the tape by pressing Play and then any key. Soon you'll see the message: "Found something Block 1". It doesn't matter what the something is, and it varies from game to game. If the Cheat Mode instructions just tell you to skip the first block, stop the tape here.

If the instructions tell you to skip things, stop the tape when the "Found" message comes up for the last thing you're trying to skip.

Once you've stopped the tape, press Escape, type RUN and press Enter. Now press Play on the tape deck and any key on the keyboard to start the tape.

VENOM STRIKES BACK

Gremlin's third Mask game is split into sections, and passwords are needed to move between them.

R.N. Carter of Boston has supplied the passwords: Mayhem, Transmogrify and Valkyr.

Cholo

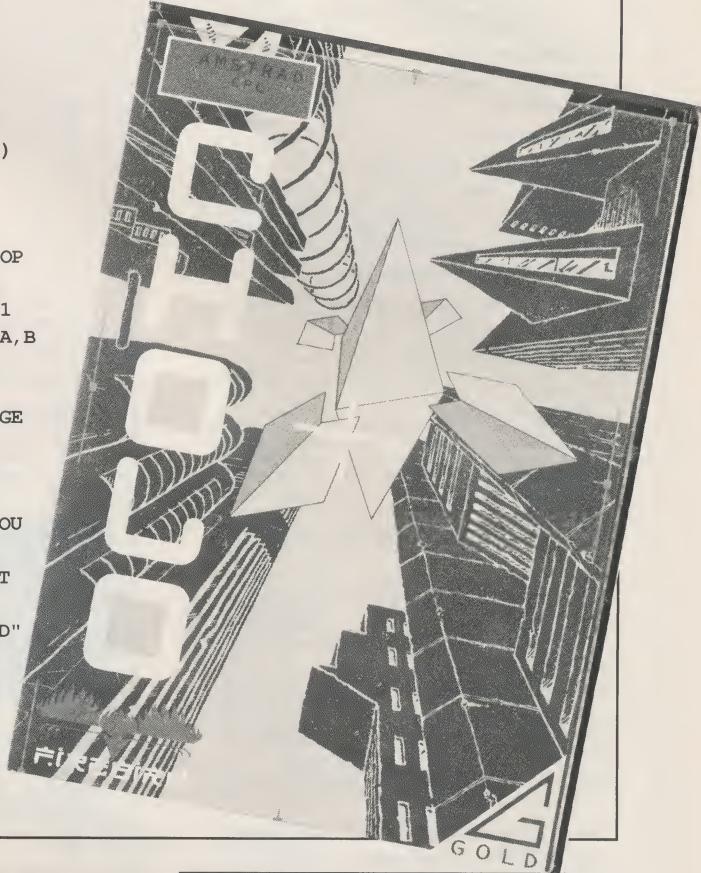

Firebird's game of robotic exploration gets hacked to pieces by Julian Page of Shrewsbury. Type in the poke, RUN it with the Cholo disk in the drive and follow the on-screen prompts.

Maxam 1.5 ROM

At last, due to massive public demand, we have produced an enhanced Maxam ROM especially for Protext users. The editor has been taken out, and you can now assemble your source code simply by typing ASM while it is in Protext's memory. Debugging is now easier with comprehensive diagnostics and the ability to change register contents and resume from breakpoints. Other new features include load/save machine code from Protext/Maxam and extra assembler directives. All the other Maxam features are included. ROM: £29.95.

POOLSWINNER II

THE ULTIMATE POOLS PREDICTION PROGRAM

- MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years.
- PREDICTS** Not just SCOREDRAWS, but AWAYS, HOMES and NO SCORES.
- SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- ADAPTABLE** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- LEAGUE AND NON-LEAGUE** All English and Scottish League teams are supported, and also the non-league sides often used on pools coupons.
- PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

PRICE £18.00 (all inclusive)

NOW
AVAILABLE

FIXGEN 88/9

AT LAST: No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish League fixtures for 1988/89. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner. Yearly updates available.

POOLSWINNER with FIXGEN £19.50 (for both)

COURSEWINNER v3

THE PUNTERS COMPUTER PROGRAM

You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc, etc. It outputs most likely winners, good long odds bets, forecasts, trifcarts etc. The database includes vital course statistics for all British courses. You can update the database - never goes out of date. **FULL PRINTER SUPPORT**.

PRICE £18.00 (all inclusive) includes Flat AND National Hunt versions.

The black box

Most games are heavily protected these days, resulting in longer pokes.

Many of you have one of the infamous black boxes that can be used to stop programs – the **Multiface 2** from Romantic Robot for example.

Often the only thing that they're used for is transferring games from tape to disk, but they can also be used to hack games for infinite lives etc.

This new occasional section is for owners of the **Multiface 2** and similar devices so that they can poke games without typing in huge listings.

Here's how you enter them:

- Plug the **Multiface** into the expansion slot at the back of your keyboard. (**Multiface 2** owners: make sure that the switch on the front is in the up position.)

- Load the game that you want to poke in the usual manner following the instructions supplied with it. (**Multiface 2** owners: move the switch to the down position after it has loaded.)

- Press the red button on the **Multiface** and a menu appears at the bottom of the screen. Press 'T' for tool and then 'H' to change input to hexadecimal.

- Press the spacebar and type in the number under the Addr column. Next type in the number under the Poke column. Repeat this process until you've entered all of the pokes that are listed for the game and then press 'ESC'.

- Press 'R' to return to the game: it then runs with the pokes that you've just entered.

Game	Addr	Poke	Effect
Impact	6be1	00	Extra Life
	6be2	00	every 10,000
	6be3	00	points.
Impact	6f94	00	Infinite
	6f95	c3	lives.
Batman	7428	00	Inf. Lives
Cauldron II	1c90	00	Inf. Lives
Dun Darach	792a	18	Open all doors
Green Beret	13c9	b7	Inf. Flame Thrower
Spindizzy	a85e	c9	Infinite Time
	720°	9528	Inf. Credits
Rygar	80b8	00	Inf. Tickets
	2c38	a7	Inf. Lives

Shorten the odds

- We receive dozens of pokes, and the ones published tend to be on cassette or disk, unless they're very short (get the hint?).
- Include an SAE if you want your disk or tape returned.
- Make sure your name and address is on everything you send us!

Win an ENTIRE ISSUE'S RAVES!

To win an entire issue's *Rave* software – and that includes the *Mastergame* – all you have to do is produce an excellent map, poke or set of playing tips.

The best solution each month wins a copy of every *Rave* and the *Mastergame* of that issue. The number of games varies of course, but in a good issue it can be half a dozen. We also give runner-up prizes every month of a *Rave* or the *Mastergame*.

This month's prize of £5,000,000 goes to Gary Barrett. Ok, the real winner of the *Mastergame* and all the *Raves* this month is Mike Wong for his assortment of pokes. The runners up who each receive a *Rave* or the *Mastergame* are Julian Page and Neil MacDougall. Congratulations all, and keep them coming – we appreciate your efforts! (And to all those who send in pokes and maps: if at first you don't succeed, try, try again!)

ONLINE

Making a triumphant return...

CYMRUTEL

0492 49194 • 1200/75 Viewdata 7 data, even parity one stop bit • Sysop: Ian Woodroffe

It's pronounced 'Com-ritel', and it's been in operation for around about a year. Old hat? Well, it seems that a number of improvements have taken place...

Cymrotel is based in North Wales. Once upon a time, it was a perfectly ordinary bulletin board, with few pretensions at all. Nowadays it has a vibrant, glitzy feel. It's going places.

Getting there

Access is through one measly port. That means that guests having a look round can queue for quite a long time – never mind. Once online, you have to declare just who you are. Pseudonyms ('handles') are allowed, although bear in mind that it makes sense to stick to one particular name.

If you like what you see you should register. This is quite a simple matter. You fill out an application form while on the service. A copy is sent to you. After confirming the information you return it, together with a cheque for £12. That pays for a year's subscription.

This is a Good Idea, because all bar one port are reserved for subscribers. You also have fairly well unlimited online time, as opposed to being given the

A promise and a threat

The promise: pretty soon Cymrotel will be downloading satellite pictures from MeteorSat. Apparently they already have the equipment, they're just working out how to connect it... This system should be up and running within a few months.

And the threat: the board makes the statement loud and clear; any material contributed which breaks the law or is related to criminal activity will result in the registration being terminated. People requesting such information are tactfully reminded of the rules. Nice one Cymrotel.

PFOD – or Polite Finger Of Disconnection. (Be warned, however: British Telecom present you with a heck of a bill if you stay on too long.) There's also plenty of CUG's (closed user groups, or clubs), and you must be registered to access these.

Becoming an information provider (someone who actually designs the pages) is also possible, and fairly cheap. Paying £25 gets you the title of editor, and it costs £5 for every twenty five pages you can play with. That's for a year.

Facilities

What you can access with the system is nothing outrageous, but nonetheless interesting. To start off with, the viewdata graphics have been used quite well, and the pages generally look well produced. More graphics would have been nice.

Page zero – generally the main menu on viewdata systems – contains a fair range of options, even for guests. There are various SIG's (special interest groups – clubs devoted to one subject), including quite a good one for the CPC. This seems to have a reasonable number of contributors as is, and the numbers should increase even more.

More

One of the main options available is to learn more about Cymrotel. It was first brought online in October 1987, and had very few phone lines. The system has gradually improved (always with the subscriber in mind), and logging on is now quick and easy – they even had the BT engineers in after complaints about line noise.

The location of Cymrotel is significant – the computer, modems etc. are set up in Llandrillo College, Colwyn Bay. A lot of the contributions appear to be from sixth formers (don't let that put you off). Also, the 'hacker as twentieth century wizard' idea (yawn) seems to be prevalent in the various names of the contributors – Gandalf, Paz, Probus, Raistlin and so on. Even Groberts has overtones of the fantastic, until you find that the co-sysop's name is Gareth Roberts.

The system makes some interesting comparison with *Gnome at Home*. They both deal with similar subjects (including roleplaying and adventure games) but, whereas *Gnome* appears to contain more material and variety, *Cymrotel* is better presented, with more logical gateways between points. Try comparing them. Some serious people find this usage of holy processing equipment blasphemous. I can't say I'm one of them, but you have been warned...

Up the revolution

Many people tried leaving a mailbox message at the number in the screen shots of Micronet. That was actually the Micronet page number. If you're still keen on leaving messages on the service (remember it costs money) then our number is 011112623.

It would make a change to get some E-mail as opposed to leaving it on the sundry bulletin boards I visit. I'm especially interested in new CPC related services – but if you think something else is worth a telephone call, use the above facility by all means.

There is some telesoftware on the board. At present there doesn't appear to be any for the CPC's. Still, if they get some contributions Cymrotel might change their policy.

Electronic mail is what keeps the service going. I must admit that going through the previous entries for the past year was quite absorbing, although too many of them were of the 'just testing this out' type – when I read mail, I can do without the junk variety.

One area generally left out of boards or services is comms. I admit that people able to get onto boards generally know enough about the subject anyway, but such services can provide quite a few leads for people who want to learn more about the subject – and that probably includes most of us.

There is a fair old selection of viewdata service telephone numbers, and Cymrotel indicates whether they're 24 hours a day or not. Strangely, it lists itself!

Next month: Microlink – a board that can show you satellite pictures – for a price!

ROMANTIC ROBOT present

1988 - THE YEAR OF THE ROBOT

RESET

Multiface Two

STOP

If you wish to be able to STOP any program at any time and COPY it to disk or tape, fully automatically, at a touch of a button, then MULTIFACE 2+ is the ONLY answer. There are no other comparable hardware devices, and the software copiers simply cannot compete.

Firstly you cannot compare the SUCCESS ratio of any tape copier with the MULTIFACE - you get what you pay for (and we throw in a lot more with the MULTIFACE . . .).

TAPE COPIERS always need to be loaded first, whilst MULTIFACE has all software in ROM for instant use. TAPE COPIERS can only attempt to copy a program as it stands, before it loads - there are various protections in the way and not enough memory for both the program to be copied and the copier. MULTIFACE is different: you can load any program from TAPE or DISK, run it as you wish and activate the MULTIFACE whenever you need it. Once you SAVE a program, be it to DISK or TAPE, you can CONTINUE it, SAVE it again if you wish, etc. In fact, you can play games as never before: there is no need to start from the beginning each time you play a game (as you would with a tape copier - if it could copy in the first place . . .). Since you can SAVE a program at ANY TIME and continue it, you can actually SAVE as you progress through a game. If, eventually, you loose all your lives, you can just load the latest saved version and continue from there! That is, if you do not manage to get INFINITE LIVES to start with: MULTIFACE has a built-in TOOLKIT which allows you to STUDY and ALTER anything in any program; you can thus POKE in infinite lives, ammo, etc. MULTIFACE is extremely simple to use, friendly, idiot-proof, menu-driven with on-screen instructions, fully automatic - PURE MAGIC. It can be used on any CPC, comes with a cable and an extension bus for £47.95 ONLY! By the time you buy 10 programs on tape instead of disk - MULTIFACE will put them on disk for you - you will have saved some £50 which is more than the cost of a MULTIFACE. The money you save on further tapes is all yours!

MULTIFACE - WORTH EVERY PENNY, SAVES YOU POUNDS!

NOW AVAILABLE: MULTIFACE 2 PLUS - THE INVISIBLE ONE.

Tape-to-disk at the touch of a button. Ridiculous, you may say, but it works every time. Multiface can stop any program in its tracks and save the program from memory to either tape or disk. It's completely fool-proof. Similar products have had problems with screen size, colour and even sound: Multiface can handle all these without a second thought.

That alone would have satisfied many people, but Romantic Robot has gone one step further, incorporating a memory editor. No program is safe with this: everything is out in the open, including the Z80 registers, CRTC data and any part of memory.

Don't be fooled into thinking this will result in mass piracy, however. The Multiface unit itself must be plugged into your Amstrad to allow reloading of a program it saved.

Multiface II must be the cleverest hardware device at present - a necessity for disk owners who thought they were stuck with loading from tape every time.

AMSTRAD ACTION JANUARY 1987

WOULD YOU LIKE TO TURN YOUR CPC INTO A PROFESSIONAL SET-UP?

Would you like to be able to attach additional disk drives - 40/80 track, single/double sided, 5.25 or 3.5 or 3 inch - and store up to 800K per disk? All controlled by a powerful DOS? Have RANDOM ACCESS to your files? Get a PRINTER BUFFER and SILICON DISK and a ROM manager and over 50 new bar commands! All this on a single ROM:

RODOS

PILGRIM

Ingrid's Back AND Lancelot in one issue... yessir, Pilg-Person!

Hail to thee, blithe Pilgrims! In this month's rather cramped edition we have room for red-hot reviews of *Ingrid's Back* and *Lancelot*, plus some great tips for those in distress, and news from adventurers far and wide. Drool, Pilgs, but wipe your chins afterwards!

INGRID'S BACK

Level 9 • All CPC's • £9.95 cass, £14.95 disk

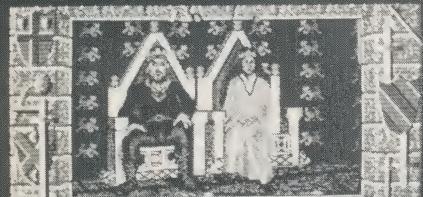

This very pleasing game design marks a substantial improvement on Level 9's previous two titles. Aged Pilgs will remember the distinct disappointment of seeing *Knight Orc*, the first game produced using Level 9's updated adventure system. *Gnome Ranger*, which followed it, was a marginal improvement, but somehow the game still didn't cut the crumpet - though The Pilg should hasten speedily to add that it was still a very impressive release by most adventure standards.

If you really want to understand the good points of *Ingrid's Back* - and it is a good game - you need to know a little about why the previous two games failed and what Level 9 were (and still are) trying to do.

The main feature of their new adventure system is the ability to program characters with whom you can interact. As Pete Austin pointed out to the Pilg some years back now (and I've quoted him endlessly), the number of satisfying and original puzzles you can build nowadays around objects is really very small. The trouble is we've been playing object-oriented games since *Colossal Adventure*. If you think back to any early adventure, I bet you'll find that the most memorable puzzles (if there were any) were to do with objects and their various uses.

For example I always remember the rod which you had to wave in *Colossal*, the rock you had to press in...er...one of those Interceptor adventures, and so on. Of course there were characters in those days, but they were mostly evident in *The Hobbit*. This game's major contribution to adventuring was the character-based puzzle, one of the first examples of which was Thorin carrying you out of the Goblin's Dungeon. Characters have enormous potential as puzzles, together with the added advantage that they can, if well programmed, greatly enhance atmosphere. Object puzzles, on the other hand, are usually rather static - and most of them have been used already.

Level 9 therefore set out to develop a character-based system that would bring games to life. In *Knight Orc*, there were dozens of NPCs (non-player characters controlled by the computer) - as a result of which confusion reigned and the game suffered. Furthermore, the characters were rather boring. After all, there's more to an interesting character than simply being able to give it commands, as you'll see in *Ingrid's Back*.

• pictures showing scenes in Arthur's palatial hall. Hundreds of wall torches gave a flickering light to the room. "It's still valentines despite its size. Lancelot could see Gnomes, Sir Guy and King Arthur. Sir Guy growled furiously towards the exit. King Arthur said, 'Welcome to Camelot, Lancelot. Merlin has forecasted that you are destined to become the greatest of all knights. We are honoured to have you at our court'."

• *Ingrid's Back* with a vengeance!

Setti
YUW A COM

Gnome Ranger went a little further, but the characters, although very colourful in a couple of instances, remained rather unimpressive. In *Ingrid's Back*, however, the people you meet and spy upon really do add a lot to the game. Characters, it seems, are growing up. Here's what they get up to...

The story concerns Ingrid's return to her home village of Little Moaning, where all the gnomes-womesies are going about their business completely unaware that the local squire, Jasper Quickbuck, is planning to have them all evicted.

The game falls into three parts, each one a separate module that can be played independently of the others.

In the first part, Ingrid has to collect signatures from her fellow gnomes for a petition against the eviction. This is pretty simple, since you can locate most of them by using the game's high-level 'find' command. The main objective of this first part is to get you used to the system, the commands - which include GO TO and RAMsave - and the characters.

In the second part the eviction order is in full swing and the baddies are on the march. Ingrid has to defend Gnettlefield Farm against invading trolls and other representatives of the capitalist tendency.

In the third part, Ingrid enlists as a maid in Jasper Quickbuck's mansion in an attempt to dig up some dirt on the old dirtbag and bring him his just desserts.

Throughout the game, the personalities you meet are full of character, and what's more they carry out many different actions which, when observed, add a great deal to the plot. In fact, in Part III, there's even a character whom you can spy upon through a hole in a wall, watching him go about his (mysterious) business. All this adds enormously to the enjoyment of playing.

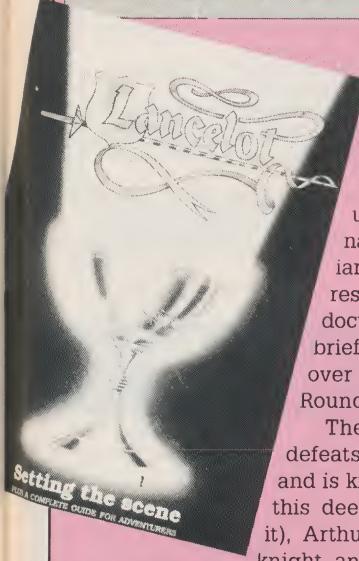

In addition, the graphics for the game are a vast improvement on earlier Level 9 efforts. This improvement is, frankly, long overdue. The first Level 9 graphics, back in the days of Emerald Isle and Red Moon, were pretty ghastly and since then the company never seem to have got to Grips with matters visual. All that's changed now, and the pictures are fabulous. They're not as technically well drawn as the Magnetic Scrolls pictures but I'd venture to say that they have more warmth and character.

Playing the game is a pleasure, with each module having a different feel to it. There's novelty in the first, challenge in the second, and detective work in the third. What more could you want?

Atmosphere	83%	Interaction	83%
Challenge	81%	Overall	82%

LANCELOT

Level 9 • All CPC's • £9.95 cass, £14.95 disk

Level 9 have now turned their backs on Mandarin. It seems to have been a rather brief affair, and *Lancelot* is likely to be the only Level 9 product coming out under this label. Does it deserve this unique status? Certainly the scenario is a potent one. Those not familiar with the Arthurian legends can rest assured that there is adequate documentation with the game, but in brief the saga concerns Arthur's reign over Britain, aided by his Knights of The Round Table.

Thence comes Lancelot, a squire, who defeats Arthur in combat but spares his life and is knighted by the king in recognition of this deed. Guenever (that's how they spell it), Arthur's wife, takes a fancy to the new knight and Lancelot finds himself bound to her service, both through his own inclinations and her desires.

Level 9's game tries to pack an awful lot into what is essentially a three-part adventure. The first two parts are effectively one, since you can move between them with ease. However, you can also choose, at the beginning of the game, to move straight onto the final chapter – the Search for The Holy Grail.

You start the game outside Camelot and must first fight with Arthur before entering the castle stronghold, where you are knighted and then sent out to win yourself a reputation by rescuing an assortment of captured knights. The puzzles at this stage are extremely simple and this phase, in common with the last three Level 9 3-parters, simply provides an opportunity to get used to the system.

Unfortunately, it also provides an opportunity to discover some very strange programming quirks in the game, which abound throughout all three parts. For example, you cannot remove your armour at will, but find yourself taking it off quite happily before climbing a tree; you can clean your armour, but you can't clean yourself – even though you are dirty, and so on.

There are many trivial illogicalities like these which do not actually affect the gameplay but do seriously mitigate the atmosphere of what could otherwise be a superlative game. The char-

acters also suffer from sloppy programming, from time to time making quite inappropriate remarks, often relating to some action or situation no longer relevant.

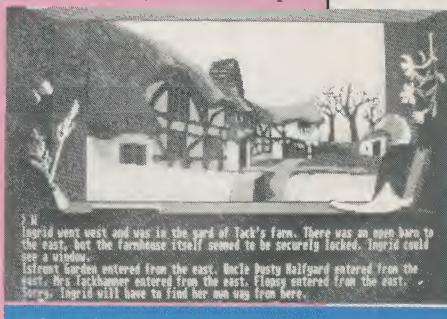

What is far more serious is the actual structure of the game. There's a huge amount of material condensed into this adventure and the space available just isn't enough to do it justice. As a result, great quests which could have made an adventure in themselves are dismissed in a single puzzle, leaving the player feeling, if not cheated, then at least let down.

For example, at one stage you are told to rush off and help raise the siege of Lyonesse. You arrive on the scene, solve one simple puzzle that takes about five minutes, and the whole army surrenders! In another case, you defeat an entire army without solving any puzzles at all! Truly, this *Lancelot* is, as Chaucer put it, a 'parfit knyghte'!

Against these weaknesses you have to place some superb scene-setting in Camelot and elsewhere, and one or two very satisfying puzzles. Furthermore, the character programming, although at times sloppy, shares some of the strengths of *Ingrid's Back* in that you can follow and observe characters getting on with their daily lives – a process that adds greatly to the atmosphere of the game.

The graphics are at times very attractive, but they don't quite match *Ingrid's Back* for quality and, in one or two places, are very poor. Like the game structure itself, the presentation is a curate's egg of powerful, convincing moments, and depressingly low standards. The blurb quotes Pete Austin as saying this is their best game yet, but the Pilg finds it hard to agree. When it hits the high notes, it certainly matches anything the company have done so far, but the low notes seem even more depressing as a result.

What this game shows is that there is a tremendous potential still to be explored in setting text adventures round potent story scenarios such as this one. It also shows that you need either to be very selective in what you try to squeeze into a game, or else you need an awful lot of programming time, disk space, and patient play-testing.

• *Lancelot* hits ye streets!

Empty Tummy — 12 room game incorporating foot-tapping music, devilish gameplay and digitized effects.

Micro-Music Creator

The Micro-Music Creator lets you produce startling three-track musical compositions and digitised sound effects which can be incorporated into your own software — with the minimum of effort.

You don't need a music degree to operate it either. It is powerful and sophisticated, and yet is so simple to use that it soon has you creating Beethoven-like symphonies.

Just look at what it offers:

- ❖ Simple pull-down menu selection
- ❖ Treble and bass clefs
- ❖ 15 pre defined sounds (from piano to cow bell)
- ❖ Uses standard musical notation
- ❖ Music will play in the background
- ❖ Records and plays back digitized sounds.

SPECIAL OFFER! 20% OFF!

To all Amstrad Action readers who reply before 1st November.

Available on tape £7.95, disk £11.95 and rom £19.95

(Normal retail prices: tape £9.95, disk £14.95, rom £24.95)

Please make cheques/PO's payable to:

The Pilgrim's postbag

Oh, bugged: *The Hobbit!*

I write to you not in a wild plea of anguish, but to question the parser in *The Hobbit*. I have in my possession the rope...

```
>EXAMINE ROPE
You see the rope
>TIE ROPE
I see nothing to tie the rope to.
>TIE ROPE TO ELROND
The rope is already tied.
```

Now what is going on?!

Mike Wheeler
Surrey

Welcome to the 've discovered a Hobbit bug' club...

Son of Rigel's Revenge - part II

Sorry to have to complain but the *Rigels Revenge* solution doesn't work too well when you give the bone to the wee dog. I tend to get savaged by Mutant Poodles. How do you get past the Fidos and what is the gap you are talking about?

I've played one or two games of the adventure sort and the question I have to ask is why a full list of accepted words isn't printed either in the game or on the packaging. Trying to second guess the parser is a real pain in the neck when you have solved the main problem.

Timothy Bell
County Durham

Well Timothy, the *Rigel's Revenge* clues

Applause for *Bard's Tale*

Although I have eagerly read your part of AA since the beginning, the only adventure I have previously bought is *The Worm in Paradise* by Level 9. However my colour monitor appears to be on its last legs (as does the rest of my 464) and, since games like *Matchday II* and *Target Renegade* are now loading without all except one of the background colours, my interest in these types of game is starting to fade.

I was browsing through the games in the local WH Smith when my eye was caught by a cassette copy of *Bards Tale*. It did not take me very long to decide to buy it when I remembered the contrasting colours in the game and the opinion of it you gave in AA35.

After a few minutes of playing I realised my money had not been wasted, unlike so many games I buy I had found one which I could play not only for one week but one with lasting interest which I could load in again and again.

The thrill of playing an RPG – previously destroyed after attempting to play *D & D* and *Dragon Warriors* with my younger brother and sister – came back to me,

To me, this is what a computer game should be about. I would just like to recommend the *Bard's Tale* to any AA reader whether an adventure fan or not as everyone will enjoy it.

Thomas Page
Address unknown

I've just bought that amazing game *Bard's Tale* and I can tell you it's one of the best adventures that I've ever played. I think Electronic Arts deserve a pat on the back for it. Having followed your column since AA1, I've seen what a great job you've done in helping people solve games and also in bringing news of the latest games for the Amstrad – so now it's my turn to ask. I would be grateful if you could find out when *Bard's Tale 2* is going to be released for the Amstrad.

Tim Gurney
Guildford

Tim, the bad news at the moment is that there are currently no plans to convert BT2 for the CPC's. The good news, however, is that EA were apparently 'delighted' with the sales they achieved with BT and are therefore considering future conversions. Keep your fingers crossed and watch this space...

weren't exactly intended to be a solution! There's much more to the game than that. The clues were simply to point you in the right direction. However, as far as the Mutant Poodles are concerned, try giving

the bone to the dog, then going up, up, w, and then south. The tank should cure the poodle problem. Then SW, up, S, press green button, and jump the gap...

The Pilgrim's clue pot

This month's delicious aroma of serious situations resolved in a deliciously scented stock of sensible solutions is brought to you courtesy of the following almighty Honorary Pilgs:

Timothy Bell, Jamie Tillman, and Brian MacGregor

Kentilla

To fly over to Tylon's castle make Timandra and Zelda meet and then go to the front of Tylons castle. Timandra and Zelda will eventually come, so CLIMB ZELDA and you will be transported to the castle. To open smooth doors pull arm of the gargoyle statue.

To open chest, dip gold key into the barrel to turn it to iron and now open chest. At the waterfall edge tie rope to stalactite.

Examine green emerald in the dark, you will find some words, say these words and... The boat has a giant hole in it so try balancing the water with the chalice. Drop moss in plains then look.

Never Ending Story

Drop coin by Wraith. Say please to open doors leading to the Empress's quarters. Wait till the Sphinx's blink and run south.

Seabase Delta

To wake hen. Go into the room with the basket, open basket, examine basket, a hen will walk out. Now get the chewing gum, go back to hen, chew gum, blow bubble (this will eventually pop) and then the hen will wake up and lay an egg.

The Bards Tale

When mapping, the first map of any sequence enters at the southwest corner, subsequent levels are stacked. Get rid of the thief and get a monk instead. On later levels he will do more damage than any other. Also, he is very useful for carrying things as he is most dangerous unarmed. Are a enchant (mage Spell) is hopeless and doesn't work – don't waste energy on it.

Later levels have loads of blackouts so carry a torch or two. Howater will let you down when you need it most. Magic Items (eg Lorchelm, Harp of Healing, Soulsword etc) all have a limited number of charges and when 'used' by a character often summon powerful characters to join the party. Pet favourites are Greater Demons and the Old Man, both of which can wipe out whole groups at a time. Wipe out Dragons and Demons first – it is very easy for them to wipe out an entire party very easily. When smoke gets in your eyes strike another light. Always look for traps and use a magic compass.

TYPE-INS

Programs packing more punch than Mike Tyson

Pull down menus

And now - a pull down menu system for the 6128! With a few alterations (notably the use of COPYCHR\$: an RSX was printed in AA22) it works on the 464 as well.

Lines 10-630 are simply a demo program, whereas 10000 onwards

is the actual menu system.

Marcus Williams of Birmingham wrote this program - big, but very useful (the program, that is, not - as far as we know - the author!).

About Input Output Toolbox Options Exit

QUIT MENU
Catalog
Erase File
Change Drive
Change User Number

Calling all 464 owners!

If you don't have AA22 to hand, here's a quick summary.

The first thing to do is to insert these lines:

```
10015 RESTORE 10017:FOR t=&BF00 TO &BF06:READ
a$:POKE t,VAL("&"&a$):NEXT
10017 DATA cd,60,bb,32,07,bf,c9
10880 LOCATE x,y:CALL &BF00:un$=STR$(PEEK(&BF07))
:PRINT CHR$(211)
11700 LOCATE q,t:CALL &BF00:a$=a$+STR$(&BF07)
```

Next, alter lines 10880 and 11700 as follows:

```
10880 LOCATE x,y:CALL &BF00:un$=STR$(PEEK(&BF07))
:PRINT CHR$(211)
11700 LOCATE q,t:CALL &BF00:a$=a$+STR$(&BF07)
```

Now it's your turn. Lines 11110-11250 contain some commands with extra parameters. In general the third parameter is the temporary graphic ink colour, and the fourth is the printing mode.

A similar effect can be obtained with PRINT CHR\$(23); CHR\$(x), where x ranges from 0 to 3 - 0=NORMAL, 1=XOR, 2=AND, 3=OR.

Good luck!

```

Here, have some money!

Send us your listings and not only do you stand a very good chance of getting in print in your favourite magazine, you could also earn yourself £100. Every Type-In we publish is paid for, and £10 is the absolute minimum. So what are you waiting for? Send your tape or disk - and a printout if you can - to **Type-Ins, Amstrad Action, Future Publishing Ltd, 4 Queen St, Bath, BA1 1EJ**. And here's a few tips you may find useful:

- Send only your own original unpublished work;
- Use lower-case, not capitals, for variable names;
- REM statements make the

program easier to understand;

- Don't use letters that look like numbers as variable names (O and 0, for instance, or l and 1);
 - Avoid lengthy multi-statements. Short lines aid debugging;
 - And ensure your name and address are on every piece of paper, cassette and disk you send.
 - If you'd like to reach an even larger audience, declare that you are putting your contribution into the Public Domain.
- Oh, and one final thing. Good luck!

Program Notes

Line 10010 sets up the machine code routines as well as the user defined graphics and similar bits and pieces. It needs to be called at the beginning of the program - as should line 10160, which creates the menus. Needs the number of menus in no%, and the data statements for the menus, as lines 100-150. Line 10330 pulls down menu meleno% at x coord in x1. The screen is retained during this operation. Line 10420 moves the bar up and down the menu, and is controlled both by the cursor keys and space, as well as the joystick. Option selected is returned in oopt%. NB QUIT MENU option = option one.

Line 10620 displays a version box at coord in x (y position is fixed). This can be altered as desired. Line 10700 needs to be supplied with the options that are defaulted to (ticked) when the program first runs, and when a new option is selected. Line 10810 displays the copyright and Drive no. messages at Y coord. This routine needs the address changing to work on a 464. Line 10830 is the notepad routine. Again a few alterations are needed for Amstrad 464's.

Patterns

A simple program that creates black and white kaleidoscope effects. A good bit of speed helps the effect.

Well done Nigel Myers of Bolton.

```

1 'Patterns
2 'Written by NIGEL MYERS
3 'Amstrad Action November 1988
4 'alter line 20..a=4 for striped lines
10 BORDER 5:INK 1,26:INK 0,0:c=25
20 MOVE x,0:DRAWR 0,400,1:MOVE 640-x,0:DRAWR 0,400,1:  

    IF x<=320 THEN a=2
30 MOVE 0,y:DRAWR 640,0,0:MOVE 0,400-y:DRAWR 640,0,0:x+a  

    :y=y+b
40 IF x>=640 THEN a=-2-INT(RND*14)
50 IF y>=400 THEN b=-2-INT(RND*14):INK 1,c:c=c-1:IF c<1 THEN  

    c=20+RND*6
60 IF y<=200 THEN b=2
70 GOTO 20

```

Program Notes

Not much to this. Line 10 sets up the border and ink colours. Lines 20-30 perform the actual drawing of the pattern, and lines 40-60 perform some decision making on the pattern. Finally, line 70 loops to line 20 to draw the next bit of the pattern.

```

Memkit

Mark Baldwin has hacked out a program to help out all you hackers in your hacking. It adds six new RSX's to Basic, and should help out when you're looking around memory, because it's much better than using PEEK and POKE.

These new commands consist of:

- |MDUMP, address, lines, rom
- Dumps the contents of RAM or a ROM to the screen from the given address.

The **lines** parameter is the number of lines to dump and must be in the range 0-255. (0 is treated as 255.) The upper **rom** number can be included.

● |MTYPE, address

Similar to |MDUMP: prints memory contents in Ascii format. Press any key to stop the dump.

● |MFILL, address, length, byte

Fills the contents of memory from the given **address** with the **byte** value. The length must be from 0-65535.

● |EMOVE, source, destination, length

Moves a block of code. The **source** is the start address, the **destination** is the target address and the **length** is the size of the block in bytes.

● |DOKE, address, integer

Places a 16 bit integer value in the the given **address**. Can handle values from 0-65535, and pokes them in low byte first, then high byte.

● |DEEK, address, @variable

reads a 16 bit value into an **integer** variable from the **address**. Declare the variable before you use the command!

Program Notes

This is a standard RSX loader. Line 10 reserves memory and then starts a looping procedure. Lines 20-50 continue this loop, with line 40 checking each line against the checksum at the end. Line 50 calls the machine code and clears the machine using NEW. The machine code DATA statements run from 60-250.

AA Buyers Guide

Part one:

Word processors, databases and spreadsheets

Databases

AtLast Plus

Rational Solutions **056681 511**
£39.95 • CPM+, 6128 only

• reviewed AA30

Powerful database that has developed into what users require. Data capacity is restricted only by disk size, and splitting fields into smaller pieces (elements) is supported. Printed output is impressive. Unfortunately calculations on fields is missing. Strongly recommended for sheer processing ability.

ATLAST PLUS

DATABASE PROGRAM FOR AMSTRAD PCW512, PCW512B,
 PCW512 AND CPCV728.

What they said about the ATLAST:
 Searchable indexes and fast recall. Subroutines
 available in the menu system.
 Mathematical functions, word processing features all
 particularly valuable.

to tie records together, saving space and time. Screen layouts and reports are menu selected and not for the faint-hearted, but results are good. Only field totals can be records, other calculations being unsupported.

Random Access Database

Minerva Systems **0392 37756**
£29.95 disk only • reviewed AA6

Very good mathematical and string operations make this a database to watch for. Random disk accessing gives speed combined with power – and you can opt for a 40 or 80 column screen. Can be a little unresponsive to keys.

Ultrabase

Beebugsoft **0727 40303**
£14.95 tape, £17.95 disk

• reviewed AA6

Keeps all data in memory, giving fast search and sort options but reduced capacity. Record format is fixed, making entry a little tiresome. Excellent price for a database, though, and featuring 'fuzzy logic' search option.

Masterfile III

Campbell systems **0378 77762**
£39.95 CPM+

• reviewed AA30

Possesses a genuinely useful feature – parent/child records, which enable you

Even so, Pendown lacks many features, and one day you're going to want to move up.

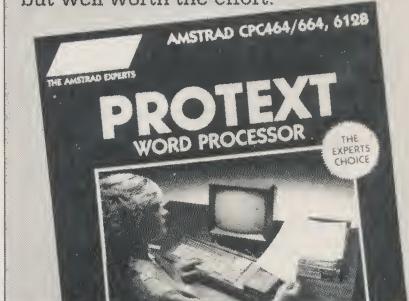

Protext

Arnor **0733 239011**
£19.95 tape, £26.95 disk, £39.95 ROM

• reviewed AA3

One of the first word-processors written especially for the Amstrad. Protext is lightning fast at all tasks involving the screen. True merging from separate files and disks to the cursor position is very easy, and the program supports standard CPC RSX's like DISC, TAPE, CAT etc.

Having software on ROM available at the touch of a key is excellent. Bad points: maximum file space is limited to machine memory – about 22K on disk and 38K for the ROM version. And a little daunting to get to grips with: but well worth the effort.

Word processors

Brunword 6128

Brunning Software **0245 252854**
£16.50 tape, £25 disk • reviewed AA24
 40 or 80 column mode; in-built spell checker loaded into extra memory. Can be used by expanded 128K machines. Superscript and subscript effects appear on-screen.

Some on-screen operations such as centering and cursor movement can be a little slow. And files cannot be loaded into other word-processors.

NewWord

Newstar **0277 229509**
£69.95 CPM+ • reviewed AA7
 Similar to Wordstar in many respects, and the two can swap documents. It is so big that two disk drives are needed to make the most of it. Again the manual is huge.

One of the more desirable features (and there are an awful lot of those) is the ability of the program to display printer font styles on screen. So you can tell just where you have left them on accidentally.

On the other side of the coin, this is just about the most expensive word-processor for the Amstrad. Packed with features, it runs at the same rather sluggish speed as Wordstar.

Pendown

Logotron, **£19.50 disk only**

• reviewed AA18

Pendown offers a complete tutorial in the theory and practice of the subject. It is a very open system, owing a lot to expensive DTP packages. Generally more people learn about the subject by means of Tasword: but Pendown is a lot more fun. Built into the product are different fonts to print with. You can't see them on screen but they make the end result much better.

Pyraword

Discovery **0742 753423**
£14.95 tape, £17.95 disk

• reviewed AA18

This program is similar in use to Pyradev, also from Discovery. When starting up it loads a profile of inks, printer codes and the character set. Word counting, changing disk drives etc – the housekeeping tasks of any program – are handily located. The program uses the extra memory of 128K machines for spooling printed documents and storing text.

Unfortunately true merging of files is not possible, and the control keys are a little strange at first. The margins cannot be set further apart than 80 columns, although placing a printer control character at the right hand side will allow wider documents to be printed.

Tasword

Tasman Software 0532 4388301
464, 464D, 6128, £19.95 tape, £24.95 disk

● reviewed AA1

A veritable herd of different releases. 464 is the tape based version, exactly the same as Amsword. 464D has a few enhancements for a disk drive. 6128 makes full use of a 6128's extra memory. The latter pair include a mailmerge facility as standard. If you are new to word-processing then this is worth a look. It is very easy to get to grips with and comprehensive help screens are available when needed.

Many people never find a need to change from *Tasword*. But the screen operations are fairly slow, and reformatting text is done one word at a time. If you want speed, look elsewhere.

Wordstar

Microp/Cumana 0483 571666
£49.95 disk only (CPM) ● reviewed AA1
'Pocket Wordstar' is what this really is. But anyone who has seen an incarnation of the real thing on a CPC can tell you it's a dinosaur. Be glad the faster *Pocket* version is available. One good feature: files can be as big as the space available.

A fully professional program, *Wordstar* has a manual bigger than some printers and a layout reminiscent of mission control. If you want a function, it is in there... somewhere. Not fast.

Mini Office II

Database Software 0625 879940
£14.95 tape, £19.95 disk ● reviewed AA6
If you don't need full specification *Mini Office II* is the one to buy. For what is a remarkably low price you get a word-pro-

cessor, database and a spreadsheet, plus other goodies such as comms software. Packaging and documentation good, and programs work in a menu environment. Worth considering if you're short of pennies (and who isn't?).

Spreadsheets

Cracker

Newstar Software 0277 229509
£49.95 disk CPM+ ● reviewed AA9
Spreadsheets must be created from scratch. Documentation well written; command sequences are soon learned. Mathematical functions very well catered for, and include random numbers. Files limited to 17K long - you soon run out of space, and formulae programming is not well implemented.

The Cracker user's manual

Mastercalc 128

Campbell Systems 0378 77762
£33 disk, 128K machines
● reviewed AA4

Can display two different parts of a

spreadsheet at the same time. Includes notepad and calculator. Easy to use, but the mathematical formulae can only consist of the four basic arithmetic options. It slows down as more data is entered.

Matrix

Audiogenic Software 0734 303663
£34.95 disk ● reviewed AA18
Uses disk to store data - hence good capacity but poor speed. Graphic options on *Matrix* shames other spreadsheets. On screen prompts are rare, making it hard going at first. Calculating power good.

Supercalc 2

Amsoft/Sorcim 0277 230222
£49.95 CPM+ ● reviewed AA4
Originally this program cost £200, but was soon cut. Documentation is first class. Calculations can be determinative, - they will be performed on whether or not a cell's contents match a given value. Help prompts plentiful if needed and arithmetic functions excellent.

AA Buyers Guide

Your CPC is alive. To make sure it's kicking subscribe to Amstrad Action. Now!

What's really going on in the CPC world? How do you know if you're really getting the most out of your CPC? How do you get hold of the best bargains? Get all the best advice, plus tactics and games hints, pokes and help which adds new life to your existing software collection and lets you make your future choices wisely: news, features, comms, the letters pages (!) - all this by subscribing to *Amstrad Action*.

For just £16.50 you'll get the next 12 issues delivered straight from the presses to your door. And in every one of them the chance to pick up bargains you'll never see repeated elsewhere.

But that's not all. To make sure you get a proper AA kick-off we're giving away one of these four US Gold games - your copy will arrive two days after your subscription order. **But there's more!** In a moment of pure folly we're throwing in a copy of Firebird's *Enlightenment* to those who choose tape rather than disk! In other words, subscribe, pick a game from the four listed below. If you want it on tape, you get *Enlightenment* thrown in free! We can't do more than that for you. But you have to want that machine to come alive. Contact us on (0458) 74011 or fill in the order form on the next page.

Do it now!

BIONIC COMMANDOS

Normal shop price £9.99 cass, £14.99 disk

- The Capcom coin-op conversion made fierce!
- Destroy the Doomsday weapon or be destroyed!
- Five levels, each with its own soundtrack
- Five multi-loads - this is a big game!
- Take out the world's worst ever dictator

DREAM WARRIOR

Normal shop price £9.99 cass, £14.99 disk

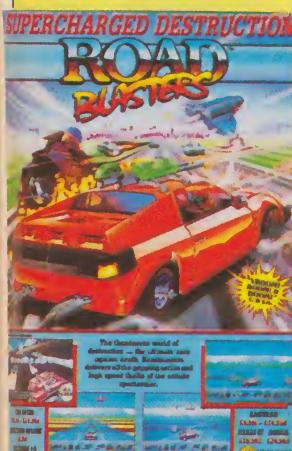

- Set in a dream where you must never wake up
- Go round collecting the sleeping pills to stay in the game
- Kill the monster at the end of your nightmare and you've won!

ROAD BLASTERS

Normal shop price £9.99 cass, £14.99 disk

- Faster than *Outrun*!
- Take it to the limit in your custom road warrior car

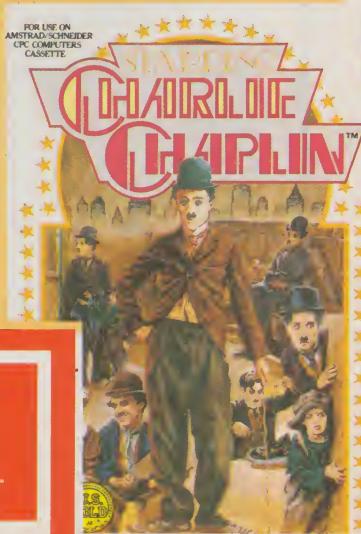

- Just blast everything else on the road and in the sky!
- Loads of sections!
- Loads of helicopters and death merchants out to get you if you can't play!

CHARLIE CHAPLIN

Normal shop price £9.99 cass, £14.99 disk

- A super game for everyone from 7 upwards
- Direct a movie and control the Stars!
- Select a script, shoot a scene, then edit it
- Show it to an audience and listen to them clap!

**ANY ONE OF THESE
PROGRAMS FREE WHEN YOU SUBSCRIBE!**

Firebird's ENLIGHTENMENT

(Druid II) - just £3.95 (RRP
£8.95)

**Just £3.95 -
only through
*Amstrad
Action!***

ENLIGHTENMENT, the game which subscribers get free of charge when they choose a tape rather than a disk game, is now available to all **Amstrad Action** readers for just £3.95. It's a Firebird game which was released in April of this year with the full title of *Enlightenment Druid II*. Complete with 22 page manual/initiation booklet, *Druid II* follows the quest for magical powers in the context of an icon-driven adventure which won praise from both adventurers and those more used to arcade action.

Definately a long-term project which will challenge your wisdom!
Order Code AA352

SPECIAL
OFFERS

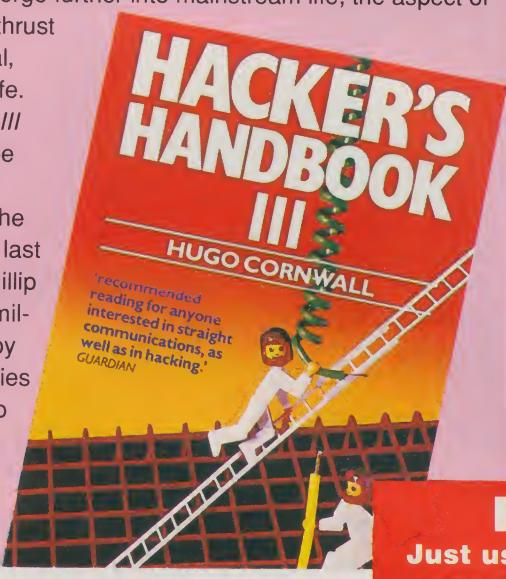

HACKERS HANDBOOK III

by Hugo Cornwall
£6.95 • Century Hutchinson

Here it is! The Know-All book about hacking - the art of exploring other people's computer systems - that will shock you with its frankness. When *The Hackers Handbook* first appeared in 1985 it caused a storm of interest and went straight into the best-seller lists because it revealed so much about the way computer systems across the world operate. This updated edition shows that as computers emerge further into mainstream life, the aspect of computer security has been thrust into the foreground of political, legal, military and business life.

Hackers Handbook III looks at modems, Prestel-type information systems and networks. It discusses some of the most famous incidents of the last ten years, from the Prince Phillip mailbox hack of 1984 to the millions of pounds that are lost by the banks and building societies annually. All together, a fabbo read which will get your brain twitching frantically!

Order Code AA343

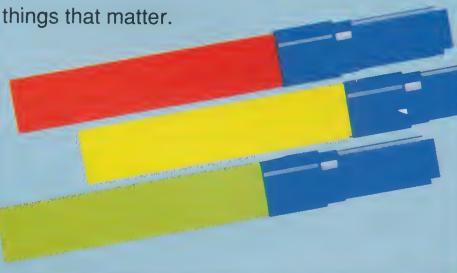

HIGHLIGHTER PENS

Three for £1.50

Anyone who uses computers a lot, can make use of highlighter pens. For marking the important lines in a document or printout or program listing. For ensuring a key sentence in a manual isn't forgotten. Or just for highlighting the main points in an Amstrad Action article.

We're offering a set of three different-coloured AA-stamped pens in a clear plastic wallet for just £1.50. They're high-quality and long-lasting. A good way of focussing attention on things that matter.

A VERY SPECIAL OFFER!

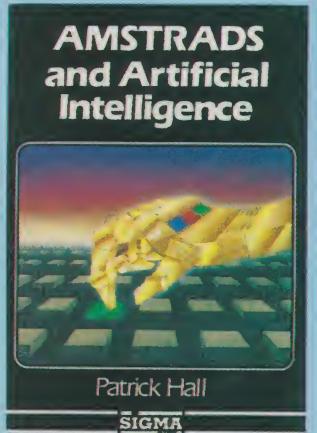

Amstrads and Artificial Intelligence by Patrick Hall

Just £1.95 (RRP £8.95!)

Published by Sigma Press, this book looks in detail at one of the most talked-about topics of our generation - artificial intelligence. Is it really possible to build a computer program that comes anywhere near the capabilities of the human brain?

Amstrads and Artificial Intelligence isn't a philosophy book though - it's a book that discusses the requirements of AI AND offers several program listings that allow you to start tackling the issues at the practical level. Didn't think you could get AI on your CPC? Well think again - then buy this book. Topics include expert systems, computer vision, robots and learning, game playing and knowledge representation. All this for just £1.95 - saving SEVEN POUNDS on the original price! An excellent book for anyone who owns a CPC and wants to take it further than ever before.

HOW TO ORDER

Just use the order form on the left hand page. Use the order numbers listed with the product, OR, for a subscription, look at the Subscriber Code box next to the Order Form.

Otherwise telephone us with your credit card details on 0458 74192 (24-hour answerphone).

ATLAST PLUS

CP/M database program for the CPC6128 for just £29.95 (RRP £39.95)

"Superb value for money and hard to pick holes in" we called the first version of *AtLast*. Now, with the release of *AtLast Plus* by Rational Solutions, you have the chance of buying one of the best (and probably the best for the 6128) databases for £29 - £10 less than the full retail price!

AtLast Plus runs under CP/M, and features include up to 32,000 records, ten files per database, 20 fields per record, 99 elements per field and up to 79 characters per element. User-definable report and screen layouts, full on-screen control of data entry, impressive indexing/sorting facilities and automatic data re-organisation are all included in this latest version. As well as this, unused data space is not saved to disk marking out *AtLast Plus* as an essential database for serious 6128 owners.

The package includes disk and full 120 page manual - altogether one of the most suitable programs for organising club-type membership lists, and unbeatable value for money - only through *Amstrad Action*.

BACK ISSUES

Expand your Amstrad Action collection!

If you're one of the thousands of readers who've joined *Amstrad Action* only recently, you'll want to catch up on some of the good things you've missed. Here's how to do it. We have limited numbers of the back issues listed below, which we're selling at cover price with post and packing free.

Issues 8 and 16 may be of particular interest, as both include free cassettes packed with good software. Two series also went down very well. Andy Wilton's programming course in Basic for absolute beginners ran from issues 8-17, while a series of articles on the CP/M operating system ran from 10-17.

All issues contain numerous game reviews, Type-Ins and Pokes, all making up the best in *Amstrad Action* past and present.

AA DUST COVERS

2-piece set only £6.95

Let's face it, computers don't like dust. Over a period of time it can make them very ill indeed: disk drives and cassette decks in particular can suffer serious, sometimes fatal damage.

A set of dust covers provides a neat solution. And there's the added bonus of smartening up the hardware's appearance when it's not in use.

The specially-commissioned *Amstrad Action* covers are made from high-quality, water (and coffee) proof PVC. They're coloured a gentle beige with smart blue trimming and matching AA logo.

You can order a 2-piece set tailor-made for your CPC system – just choose the correct order code from the list next to the order form.

SPECTRUM

A Foul Move

BECOME THE WORLD CHAMPION – BY FAIR MEANS OR FOUL

A realistic boxing simulation. You can even cheat... if the ref's not looking!

You're behind on points and time is running out. The ref looks half asleep. A quick head butt and a sly punch below the belt and your opponent is toppling over. But as he falls, his knee strikes you a paralysing blow. "Foul" shouts the crowd, and your opponent is disqualified.

You've won, but in the next championship contest you meet a boxer who knows more dirty tricks than you. It needs skill and cunning, lightning responses and deadly strategy. Have you got what it takes to become the World Champion – By Fair Means or Foul?
